APPLICATION GUIDELINES

In accordance with Arizona Revise Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 14 may be available from your driller.
4. Information to complete items 10 and 13 may be available from your County Assessor's Office.
5. An exempt well, referred to in Item 11, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute used primarily for domestic purposes, including the noncommercial irrigation of less than two acres of land.
6. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
7. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
8. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
9. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
10. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
11. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention, the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling company. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, including abandonment, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Registration No. 55-577927
File No.D(24-24) 2 CBB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sylvia Valdez
Water Resource Technician

19	150	7⅞	10	110	6¼		X			X						
			110	150	6¼		X							X		

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Registration No. 55- 594938
File No. D(24-24) 13 ACB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Toni Bergeman

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

EXEMPT WELL
FILING FEE: $3.00

DEPARTMENT OF WATER RESOURCES
NOTICE OF INTENTION TO DRILL OR DEEPEN AN EXEMPT WELL

EXEMPT WELL

Section 45-596, Arizona Revised Statutes, provides: A person may not drill or cause to be drilled any well or deepen or replace an existing well without first filing a Notice of Intention to Drill with the Department on a form prescribed and furnished by the Department. The well shall be completed within one year after the date of Notice. An exempt well means a well having a pump with a maximum design capacity of not more than 35 gallons per minute which is used to withdraw ground water. An exempt well may include the non-commercial irrigation of not more than 1 acre of land.

COMPLETION REPORT

1. A Completion Report is to be filed with the Department within 30 days after installation of pump equipment.

2. The tested pumping capacity of the well in gallons per minute for a nonflowing well should be determined by measuring the discharge of the pump after continuous operation for at least four hours and for a flowing well by measuring the natural flow at the land surface.

3. Drawdown of the water level for a nonflowing well should be measured in feet after not less than four hours of continuous operation and while still in operation and for a flowing well the shutin pressure should be measured in feet above the land or in pounds per square inch at the land surface.

4. The static groundwater level should be measured in feet from the surface immediately prior to the well capacity test.

LOCATION OF THE WELL:

T24S R24E Sec5 NW NW NW

Date Well Completed 3/15/81 Depth of Well 330

1. Well Test:
Test Pumping Capacity 6 GPM (Gallons per minute) Date Well Tested 3/20/81

Method of Discharge Measurement 5 gal Container (Weir, orifice, current meter, et cetera)

Static Groundwater Level 110' ft Drawdown 210' ft

Total Pumping Lift 320 ft Drawdown (Flowing well) lbs

2. Equipment Installed:

Kind of Pump Submersible (Turbine, Centrifugal, et cetera)

Kind of Power Elec. (Electric, Natural, Gas, et cetera) Horse Power Rating of Motor 1 hp

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

Registration No. 55-212268
File No. D(23-24) 32 ACD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Danita Haywood

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

20	340	8	0	280	6 5/8		X			X						
			280	340	6 5/8		X							X		

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Registration No. 55-215509
File No. D(24-24) 11 CDB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Monica Phillips

Notice of Intent to
Drill, Deepen, Replace or Modify a Well
(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

1. Name of Registrant:
Charles H. Chase and Muriel W. Chase
6445 N. Placita Pequena (Address) Tucson (City) AZ (State) 85718 (Zip)

2. File and/or Control Number under previous groundwater law: Previous owner does not possess this information.
(File Number) 35- (Control Number)

3. a. The well is located within the NW¼ NW¼ SW¼, Section 18, of Township 24 N(S), Range 24 E(W), G & SRB & M, in the County of Cochise.

b. If in a subdivision: Name of subdivision Naco Townsite, Lot No. Lots 2,3,4,5 and 6 (Naco lots are 25' in width), Address Block 68 102-57.

4. The principal use(s) of water (Examples: irrigation - stockwater - domestic - municipal - industrial)
The only use of this well would be for a garden, if and when we ever build anything on this property.

5. If for irrigation use, number of acres irrigated from well 1/4 acre or less.

6. Owner of land on which well is located. If same as Item 1, check this box ☒
(Address) (City) (State) (Zip)

7. Well data (If data not available, write N/A)
a. Depth of Well 100 feet, more or less. feet
b. Diameter of casing 4 inches
c. Depth of casing 90 to 100 feet feet
d. Type of casing N/A .
e. Maximum pump capacity 15 gallons per minute.
f. Depth to water N/A feet below land surface.
g. Date well completed 1970, approx. (Month) (Day) (Year) .

8. The place(s) of use of water. If same as Item 3, check this box ☒.
____¼ ____¼ ____¼, Section ____ Township ____ Range ____
____¼ ____¼ ____¼, Section ____ Township ____ Range ____
Attach additional sheet if necessary.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

Registration No. 55- 593116
File No. D(23-24) 35 CBD

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended drilling card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Toni Bergeman

To: Well Owners and Licensed Well Drillers

Re: Variance to substitute the use of qualified thermoplastic casing for steel casing required by rule A.A.C. R12-15-811(B)(1) in the upper 20 feet of a well's surface seal.

The Arizona Department of Water Resources (ADWR) has received your NOI form(s) that indicate that you are applying for a variance to substitute the use of qualified thermoplastic casing for steel casing in the upper 20 feet of the well(s) surface seal.

ADWR approves the request for the following variance:

- Thermoplastic inner casing (riser) with a watertight cap may be used in lieu of steel [A.A.C. R12-15-811(B)(1)].

The following *special requirements* are conditions for this variance (A.A.C. R12-15-821):

- This variance only applies for the construction of qualified exploration wells, monitor wells, piezometer wells or vadose zone wells, as defined in A.A.C. R12-15-801.
- The thermoplastic casing shall be installed only in an oversized borehole without driving, and the well shall be completed below land surface in a vault.
- The PVC inner casings (risers) shall comply with ASTM Standard Guide D5092, Section 6.5.
- The wells shall be constructed per the "Variance Granted" Notice of Intention to Drill.
- The wells shall be abandoned (decommissioned) per A.A.C. R12-15-816.

As a reminder, pursuant to A.A.C. R12-15-811(H)(2), monitor wells shall be identified as such on the vault cover or at the top of the steel casing. Identification information shall include the well registration number.

Any questions should be directed to me at 602-417-2400, x7330.

Sincerely,

Frank Corkhill

Assigned Referenced Number: 55-593116

Dear Applicant:

The Department of Water Resources recently received your Notice of Intent to **Drill, Deepen, Replace, or Modify A Well**. However, our review indicates that the filing(s) is incomplete under the Groundwater Management Act for the following reason(s):

An original signature is required

PLEASE CALL TONI BERGEMAN AT 602-417-2400 EXT. 7148 WITH ANY QUESTIONS.

In accordance with A.R.S § 45-596; Paragraph D, this application is being returned as a "statement of determination", requesting information necessary to make it correct and complete. If the necessary information is not received by the Department within sixty (60) days, the application may be denied. You would then have to re-initiate the N.O.I. process to receive a drilling authority for this location. If you have any questions, please contact the Groundwater Management Support Section at (602) 417-2470. **ATTACH THIS CHECK LIST WHEN RESUBMITTING THE COMPLETED NOTICE OF INTENT AND RETURN TO BOX 458, PHOENIX, ARIZONA 85004-3003. YOU MAY ALSO CONTACT YOUR DRILLER OR COUNTY ASSESSORS OFFICE FOR ASSISTANCE PERTAINING TO THE NECESSARY INFORMATION THAT IS REQUIRED TO COMPLETE YOUR APPLICATION.**

DRILLING CARD

THIS AUTHORIZATION SHALL BE IN POSSESSION OF THE DRILLER DURING ALL DRILLING OPERATIONS

WELL REGISTRATION NO: **55-906823**

AUTHORIZED DRILLER: **YELLOW JACKET DRILLING SERVICES L L C** LICENSE NO: **78**

NOTICE OF INTENT TO **DRILL A MONITOR WELL** HAS BEEN FILED WITH THE DEPARTMENT BY:

WELL OWNER: **City of Bisbee**

ADDRESS: **118 Arizona Street, Bisbee, AZ, 85603**

THE WELL(S) IS/ARE TO BE LOCATED IN THE:

SW 1/4 of the **NE** 1/4 of the **NE** 1/4 Section **13** Township **24 S** Range **23 E**

NO. OF WELLS IN THIS PROJECT: **1** ASSESSOR'S PARCEL NO: **102-34-005A**

THIS AUTHORIZATION EXPIRES AT MIDNIGHT ON THE DAY OF **4/14/2008**

THE DRILLER MUST FILE A WELL DRILLER REPORT AND WELL LOG WITHIN 30 DAYS OF COMPLETION OF DRILLING

This drilling or abandonment authority was granted based upon the certifications made by the above-named Driller in the notice of intent to drill or abandon. Those certifications, along with any variances granted, are listed below. By drilling or abandoning the well pursuant to this authorization, the above-named driller acknowledges the accuracy of the driller certifications. If the certifications are in error, this authorization is invalid and driller must contact the Department of Water Resource's NOI Section in writing at the address above to correct.

Variance(s) Granted To Driller: **None**

Certification(s) Made By Driller:

- ☑ By checking this box, I certify that I have all necessary Registrar of Contractor (ROC) licenses in all necessary license categories for this drilling or abandonment project and that those licenses are current.
- ☑ If the landowner and the well owner are not the same, by checking this box, I certify that I have obtained written approval from the landowner in order to conduct this drilling or abandonment project. A copy of the written approval shall be submitted to ADWR with the Well Driller Report and Well Log or Well Abandonment Completion Report within 30 days of completion of drilling or abandonment.
- ☑ By checking this box, I certify that this NOI application is not an application to replace, deepen, or modify an existing well.
- ☑ By checking this box, I certify that I have been authorized by the above-named well owner to submit this Notice of Intent on the well owner's behalf.
- ☑ By checking this box, I certify that the information above is complete and correct, and that the well shall be drilled or abandoned in compliance with all pertinent statutes and rules, including any special standards that may be required to protect the aquifer or other water sources.

Herbert R. Guenther
Director

City of Bisbee
118 Arizona Street
Bisbee, AZ, 85603

Registration No. 55- 906823
File No. D(24-23)13 AAC

Dear Applicant:

Enclosed is a copy of the Notice of Intent to Drill a Monitor/Piezometer/Environmental Well ("NOI") which you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed (or otherwise provided) a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card which he must keep in his posssession at the well site during drilling. Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling.

If it is necessary to change the location of the proposed well, you may not proceed with drilling until you file a new NOI with the Department and the Department issues an amended drilling card to the driller. If you change drillers, you must notify the Department of the new driller's identity. A new driller may not begin drilling until he receives a new drilling card from the Department. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report filed as required by A.A.C. R12-15-816(F).

A.R.S. § 45-600 requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR Form 55-55) with the Department within 30 days after completion of drilling. That form was mailed to your driller with the drilling card.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at
http://www.azwater.gov/dwr/Content/Find_by_Category/Permits_Forms_Applications/default.htm.

THIS AUTHORIZATION SHALL BE IN POSSESSION OF THE DRILLER DURING ALL DRILLING OPERATIONS

WELL REGISTRATION NO: **55-903984**

AUTHORIZED DRILLER: **YELLOW JACKET DRILLING** LICENSE NO: **78**

NOTICE OF INTENT TO **DRILL A MONITOR WELL** HAS BEEN FILED WITH THE DEPARTMENT BY:

WELL OWNER: **City of Bisbee**

ADDRESS: **118 Arizona Street, Bisbee, AZ, 85603**

THE WELL(S) IS/ARE TO BE LOCATED IN THE:

NE 1/4 of the **NE** 1/4 of the **SE** 1/4 Section **18** Township **24S** Range **24 E**

NO. OF WELLS IN THIS PROJECT: **1** ASSESSOR'S PARCEL NO: **102-55-002**

THIS AUTHORIZATION EXPIRES AT MIDNIGHT ON THE DAY OF **1/10/2007**

THE DRILLER MUST FILE A WELL DRILLER REPORT AND WELL LOG WITHIN 30 DAYS OF COMPLETION OF DRILLING

This drilling or abandonment authority was granted based upon the certifications made by the above-named Driller in the notice of intent to drill or abandon. Those certifications, along with any variances granted, are listed below. By drilling or abandoning the well pursuant to this authorization, the above-named driller acknowledges the accuracy of the driller certifications. If the certifications are in error, this authorization is invalid and driller must contact the Department of Water Resource's NOI Section in writing at the address above to correct.

Variance(s) Granted To Driller:

- Thermoplastic Casing Surface Seal Variance in upper 20' of well.
- Well Screen > 10' Variance – Monitor well's screen may be screened greater than 10 feet above the highest seasonal static water level.

Certification(s) Made By Driller:

- ☑ By checking this box, I certify that I have all necessary Registrar of Contractor (ROC) licenses in all necessary license categories for this drilling or abandonment project and that those licenses are current.
- ☑ If the landowner and the well owner are not the same, by checking this box, I certify that I have obtained written approval from the landowner in order to conduct this drilling or abandonment project. A copy of the written approval shall be submitted to ADWR with the Well Driller Report and Well Log or Well Abandonment Completion Report within 30 days of completion of drilling or abandonment.
- ☑ By checking this box, I certify that I have read the applicable substantive policy statement regarding each variance that I am requesting, and that I shall comply with all of the requirements set forth therein.
- ☑ By checking this box, I certify that this NOI application is not an application to replace, deepen, or modify an existing well.
- ☑ By checking this box, I certify that I have been authorized by the above-named well owner to submit this Notice of Intent on the well owner's behalf.

Director

City of Bisbee
118 Arizona Street
Bisbee, AZ, 85603

Registration No. 55- 903984
File No. D(24-24)18 DAA

Dear Applicant:

Enclosed is a copy of the Notice of Intent to Drill a Monitor/Piezometer/Environmental Well ("NOI") which you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed (or otherwise provided) a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card which he must keep in his posssession at the well site during drilling. Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling.

If it is necessary to change the location of the proposed well, you may not proceed with drilling until you file a new NOI with the Department and the Department issues an amended drilling card to the driller. If you change drillers, you must notify the Department of the new driller's identity. A new driller may not begin drilling until he receives a new drilling card from the Department. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report filed as required by A.A.C. R12-15-816(F).

A.R.S. § 45-600 requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR Form 55-55) with the Department within 30 days after completion of drilling. That form was mailed to your driller with the drilling card.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at
http://www.azwater.gov/dwr/Content/Find_by_Category/Permits_Forms_Applications/default.htm.

DRILLING CARD

THIS AUTHORIZATION SHALL BE IN POSSESSION OF THE DRILLER DURING ALL DRILLING OPERATIONS

WELL REGISTRATION NO: **55-903992**

AUTHORIZED DRILLER: **YELLOW JACKET DRILLING** LICENSE NO: **78**

NOTICE OF INTENT TO **DRILL AN EXEMPT WELL** HAS BEEN FILED WITH THE DEPARTMENT BY:

WELL OWNER: **City of Bisbee**

ADDRESS: **118 Arizona Street, Bisbee, AZ, 85603**

THE WELL(S) IS/ARE TO BE LOCATED IN THE:

NE 1/4 of the **SW** 1/4 of the **NW** 1/4 Section **09** Township **24 S** Range **24 E**

NO. OF WELLS IN THIS PROJECT: **1** ASSESSOR'S PARCEL NO: **102-36-015F**

THIS AUTHORIZATION EXPIRES AT MIDNIGHT ON THE DAY OF **1/11/2007**

THE DRILLER MUST FILE A WELL DRILLER REPORT AND WELL LOG WITHIN 30 DAYS OF COMPLETION OF DRILLING

This drilling or abandonment authority was granted based upon the certifications made by the above-named Driller in the notice of intent to drill or abandon. Those certifications, along with any variances granted, are listed below. By drilling or abandoning the well pursuant to this authorization, the above-named driller acknowledges the accuracy of the driller certifications. If the certifications are in error, this authorization is invalid and driller must contact the Department of Water Resource's NOI Section in writing at the address above to correct.

Variance(s) Granted To Driller: **None**

Certification(s) Made By Driller:

- ☑ By checking this box, I certify that I have all necessary Registrar of Contractor (ROC) licenses in all necessary license categories for this drilling or abandonment project and that those licenses are current.
- ☑ By checking this box, I certify that the proposed well site is not within 100 feet of any septic tank system, sewage disposal area, landfill, hazardous waste facility, storage area of hazardous materials or petroleum storage areas and tanks.
- ☑ By checking this box, I certify that this NOI application is not an application to replace, deepen, or modify an existing well.
- ☑ By checking this box, I certify that I have been authorized by the above-named well owner to submit this Notice of Intent on the well owner's behalf.
- ☑ By checking this box, I certify that the information above is complete and correct, and that the well shall be drilled or abandoned in compliance with all pertinent statutes and rules, including any special standards that may be required to protect the aquifer or other water sources.

Janet Napolitano
Governor

Herbert R. Guenther
Director

Registration No. 55-903992
File No. D(24-24)9 BCA
Dear Applicant:

Enclosed is a copy of the Notice of Intent to Drill a Well ("NOI") which you recently filed with this Department pursuant to A.R.S. §45-596. This is to inform you that the Department has approved the NOI and has mailed (or otherwise provided) a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card which he must keep in his possession at well site during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the well, you may not proceed with drilling until you file a new NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the new NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at
http://www.azwater.gov/dwr/Content/Find_by_Category/Permits_Forms_Applications/default.htm.

RE: Registration No. 55-570012
File No. D(23-24) 25 CCC

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

1.0 INTRODUCTION

This report presents the results of our preliminary analysis of the water supply potential of Phelps Dodge Corporation's Copper Queen Mine (CQM) in the Warren Mining District near Bisbee, Arizona. The scope of work consisted of the following tasks:

Task 1 – Compilation and Review of Available Data
Task 2 – Characterization of Ground Water and Surface Water Conditions
Task 3 – Assessment of the Amount and Quality of Ground Water Available from the CQM and the Hydrogeologic Relationship between the CQM and the Upper San Pedro River

The study relied on existing data including published reports by federal and state agencies, data from Phelps Dodge and from Southwest Ground-water Consultants, Inc. files. No field studies were conducted.

2.0 CONCLUSIONS

This section summarizes the study conclusions. Subsequent sections discuss the basis for these conclusions.

2.1 WATER SUPPLY FROM COPPER QUEEN MINE

The 80-year history of pumping from the underground workings provides the best indication of the long-term yield of the limestone aquifer within the CQM area. Historic pumpage records show that ground water production declined even though the workings were being deepened and expanded indicating that while the mine and surrounding limestone rock mass were being dewatered, groundwater was moving across the various faults bounding the mine area but at an insufficient rate to maintain a constant pumping rate. In 1976 the mine workings were all open and the monthly average pumpage for the year was 3,270 gpm, of which approximately 695 gpm was recirculated leach water. Excluding an event such as the 1978 hurricane and associated flooding, long-term ground-water production from the CQM appears to be approximately 2,500 gpm (4,000 ac-ft/yr).

If pumpage from the mine is resumed, almost all the water will initially come from storage in the mine workings. However, as the water level in the limestone rock mass declines, ground water will move across the faults bounding the CQM in response to the head difference created by pumping. Over time, pumped water will be a combination of stored water within the mine area and ground water from the surrounding area.

The amount of water available overtime is dependent on the specific yield (S_y) of the limestone rock mass and the number of shafts that are pumped. The estimated 25-year pumping rates, in gpm, are given in the following table. Water production under columns labeled Campbell and Denn assume that both of these shafts are pumped simultaneously, while the columns labeled Denn assume only the Denn shaft is being pumped.

Pumping Period (yrs)	**Pumpage (gpm) Campbell and Denn ($S_y = 0.02$)**	**Pumpage (gpm) Denn ($S_y = 0.02$)**	**Pumpage (gpm) Campbell and Denn ($S_y = 0.05$)**	**Pumpage (gpm) Denn ($S_y = 0.05$)**
1-4	8,000	6,500	8,000	8,000
5-10	7,000	5,000	8,000	7,000
11-15	5,500	4,000	8,000	6,000
16-20	3,500	3,000	8,000	5,000
21-25	3,500	2,500	8,000	4,500

This analysis indicates that there is a benefit of distributing the pumping over the mine area to reduce the concentration of drawdown at one shaft. It also shows the effect of assumptions about specific yield on the rate of decline in pumpage over time.

2.2 WATER QUALITY FROM THE COPPER QUEEN MINE

Water quality varies within the Warren Mining District. The water sampled from the Junction shaft (1990) and C&C shaft (1996) of the CQM is a mix of water from throughout the underground workings. This water is somewhat acidic, with an average pH of 6.1. Total dissolved solids (TDS) and sulfate are approximately 8,000 mg/l and 5,500 mg/l, respectively, in the Junction Shaft. TDS are approximately 1,080 mg/l to 1,500 mg/l in the C&C Shaft (sulfate data are not available). Water quality is reported to be poorer in the western part of the district but better to the east and south.

Over time, pumping from any of the existing shafts will likely draw water from throughout the underground workings and water quality can be expected to be a blend of ground water from the District. For purposes of this study, it is assumed that the average water quality will approximate the quality of water sampled from the CQM's Junction Shaft.

2.3 IMPACTS ON OTHER WATER USES

A total of 5 non-Phelps Dodge-owned water supply wells are located within the potential area of influence of pumpage from the CQM. Of these only one well (Paulovich) may tap the limestone aquifer, the other wells appear to produce from perched aquifers overlying the limestone aquifer. The Paulovich well was drilled in 1982 while the mine was still being dewatered, indicating that its production would not likely be impacted by future pumpage.

Perennial reaches of the San Pedro River start south of Hereford, Arizona approximately 12 miles west of the CQM. Base flow in the San Pedro River is reportedly maintained by tributary ground-water discharge from the regional basin-fill aquifer and Holocene alluvium (Pool, 1999). Water pumped from CQM area is from Paleozoic limestones that are bounded by low permeability faults. Pumpage from the CQM will have no direct effect on water levels in the regional aquifer or the Holocene alluvium that reportedly supplies base flow to the San Pedro River.

Given the fact that ground-water levels are generally higher in the CQM area than adjacent to the San Pedro River it could be argued that water "captured" within the area of mine dewatering is tributary ground-water that would ultimately flow into the regional aquifer. Under this scenario ground-water would have to fully recharge the dewatered mine area and overcome the existing ground-water divide in the Warren area, before it would theoretically move from the CQM area through the Naco-Bisbee Basin to the regional aquifer in the Sierra Vista subwatershed of the Upper Verde River and then discharge to the San Pedro River near Hereford. Also, given the geology of the Warren Mining District and CQM any water movement would be impeded by low permeability faults separating the limestone aquifer beneath the CQM from the basin-fill aquifer in the Naco-Bisbee Basin. In addition, the potential area of "capture" of approximately 22 square miles is less than 1.5 percent of the total area of the Sierra Vista subwatershed.

Based on the foregoing, pumpage of 2,500 gpm (4,000 ac-ft/yr) from the CQM will have no measurable effect on base flow in the San Pedro River.

3.0 HYDROGEOLOGY

3.1 STUDY AREA

The study area included the Warren Mining District and the Sierra Vista subwatershed of the Upper San Pedro River. Location of the study area is shown on Figure 1.

The study area is within the Mexican Highland section of the Basin and Range physiographic province. It is characterized by valleys containing basin-fill materials separated by elongated fault block bounded mountain ranges. The Warren Mining District contains the Phelps Dodge Copper Queen Mine. The district and mine are located on the southwestern flank of the Mule Mountains near Bisbee, Arizona.

Copper ore bodies within the Warren Mining District were discovered in 1877 and were mined more or less continuously until the early 1980's. From the start of mining until the mid-1970's a portion of the ore production was from underground mines in the Paleozoic limestones that underlie the District (Bryant, 1966). Open pit mining started in 1917 with the excavation of the Sacramento pit. Mining in this pit ceased in 1930. In 1952 open pit mining was reinstated with the opening of the Lavender pit and expansion of the Sacramento pit. These pits produced ore from the igneous granitic rocks that were intruded into the older limestones. Open pit mining ceased in 1974. All active mining stopped in 1984; however, leaching of stockpiles continues to the present.

3.2 GEOLOGY

3.2.1 Warren Mining District

The Mule Mountains are comprised of a complexly faulted series of Precambrian to Cretaceous age sedimentary rocks intruded by Jurassic-age granite and quartz porphyry rocks. In the Bisbee area, these rocks are host to significant copper, gold and silver mineralization of the Warren Mining District (Ransome, 1904).

The Dividend Fault which trends east-west generally separates Paleozoic limestones on the south from Precambrian metamorphic rocks and Cretaceous limestones, conglomerates and intrusives to the north. This fault has a normal displacement of up to 5,000 feet (Bryant, 1966). A sub-parallel fault, the Bisbee West Fault, located approximately two miles south of the Dividend Fault appears to be the southern limit of significant mineralization. The Quarry Fault on the west and the Black Gap Fault on the east

approximately define the east-west extent of major mineralization. In addition, the ore bodies are cut by numerous northeast-southwest trending faults. Major geologic units and structures are shown on Figure 2. Cross-sections are shown on Figure 3.

3.2.1 Upper San Pedro River Basin

The Sierra Vista subwatershed of the Upper San Pedro River Basin extends from the international boundary with Mexico to near Fairbank, Arizona. The basin is an elongated down-dropped trough that trends north-northeast. It is bounded by mountain blocks comprised of granite, schist, gneiss, volcanics and consolidated sedimentary rocks ranging in age from Precambrian to Tertiary (Barnes, 1997). The basin is filled with unconsolidated to semi-consolidated sediments. The Tertiary Pantano Formation unconformably overlies the bedrock (which includes the Paleozoic limestone host rocks of the Warren Mining District). The Pantano formation is a poorly to moderately indurated conglomerate. Overlying the Pantano formation are basin-fill deposits of Tertiary and Quaternary age.

Basin-fill deposits are divided into lower and upper units. The lower unit consists of lenticular, strongly to weakly cemented gravel, sandstone, siltstone and clay. This unit reaches a thickness of up to 1,000 feet in the center of the basin. The upper basin-fill is composed of weakly cemented beds of gravel, sandstone, siltstone and clay with a maximum thickness of about 800 feet. The upper basin-fill trends to well-bedded silt, sandy-silt and clay in the center of the basin, grading to clayey-silty gravel near the mountain fronts. Along the San Pedro River and major tributaries flood-plain alluvium (Holocene age) is deposited on the upper basin-fill sediments (Barnes, 1997). The basin-fill is the regional aquifer in the Upper San Pedro River valley.

Within the Sierra Vista subwatershed, the area closest to the Warren Mining District is the Naco-Bisbee Basin, located south of the District between Bisbee and the U. S.-Mexico International border. This basin is drained by Greenbush Draw and underlain by basin-fill deposits overlying sandstone, siltstone, conglomerate and limestone, in decending order, of the Morita Formation and Glance Conglomerate of Cretaceous age and the Martin, Abrigo and Escabrosa formations of Cambrian to Mississippian age (S.E.T., 1998). Major hydrogeologic features within the Sierra Vista subwatershed of the Upper San Pedro River Basin are shown on Figure 4.

3.3 CLIMATOLOGY

Precipitation at Bisbee averages 17.66 inches per year, with about 46% falling in July and August. The driest months of the year are March and April, with average monthly precipitation of 0.32 inches. Potential evapotranspiration in the study area is estimated to range from 59 to 67 inches per year (Yitayew, 1990).

3.4 SURFACE WATER

Streamflow in the much of the study area is ephemeral. The exception is some reaches of the San Pedro River from just south of Hereford to north of Charleston where the river is considered intermittent or perennial. The portion of the river that is perennial varies from year to year depending on climatic conditions. Reaches south of Charleston with perennial flow in 2003 are shown on Figure 4.

The San Pedro River originates about 30 miles south of the U.S.-Mexico International border and enters the United States near Palominas (Figure 1). Total area of the Sierra Vista subwatershed of the San Pedro River is about 1,600 square miles, of which 650 square miles are within Mexico.

Average annual streamflow at the USGS stream gage at Palominas is 30.4 cfs (1950-1996) and at Charleston is 56.4 cubic feet per second (cfs) over the period of record (1904-1996). Maximum streamflow occurs in July and August as a result of summer thunderstorm activity. Base flow at Charleston has been estimated for winter (November 15 - December 15) and summer (June) periods. Exclusive of years with high runoff, the average winter baseflow is 10.9 cfs and the summer baseflow is 2.9 cfs (Pool, 1999).

3.5 GROUND WATER

Ground water occurs throughout the study area. Rainfall in the Mule Mountains, Huachuca Mountains and Tombstone Hills is the principal source of recharge to the study area. Except where altered by pumping, the ground-water surface generally follows the topographic surface. Ground water occurrence and availability in the Warren Mining District and the adjacent Sierra Vista subwatershed of the Upper San Pedro River Basin are discussed in the following subsections.

3.5.1 Warren Mining District

Ground water was encountered in the limestone host rocks (Martin, Abrigo and Escabrosa formations of Cambrian to Mississippian age) of the underground mines in the early 1900s. By 1907 pumps were installed to dewater the mine workings. Figure 5 shows average annual water production (gpm) from the Copper Queen mine underground workings from 1907 to 1987.

The principal purpose of the pumping was to maintain dry working conditions; however, the water also met the mines' water supply needs. Water was collected and removed from the mines in a complex underground system of pipes, ditches and pumps that were interconnected across many mine levels and shafts. The mine dewatering and water control system is shown schematically on Figure 6.

3.5.1.1 – Historic Pumpage

Historic pumpage from the underground workings is shown on Figure 5. Pumpage can be divided into three periods as mine development progressed. These are identified on Figure 5 as I, II and III and are discussed below.

Period I - 1906 to 1935 was characterized by relatively shallow (<1,500 feet below ground surface (bgs)) mining in the western portion of the district. As water was encountered in new workings, water flow increased until the new area was dewatered, and then declined until another water area was encountered. As the mines expanded the total flow rate expanded slowly.

Period II - The Junction Shaft was sunk in 1933 and completed to a total depth of 2,710 feet in 1934. Between 1934 and 1935 approximately 8.7 miles of workings were developed below the 2200 level. As the mine expanded to the east, across the Campbell fault, water flow increased rapidly. In 1941, the 2700-12 Cross-Cut encountered high water flows, flooding the mine to 123 feet above the 2566 level. From 1942 to 1961 the mines were deepened and expanded to the east. In 1960, the Black Gap fault was penetrated and high water pressures were encountered. The workings were sealed to prevent flooding. The Campbell Shaft was sunk to its final depth (3,333 ft) in 1961 (Phelps Dodge, 1997). In spite of the deepening and expansion of the underground workings during this period, water pumpage decreased steadily once the initial flooding was overcome.

Period III – Leaching of the Sacramento and Lavender open pit mines started in 1976 and continued through the mid-1980s. During this period water pumped from the 1800 level included water that was being recirculated from leaching of the open pits to the

underground workings. In 1984 average monthly pumping rate was about 3,815 gpm. Of this amount 695 gpm was acid water recirculated from the pit leaching operation (SGC, 1997). In 1978, the Bisbee area was inundated with rainfall from a nearby hurricane. The mine workings were flooded as water ran into the open pits and from there to the underground workings.

In 1985, pumps were removed from the 3100 level of the Campbell and 2700 level of the Junction shafts. In 1986, pumpage ceased at the 2200 level of the Junction shaft and in 1987 all pumpage stopped. By the end of 2003, the water level had risen over 1,000 feet to within 865 feet of the Junction Shaft collar. Water level rise over time is shown on Figure 7.

3.5.1.2 – Aquifer Parameters

The majority of the mine workings are in limestone (Abrigo, Martin and Escabrosa formations). There are no known formal well tests to estimate aquifer parameters in these formations in the Warren Mining District. However, the long pumping history from the underground mines provides means of estimating of the ability of these rocks to yield water.

Estimates of the mass rock transmissivity were made by applying two separate techniques. One technique involved the calculation of specific capacity (gallons per minute per foot of drawdown) of the mine workings. The total drawdown in the water table due to mine dewatering was estimated by subtracting the elevation (1,728 ft msl) of the lowest mine level (3100 level) from the static pre-mining water level, estimated to be 4,335 feet (Dames & Moore, 1990), or 2,607 feet. Dividing the 1984 average monthly pumping rate, less acid water recirculation, (3,815 gpm - 695 gpm - see Section 3.5.1.2) of 3,120 gpm by 2,607 feet gives a specific capacity of 1.2 gpm/ft. Multiplying this number by 1,500 (an empirical factor for converting specific capacity to transmissivity) yields an estimated transmissivity of 1,763 gpd/ft.

A second technique used the Theis water level recovery method applied to the water level recovery in the Junction Shaft to estimate transmissivity. This method yielded an estimated range in transmissivity of between 1,430 and 10,970 gpd/ft.

While these calculations are based on the mathematics of well hydraulics and can only be considered "guesstimates" of the transmissivity of the limestones, they do indicate that the ability of the limestones to yield water is relatively low. Individual wells, given their relatively small diameter and limited ability to intersect multiple fractures, (as compared to miles of underground workings intersected in the shafts), would likely produce at relatively low rates.

3.5.1.3 – Ground-Water Movement

Ground-water movement in the Warren Mining District is controlled by the orientation of fractures and faults. Most faults appear to act as aquitards, or partial barriers to ground-water flow. Figure 2 shows water levels in monitor wells and shafts in 1996 and indicates the direction of ground-water flow. In the area of the mine workings the water table is depressed due to past mine dewatering. The water table is essentially flat in the area of the ore bodies, a reflection of the "permeability" created by the mine workings.

Steep gradients occur to the west and east of the central mine area near the relatively impermeable Quarry and Black Gap faults. The Dividend fault also acts as an aquitard, with an 800-foot difference in water level across the fault. The Bisbee West Fault in the area south of Warren appears to have little effect on water movement, as indicated by similarity of water levels on both sides of the fault. However, no water level data are available to the east or west along this fault. The sub-parallel Abrigo Fault further to the southwest appears to act as an aquitard as evidenced by the 329 foot difference in water level between TM-2 and GL-1 in 1996.

The water table in the area of the mine workings has been rising since pumps were turned off in 1987. Plots of water levels in the Junction Shaft and in selected monitor wells (CP Wells) are shown on Figures 7 and 8. Locations of shafts and monitor wells are shown on Figure 2. The plots indicate that wells located outside the faults bounding the ore bodies (CP-2, CP-4, CP-5, CP-6, CP-8 and CP-19) are not exhibiting a significant rise in water levels, while water levels inside the faults have risen over 1,400 feet since 1984. This data substantiates the conclusion that these faults act as aquitards. This conclusion is further supported by reports of miners encountering large water inflows when crossing major faults, such as flooding of the 2700 level when encountering the Campbell fault (SGC, 1997). The water level in Well CP-5 shows more rise than the others listed above, possibly due to its proximity to the Black Gap Fault.

3.5.1.4 – Water Use

According to the ADWR well registry, there are five wells located within the general area of the CQM that were identified as water production wells and are not owned by Phelps Dodge (ADWR, 2004). Data on these wells are given in Table 1.

Table 1, Water Supply Wells Not Owned by Phelps Dodge in CQM Area

Owner	Legal Location	Date Drilled	Elevation of Bottom of Well (ft msl)	Static Water Level (ft msl)	Difference (ft)
Gonzalez	D(23-24)19aaa	2000	5395	4650	+745
Girardi	D(23-24)23cbd	NA	NA	<4200[1]	NA
City of Bisbee	D(23-24)25	NA CNX	NA	>4600[1]	NA
Castanedo	D(23-24)25ccd	1989	4862	>4600[1]	>262
Paulovich	D(23-24)29bcb	1982	4568	4500	(68)

1. Estimated from Figure 2.

The Gonzalez and Castaneda wells are not deep enough to reach the regional water table; they appear to draw water from a perched water table. Only the Girardi and Paulovich wells are potentially within the area of influence of mine dewatering. Little is known of the Girardi well, or even if it exists. If it does exist it probably does not reach the limestone aquifer, as the well would have to be over 1,000 feet in depth. The Paulovich well was drilled in 1982 before mine dewatering ceased and would not likely be impacted by future pumping rates similar to past dewatering pumpage.

3.5.2 Naco-Bisbee Basin of the Upper San Pedro River Valley

As noted in Section 2.3.1, the portion of the Upper San Pedro River Valley that is closest to the Warren Mining District and the CQM is the Naco-Bisbee Basin. Any potential connection between the development of ground water in the mine area and flow in the San Pedro River would be controlled by hydrogeologic conditions in the Naco-Bisbee Basin. These conditions are described below.

Like the San Pedro River Valley, the basin-fill constitutes the principal water-bearing unit in the Naco-Bisbee Basin. In the Naco-Bisbee Basin the upper basin-fill is the primary source of water for wells. The underlying Morita Formation and Glance Conglomerate yields some water to wells but discharge rates are low, generally between 5 and 35 gpm (Litton, 1987). The saturated thickness of the basin-fill unit ranges from zero under the South Tailings Impoundment (shown near the center of the map on Figure 2) to over 500 feet near the intersection of the Naco-Bisbee Highway and Purdy Lane (S.E.T., 1998).

3.5.2.1 – Aquifer Parameters

Average hydraulic conductivity of the basin-fill in the Naco-Bisbee Basin is estimated to range from 75 to 600 gallons per day per square foot (gpd/ft^2) with an average of about

245 gpd/ft^2. The Morita Formation and Glance Conglomerate are estimated to have average hydraulic conductivities of 12 and 7 gpd/ft^2, respectively (S.E.T., 1998).

Ground water in the Naco-Bisbee Basin is generally under water table (unconfined) conditions. Average specific yield is estimated to be 0.2 for the basin-fill and about 0.08 for the Morita Formation and Glance Conglomerate (S.E.T., 1998).

3.5.2.2 – Ground-Water Movement

The direction of ground-water movement is to the southwest and thence to the west, as shown on Figures 2 and 4. The average gradient in 1996 in the area north of Naco was about 0.001 ft/ft (S.E.T., 1998). The gradient increases west of Naco before decreasing toward the Upper San Pedro River.

3.5.2.3 – Water use

The area immediately south of the CQM South Tailing Impoundment was used for agricultural irrigation and evaporation (via ponds) of water pumped from the underground workings from 1905 until 1987. During this time, a ground-water mound was created beneath the evaporation/irrigation area, extending about four miles to the southwest. Maximum rise in the ground-water mound was about 240 feet. Since the cessation of mine dewatering in 1987 water levels have been declining and in 2003 have fallen by over 200 feet in the center of the mound (Phelps Dodge, 2004).

There are nine public water supply wells within the Naco-Bisbee Basin. Table 2 presents available pertinent data on these wells.

Table 2, Naco-Bisbee Basin Public Water Supply Wells

Owner	Legal Location	Total Depth (ft)	Static Water Level (ft)	Reported Yield (gpm)
Naco Water Co.#1	D(24-24)19bab	215	140	NA
Naco Water Co.#2	D(24-24)18cac	210	133	NA
Naco Water Co.#3	D(24-24)18add	179	96	NA
Naco Water Co.#4	D(24-24)10ddd	379	216	NA

Arizona Water Co.#4	D(24-23)13abc	337	90	1200

NA - Not Available
U - Unused

Naco Water Company wells #4 and #5 are located near Bisbee Junction. Water levels in these wells have fallen in recent years, reportedly in response to the cessation of irrigation formerly applied by Phelps Dodge to the Warren Ranch lands (SGC, 1997). The remaining public water supply wells are located in the Naco area, where water levels are reported to be relatively stable (Litton, 1987). All of these wells are south of the ground-water divide near the Abrigo Fault and are unaffected by mine dewatering.

3.6 GROUND-WATER QUALITY

Ground-water quality within the study area is variable due, in part, to mineralization of the limestone and granites in the Warren District and to past mining activities. Water quality in the areas of interest is described below.

3.6.1 Copper Queen Mine Area

When the mine was in operation waters of different quality were separated and used in different mine processes, depending on the sensitivity of each process (use) to water of a certain quality. The flow of water within the mine is shown diagrammatically on Figure 6. Three categories of water (as defined by the miners): acid water, dirty water and clean water were collected and separately pumped to the surface. The classification these waters and average 1981 pumpage are given in Table 3.

Table 3, Mine Water Classification and 1981 Pumpage

Classification	1981 Pumpage	pH	Comments
Acid water	835 gpm	2.3	Part of pumpage is recirculation of leach water
Dirty water	2,120 gpm	5.1-5.2	Neutralized with lime underground to pH 7
Clear water	1,730 gpm	6-7	From eastern portion of the Campbell mine

Since the cessation of active mining, ground-water within the CQM area has been sampled primarily for compliance with Aquifer Protection Permit requirements. Data are available for 1989-1990 and for 1997. Available water quality data are summarized on Tables 4 and 5.

Ground-water from the mine workings is a calcium-sulfate type, high in TDS and sulfate. TDS in two samples from the Junction Shaft collected in 1988 and 1990 were 8,685 and 7,770 milligrams per liter (mg/l), with sulfates of 5,900 mg/l and 5,300 mg/l, respectively. The pH of water from the Junction shaft was reported to be 6.1 to 6.4.

Water quality in monitor wells located in fractured sedimentary rocks outside the ore bodies (CP-1, CP-4, CP-5, CP-6, and CP-11) is generally a calcium-bicarbonate type, with TDS ranging from 338 to 380 mg/l. Sulfate in these wells ranged from 17 to 35 mg/l.

3.6.3 Naco-Bisbee Basin

Native ground-water quality in the Naco-Bisbee Basin is a calcium-bicarbonate type. In areas not impacted by infiltration from mine irrigation, wastewater treatment or septic tank facilities, the TDS of the ground water ranges from 230 to 360 mg/l (Litton, 1987).

Shallow ground water in the area beneath and to the southwest of the former Phelps Dodge Warren Ranch irrigation field has elevated TDS and sulfate. Elevated levels of these constituents appear to be confined to the upper 80 feet of the basin-fill aquifer. Below 430 feet below ground surface (bgs), TDS and sulfate are near background levels (SGC, 1997). Nitrate exceeding the MCL has been detected in several monitoring wells. The source of nitrates is reported to be old feedlots associated with a railroad stockyard (Mansfield, 1997).

Arizona Water Company and Naco Water Company wells are either outside the area of poor quality water or are screened in deeper aquifers (SGC, 1997).

The hydrogeology and water quality of the Naco-Bisbee Basin area suggests that groundwater in this basin area has not been otherwise impacted to date by long-term pumping by the mining operations in the Warren Mining District.

4.0 WATER SUPPLY POTENTIAL

This section of the report discusses the potential availability and quality of ground water from the CQM and its potential impact on flow in the San Pedro River.

4.1 WATER AVAILABILITY FROM THE COPPER QUEEN MINE

As discussed in Section 3.5.1.3, ground water in the Warren Mining District is largely confined to the Paleozoic limestones that are the host rocks to the underground mines, including the CQM. The area of the limestone aquifer is generally bounded by the Quarry and Black Gap Faults on the west and east, and by the Dividend and Abrigo Faults on the north and south, respectively.

Ground water in storage within the CQM area includes water in the underground workings and in the limestone rock mass. Estimates of the storage volume of underground workings using digitized mine maps indicates a volume of about 6.2 billion gallons (WMC, 2000). The amount of available water stored in the limestone rock mass is dependent on the assumed specific yield. Published specific yields for limestone range from 0.5 to 5 percent (Walton, 1970). The range is bounded by the degree of solutioning and fracturing of the rock mass. The limestones in the Bisbee area are moderately to intensely fractured. Additionally, significant areas of the rock mass have been mined and backfilled ("gobbed") with waste rock (SGC, 1997). WMC (2000) calculated an average porosity (rock mass and underground workings) of 6 percent. Specific yield is generally less than porosity. For purposes of estimating the amount of ground water in storage specific yield values of 2 and 5 percent were assumed.

At a specific yield of 2 percent, the available water in storage in the CQM (bounded by the Quarry, Black Gap, Dividend and Bisbee West faults), excluding the mine workings, is 74 billion gallons. A specific yield of 5 percent gives a water volume of 180 billion gallons. Adding the mine workings gives a range of 80 to 186 billion gallons of water in storage in the CQM. The average withdrawal rate required to remove all the available water stored in the limestone and in the underground workings in 25 years is calculated to be between 6,000 and 14,000 gpm.

The 80-year history of pumping from the underground workings provides the best indication of the long-term yield of the limestone aquifer within the CQM area. Figure 4, shows that water production increased from 1907 until 1942 as the mines were expanded and deepened. After 1942, water production declined even though the workings were being deepened and expanded until 1961. This indicates that ground water was moving across the various faults bounding the mine area but not at a sufficient rate to maintain a constant pumping rate. As the rock mass was dewatered, the pumping rate decreased. In

1976, the mine workings were all open and the monthly average pumpage for the year was 3,270 gpm, of which approximately 695 gpm was recirculated leach water, as reported in the Monthly Manager's Reports for the period (SGC, 1997). Excluding an event such as the 1978 hurricane and associated flooding, long-term ground-water production from the CQM appears to be approximately 2,500 gpm (4,000 ac-ft/yr).

Initially, almost all the pumped water will come from storage. However, as the water level in the limestone rock mass declines, ground water will move across the faults bounding the CQM in response to the head difference created by pumping. Over time, pumped water will be a combination of stored water within the mine area and ground water from the surrounding area.

To estimate the change in pumping rate over time as the underground workings and rock mass are dewatered, a simplified 2-dimensional model was constructed using MODFLOW. The area modeled is bounded by the Quarry and Black Gap Faults on the west and east and by the Dividend and Bisbee West Faults on the north and south, respectively. The Bisbee West Fault on the south, rather than the more distant Abrigo Fault, was selected to provide a degree of conservatism to the model results. Two specific yield assumptions were run: 2 percent and 5 percent. A transmissivity of 6,000 gpd/ft was assumed for the limestone rock mass, including the underground workings.

The model simulated pumping from one (Denn) and two (Denn and Campbell) of the existing shafts. Pumping was initiated at 8,000 gpm; the rate was then reduced, if necessary, to maintain the drawdown at approximately 2,300 feet (the difference between the estimated pre-mining water elevation and the elevation (1,960 ft msl) of the 3100 level in the Campbell Shaft) over a 25-year period. The model was calibrated by maintaining a steady state inflow of 2,500 gpm at 2,300 feet of drawdown. Results are summarized in Table 6.

Table 6, Estimated 25-Year Pumpage from Shafts, in GPM

Pumping Period (yrs)	Campbell and Denn (S_y 0.02)	Denn (S_y 0.02)	Campbell and Denn (S_y 0.05)	Denn (S_y 0.05)
1-4	8,000	6,500	8,000	8,000
5-10	7,000	5,000	8,000	7,000
11-15	5,500	4,000	8,000	6,000
16-20	3,500	3,000	8,000	5,000
21-25	3,500	2,500	8,000	4,500

This analysis indicates that there is a benefit of distributing the pumping over the mine area to reduce the concentration of drawdown at one shaft. It also shows the effect of assumptions about specific yield on the rate of decline in pumpage over time.

4.2 WATER QUALITY IN THE COPPER QUEEN MINE AREA

As noted in Section 3.6.1, water quality varies within the CQM area. Water from the Junction shaft (1990) and C&C shaft (1996) is a mix of water from throughout the underground workings. This water is somewhat acidic, with an average pH of 6.1. TDS and sulfate are approximately 8,000 mg/l and 5,500 mg/l in the Junction Shaft. TDS are approximately 1,080 mg/l to 1,500 mg/l in the C&C Shaft (sulfate data are not available). Water quality is reported to be poorer in the western part of the district but better on the east and south (see Section 3.6.1).

Over time, pumping from any of the existing shafts will likely draw water from throughout the underground mine workings and water quality can be expected to be a blend of ground water from the District. For purposes of this study it is assumed that the average water quality will approximate the quality of water sampled from the CQM's Junction Shaft.

4.3 IMPACTS OF CQM WATER WITHDRAWALS ON OTHER WATER USES

The Copper Queen Mine is located on the edge of the San Pedro River Valley, as shown on Figure 3. Theoretical impacts of pumping ground water from the CQM include the lowering of water levels in nearby water supply wells and the reduction in tributary ground-water availability to the aquifers potentially supporting perennial flow in the San Pedro River. These theoretical impacts are discussed in more detail below.

4.3.1 – Water Supply Wells

After 80 years of mine dewatering, the lowering of water levels in the CQM area is confined to an area of about 11 square miles, as shown on Figure 2. Faults bounding the principal limestone aquifer are generally barriers to ground-water movement and the area of influence (drawdown) due to pumpage from the CQM.

A maximum of five registered, non-Phelps Dodge water supply wells are located within the potential area of influence of pumpage from the CQM (see Section 3.5.1.4). Of these, only one well (Paulovich) may tap the limestone aquifer, the other wells appear to produce from perched aquifers overlying the limestone aquifer. The Paulovich well was drilled in 1982 while the mine was still being dewatered, indicating that its production would not likely be impacted by future pumpage.

4.3.2 Upper San Pedro River Flow

Perennial reaches of the San Pedro River start south of Hereford, Arizona approximately 12 miles west of the CQM (Figure 3). Base flow in the San Pedro River is maintained by ground-water discharge from the regional basin-fill aquifer and Holocene alluvium (Pool, 1999). As discussed above, (and in Section 3.6.1) water pumped from CQM area is from Paleozoic limestones that are bounded by low permeability faults. Furthermore, area hydrogeologic data suggest that long-term pumping from the CQM area has not impacted basin-fill aquifers in the Naco-Bisbee Basin area of the Upper San Pedro Basin.

Water level drawdown due to pumpage at the CQM is limited to the area north of the Abrigo fault, as shown on Figure 2. Thus, pumpage from the CQM will have no direct effect on water levels in the regional aquifer or Holocene alluvium supplying base flow to the San Pedro River.

Given the fact that ground-water levels are generally higher in the CQM area than adjacent to the San Pedro River it could be argued that water "captured" within the area of mine dewatering is water that would ultimately flow into the regional aquifer. Under this scenario, water would theoretically move from the CQM area through the Naco-Bisbee Basin to the regional aquifer in the Sierra Vista subwatershed of the Upper Verde River and then discharge to the San Pedro River near Hereford. Given the geology of the Warren Mining District and the CQM area, any water movement into the Naco-Bisbee Basin would be impeded by low permeability faults separating the limestone aquifer beneath the CQM from the basin-fill aquifer in the Naco-Bisbee Basin. In addition, the potential area of "capture" of approximately 22 mi^2 is less than 1.5 percent of the total area of the Sierra Vista subwatershed.

Based on the foregoing, pumpage of 2,500 gpm (4,000 ac-ft/yr) from the CQM will have no measurable effect on base flow in the San Pedro River.

GENERAL INSTRUCTIONS FOR FILING NOTICE WITH ADWR

1. Section §45-596(D) provides that the Director shall determine that all information required on this form has been submitted. If not, the person filing will be notified, and the drilling, deepening or modification of the well may not proceed.
2. Section §45-596(d) provides that the Department has 15 days after the receipt of a complete and correct notice of intention to record the notice and mail duplicate to owner. Drill card will be mailed directly to drilling firm as stated in item #14.
3. Please mail two original notices with original signatures, a site plan in DUPLICATE, and a check or money order (no cash) in the amount of $10.00 to P.O. Box 458, Phoenix, Arizona 85001-0458 or hand deliver to 500 North Third Street, Phoenix, Arizona 85004-3903. USE BLACK OR BLUE INK.
4. If the well is a replacement, deepening or modification of an existing well, provide the registration number of the existing well in item 2.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Pursuant to Section §45-596, Arizona Revised Statutes, provides: a person may not drill, deepen, or modify any well, without first filing a Notice of Intention to Drill with the Department.

2. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in §45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.

   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.

   c. Shall demonstrate to the Director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.

   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

3. Endorsement by the county/local authority is based on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

4. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in section §45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

5. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

6. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

7. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§45-596.E.).

8. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

9. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

10. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-565260
File No. D(24-24)5 DAB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify/replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Toni Bergeman

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area.
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 12-16-86 Signature of Person Filing Richard Ross

DWR-55-41-8/86 (Revised)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 2-5-85 Signature of Person Filing Jack Yates

DWR-55-41-10/83

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

DWR 55-40 (REV 9/99)

APPLICATION GUIDELINES

In accordance with Arizona Revised Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening, or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 13 may be available from your driller.
4. Information to complete items 9 and 12 may be available from your County Assessor's Office.
5. For item 10, in an Active Management Area, A.R.S § 45-454 only allows non-irrigation uses for "exempt" wells. If the proposed use includes the growing of 2 or more acres of plants for sale or human/animal consumption (irrigation use), the well does not qualify as an exempt well.
6. An exempt well, referred to in Item 10, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute and used for non-irrigation purposes.
7. For item 11, in an Active Management Area, A.R.S §45-454 allow up to 56 acre feet per year of pumping from a domestic (residential) or stock watering exempt well, and up to 10 acre ft per year from an exempt well used for other (usually commercial non-irrigation) purposes.
8. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
9. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
10. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
11. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
12. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
13. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you a written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling contractor. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal around the casing from the surface to a depth of twenty feet, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Registration No. 55- 592791
File No. D(24-24) 12 BCB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Monica Ortiz
Water Resource Technician

APPLICATION GUIDELINES

In accordance with Arizona Revised Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening, or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 13 may be available from your driller.
4. Information to complete items 9 and 12 may be available from your County Assessor's Office.
5. For item 10, in an Active Management Area, A.R.S § 45-454 only allows non-irrigation uses for "exempt" wells. If the proposed use includes the growing of 2 or more acres of plants for sale or human/animal consumption (irrigation use), the well does not qualify as an exempt well.
6. An exempt well, referred to in Item 10, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute and used for non-irrigation purposes.
7. For item 11, in an Active Management Area, A.R.S §45-454 allow up to 56 acre feet per year of pumping from a domestic (residential) or stock watering exempt well, and up to 10 acre ft per year from an exempt well used for other (usually commercial non-irrigation) purposes.
8. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
9. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
10. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
11. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
12. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
13. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you a written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling contractor. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal around the casing from the surface to a depth of twenty feet, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Registration No. 55- 592792
File No. D(24-24) 11 DAB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Monica Ortiz
Water Resource Technician

0	19	8 5/8	X*				X						Cement
10	160	6 1/4		X			X						
160	200	6 1/4		X							X		

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Review Sheet for Notices of Intention (NOI) to Drill or Abandon Wells (Updated 07/24/2003)

Well Owner Name Leon & Mary East **Date** 8-4-03
Well Location D(24-24)14 ABD **Well Registration Number:** 55-599796

☒ **Permission has been granted to drill, deepen, replace, modify or abandon** the well indicated on the attached NOI.

☐ **Permission has been granted to drill or abandon** the well indicated on the attached NOI. However, special well construction or abandonment requirements may apply since the proposed well is located near or within the boundary of a groundwater contamination site. See attached special requirements or visit the ADWR "WQARF" homepage on the ADWR website at http://www.water.az.gov/ for further information on "Special well drilling requirements for wells located within areas of groundwater contamination". Please be aware that groundwater produced from the proposed well may not meet applicable federal, state, county or local water quality standards.

The checked special well drilling requirements apply to the indicated well (see attachments):

_____ **Standard Special Requirements (applies to contamination areas not covered by site-specific requirements)**
_____ **Pinal Creek Special Requirements**
_____ **Yuma Marine Corps Air Station Special Requirements**
_____ **Well Abandonment Handbook (see Standard Method or Alternatives 2 or 3)**

☐ **Permission has not been granted to drill or abandon** the well indicated on the attached NOI for the following reasons(s):

☐ Insufficient filing fee submitted*. Your check for $_____ is being returned to you. You must resubmit this review sheet, the attached NOI form (with any changes indicated below) and a check for the appropriate fee, which is $_____.

*NOI filing fees were increased on May 7, 2003. The appropriate filing fee for a well located within an AMA or INA is $150. For a well not located within an AMA or INA, the fee is $50 if the well will be used solely for domestic purposes and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise the fee is $150.

☐ County or local health official endorsement and approval is required but was not provided.

☐ Insufficient information to determine if well meets 100-foot setback requirement. Well owner must sign and return the attached certification form if well meets 100-foot minimum set-back requirement.

☐ Incomplete or incorrect well location information.

☐ Incomplete or incorrect well owner information.

☐ Land owner permission to drill letter is required.

☐ Proposed well is located within 100 feet of a septic system, sewer disposal area, landfill, hazardous waste materials or petroleum storage area or tank.

☐ Well driller information incomplete.

☐ Well driller is not currently licensed with ADWR and/or the Registrar of Contractors.

☐ Well construction information is incomplete, you must include design pump capacity (if applicable), well depth, well diameter and type of casing (if applicable).

☐ Well abandonment information is incomplete, you must include information on proposed well abandonment design (see ADWR Well Abandonment Handbook)

☐ Well owner or landowner information and/or signature incomplete or incorrect.

☐ Variance request has not been granted. Explanation:_____

☐ Other_____

If permission to drill or abandon the specified well has not been granted, please correct all indicated errors and/or deficiencies and resubmit the corrected NOI form, this review sheet, and any attachments (if applicable) to ADWR. Unless stated above, no additional fees are required to resubmit this NOI. Be sure to submit all necessary information with your corrected NOI. The original NOI file will not be reviewed when ADWR reviews your corrected NOI. You must resubmit all the required information within 60 days, or you will need to file a new NOI with a new fee. Note: If you do not have the necessary information or need help, please contact your driller/consultant.

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice of Intent the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $50.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

** PLEASE PRINT CLEARLY **

SECTION 1. COUNTY OR LOCAL HEALTH AUTHORITY ENDORSEMENT (if applicable)

If water from the proposed well will be used for domestic purposes on a parcel of land of 5 or fewer acres, the applicable county or local health authority must endorse all items in Section 1 before submission to the Department of Water Resources. You must also attach a site plan (see instructions).

Registration No. 55- 599796
File No. D(24-24) 14 ABD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Monica Ortiz
NOI Unit

COMPLETION REPORT

1. Completion Report to be filed with the Department within 30 days after installation of pump equipment.

2. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

3. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

4. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

LOCATION OF THE WELL

T-24s-R24E-S-16 NW-NW-NW .

Date Well Completed 7-81 Depth of Well 200'

1. Well Test:
Test Pumping Capacity 25 (Gal. per min.) Date Well Tested 7/8/81

Method of Discharge Measurement 5 gal Container (weir, orifice, current meter, etc.)

Static Groundwater Level 120' ft. Drawdown 10' ft.

Total Pumping Lift 180' ft. Drawdown _____ lbs. (Flowing Well)

2. Equipment Installed:

Kind of Pump Submersible (turbine, centrifugal, etc.)

Kind of Power Elec. (Elec., Nat. Gas, Etc.) H.P. Rating of Motor 3

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

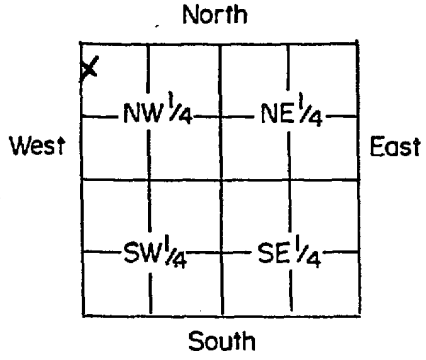
EXEMPT WELL
FILING FEE: $3.00

DEPARTMENT OF WATER RESOURCES
NOTICE OF INTENTION TO DRILL OR DEEPEN
AN EXEMPT WELL

EXEMPT WELL

Section 45-596, Arizona Revised Statutes, provides: A person may not drill or cause to be drilled any well or deepen or replace an existing well without first filing a Notice of Intention to Drill with the Department on a form prescribed and furnished by the Department. The well shall be completed within one year after the date of Notice. An exempt well means a well having a pump with a maximum design capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An exempt well may include the non-commercial irrigation of not more than 1 acre of land.



- Indicate Well Location by X
(Above diagram represents one 640 acre section)

Registration No. 55-218386
File No. D(24-24) 10 DDB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling. **PLEASE NOTE:** The Authorization to drill this well **DOES NOT constitute or guarantee an approval to use the well for the purpose of withdrawing groundwater for transportation to an Active Management Area (AMA)** pursuant to A.R.S. § 45-552, 45-553, 45-554 or 45-555(A). Groundwater **may not** be withdrawn from this well for these transportation purposes **without official prior approval from the Department.** Please contact the office in the AMA where the groundwater is to be transported to determine what additional forms are needed and for more information on this process.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Denae Schoonover

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Re: NOI to Drill 55-218386

Dear Mr. Fleming:

Enclosed is a refund check in the amount of fifty dollars ($50.00). The Department is refunding a portion of the NOI filing fees because of an overpayment on your part. The appropriate filing fee for a well located within an AMA or INA is $150. For a well not located within an AMA or INA, the filing fee is $100 if the well will be used solely for domestic purposes and will have a pump with a maximum capacity of not more than 35 gallons per minute.

If you have any questions about the refund, please contact me at 602-771-8646.

Sincerely,

Denae Tak

Registration No. 55- 212447
File No. D(24-24) 11 DCC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Tiffany Hancock

+1	20	8 5/8	X*										Cement
0	200	6		X									

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

COMPLETION REPORT

1. Completion Report to be filed with the Department within 30 days after installation of pump equipment.

2. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

3. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

4. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

LOCATION OF THE WELL

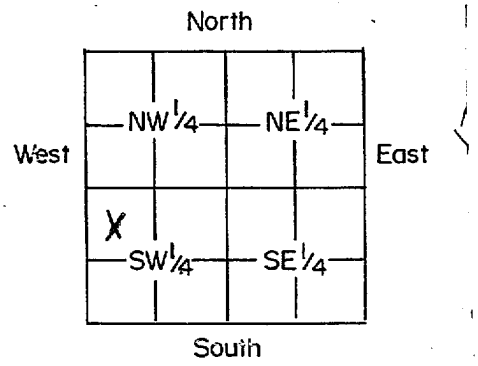
EXEMPT WELL

FILING FEE: $3.00

DEPARTMENT OF WATER RESOURCES
NOTICE OF INTENTION TO DRILL OR DEEPEN AN EXEMPT WELL

EXEMPT WELL

Section 45-596, Arizona Revised Statutes, provides: A person may not drill or cause to be drilled any well or deepen or replace an existing well without first filing a Notice of Intention to Drill with the Department on a form prescribed and furnished by the Department. The well shall be completed within one year after the date of Notice. An exempt well means a well having a pump with a maximum design capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An exempt well may include the non-commercial irrigation of not more than 1 acre of land.



-Indicate Well Location by X
(Above diagram represents one 640 acre section)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-558557
File No. D(24-24)17BBB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill, deepen or modify a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593(C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Dorothy Boggs

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, The completion report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation. For a flowing well the shut-in presssure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

REQUEST FORM TO CHANGE WELL INFORMATION
OWNERSHIP * DRILLER

Please complete the appropriate section of this request form and return to P.O. Box 458, Phoenix, Arizona 85001-045. In accordance with A.R.S. § 45-113, please submit the applicable fee. NOTE: A.R.S. §45-593 (C) requires that the Department be notified of change of well ownership and that the new owner is required to keep the Department's Well Registration records current and accurate. Well data and ownership changes must be submitted within thirty days after changes take place.

SAVE THIS FORM TO REPORT FUTURE CHANGES IN OWNERSHIP, CHANGES IN ADDRESS, OR CHANGE IN WELL DATA SUCH AS PUMP CAPACITY, CORRECTION OF LEGAL DESCRIPTION, CHANGE OF WELL DRILLER AND AMENDING INFORMATION PREVIOUSLY FILED.

1. CHANGE OF WELL INFORMATION: (NO FEE REQUIRED)

NOTE: If the location of the proposed well changes after drilling authority has been issued, **attach a $10.00 reissue fee for each** of the drilling authorities to be changed.

WELL REGISTRATION NO. 55-_____ **FILE NO:**_____

I/We request the following well information be changed: _____

_____

Date_____ Signature of Current Well Owner_____

***Note: This information is on your copy of the Notice of Intent to Drill.**

2. STATEMENT OF CHANGE OF WELL OWNERSHIP: ($10.00 FEE REQUIRED)

NOTE: If this change consists of more than one well and the names are common: attach a $10.00 fee. Otherwise, each well requires a separate fee of $10.00.

Dear Well Owner

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596 The enclosed Completion Report is to be submitted when pump equipment is installed The Drilling Card and Well Drilling Report form have been sent to your driller He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling If you change drillers, you must supply this Department with the new driller's identity Please ensure that the driller you select is licensed to drill the type of well you require All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling You should insist, and ensure, that both of these are done

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816 F

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate We have enclosed a Change of Well Information Form should it be needed in the future

Sincerely,

Toni Bergeman

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

19. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air Rotary

b) Borehole diameters: 13 3/4 inches from 0 feet to 20 feet.
~~8 1/2~~ 9 7/8 inches from 20 feet to 1500 feet.

c) Casing materials (PVC, steel, hollow-stem auger, etc.)

material LC Steel diameter 9 5/8 inches from 0 feet to 20 feet
material LC Steel diameter 4 1/2 inches from 0 feet to 1450 feet

d) Method of sealing at reductions

e) Annular seal materials (cement, grout, etc.); method of placement (tremied, circulated) 1430

material ~~grout 10-20 Colorado Silica~~ method tremie from ~~1440~~ 0 feet to ~~1500~~ feet
material Bentonite method tremie from 1430 feet to 1440 feet

f) Filter packs (state material):

material 10-20 Colorado Silica from 1440 feet to 1500 feet
material _____ from _____ feet to _____ feet

g) Perforations or screen specifications:

type stainless Steel Wire wrap from 1450 feet to 1490 feet
type _____ from _____ feet to _____ feet

h) Method of well development (bail, air lift, surge) Air Lift

i) Will surface or conductor casing extend above grade: Yes X No _____

20. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one (1) year after the date of Notice.

III. A Well Driller Report, is required within 30 days of completion of drilling. A completion Report, is required to be filed with the Department within 30 days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the maximum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual volume of 10 acre feet total.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casing. Identification information will include well registration number."

VI. If the proposed well is located near the Colorado River and if the proposed well may pump Colorado River Water, proof must be submitted with this notice that the applicant has the legal right to use Colorado River Water. Alternately, evidence needs to be submitted that supports the contention that Colorado River water will not be withdrawn by the well. Persons near the Colorado River may wish to contact the Colorado River Management Division, Department of Water Resources at (602) 542-1960 to determine those Townships and Ranges which will be affected by these requirements or with questions regarding the proof of right.

VII. Special construction standards required pursuant to A.A.C. Rule R12-15-821: _____

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished. He is required to complete it and return it to the Department within 30 days after the installation of the pumping equipment as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F. Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

For additional information, you may contact the Operations Division at (602) 542-1581.

Sincerely,

Ellen Kane

19. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air Rotary

b) Borehole diameters: 13 3/4 inches from 0 feet to 20 feet.
8 1/2 inches from 0 feet to 100 feet.

c) Casing materials (PVC, steel, hollow-stem auger, etc.)

material LC Steel diameter 9 5/8 inches from 0 feet to 20 feet
material LC Steel diameter 4 1/2 inches from 0 feet to 90 feet

d) Method of sealing at reductions

e) Annular seal materials (cement, grout, etc.); method of placement (tremied, circulated)

material grout method tremie from 0 feet to 30 feet
material bentonite method tremie from 30 feet to 40 feet

f) Filter packs (state material):

material 10-20 Colorado Silica from 40 feet to 100 feet
material _____ from _____ feet to _____ feet

g) Perforations or screen specifications:

type PVC Sch 80 from 50 feet to 90 feet
type _____ from _____ feet to _____ feet

h) Method of well development (bail, air lift, surge) Air Lift

i) Will surface or conductor casing extend above grade: Yes X No _____

20. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one (1) year after the date of Notice.

III. A Well Driller Report, is required within 30 days of completion of drilling. A completion Report, is required to be filed with the Department within 30 days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the maximum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual volume of 10 acre feet total.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casing. Identification information will include well registration number."

VI. If the proposed well is located near the Colorado River and if the proposed well may pump Colorado River Water, proof must be submitted with this notice that the applicant has the legal right to use Colorado River Water. Alternately, evidence needs to be submitted that supports the contention that Colorado River water will not be withdrawn by the well. Persons near the Colorado River may wish to contact the Colorado River Management Division, Department of Water Resources at (602) 542-1960 to determine those Townships and Ranges which will be affected by these requirements or with questions regarding the proof of right.

VII. Special construction standards required pursuant to A.A.C. Rule R12-15-821: _____

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished. He is required to complete it and return it to the Department within 30 days after the installation of the pumping equipment as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F. Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

For additional information, you may contact the Operations Division at (602) 542-1581.

Sincerely,

Ellen Kane

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished. He is required to complete it and return it to the Department within 30 days after the installation of the pumping equipment as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F. Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

For additional information, you may contact the Operations Division at (602) 542-1581.

Sincerely,

Ellen Kane

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area.
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 3-28-84 Signature of Person Filing Jim Sayre

DWR-55-41-10/83

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

FILE COPY

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S.45-593, by filing this form in duplicate with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.
2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.
3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.
4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of less than two (2) acres of land.
5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.
2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.
3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, lot number and address.
4. Show all purposes for which the water is used.
5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.
6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.
7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.
8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, lot number and/or address on the blank line.
9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Completion Report to be filed with the Department within 30 days after installation of pump equipment.

2. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

3. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

4. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

DEPARTMENT OF WATER RESOURCES
NOTICE OF INTENTION TO DRILL OR DEEPEN
AN EXEMPT WELL

EXEMPT WELL

Section 45-596, Arizona Revised Statutes, provides: A person may not drill or cause to be drilled any well or deepen or replace an existing well without first filing a Notice of Intention to Drill with the Department on a form prescribed and furnished by the Department. The well shall be completed within one year after the date of Notice. An exempt well means a well having a pump with a maximum design capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An exempt well may include the non-commercial irrigation of not more than 1 acre of land.

Registration No. 55- 209737
File No. D(24-24) 17 BBD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Tiffany Hancock

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

SECTION 7. PROPOSED WELL CONSTRUCTION DESIGN (attach separate sheet if needed)

DATE CONSTRUCTION IS TO BEGIN: OCT 2005

Borehole			Casing													
DEPTH FROM SURFACE			DEPTH FROM SURFACE			MATERIAL TYPE (T)				PERFORATION TYPE (T)						
FROM (feet)	TO (feet)	BOREHOLE DIAMETER (inches)	FROM (feet)	TO (feet)	OUTER DIAMETER (inches)	STEEL	PVC	ABS	IF OTHER TYPE, DESCRIBE	BLANK OR NONE	WIRE WRAP	SHUTTER SCREEN	MILLS KNIFE	SLOTTED	IF OTHER TYPE, DESCRIBE	GROUTING MATERIAL
0-20	1-20	12 1/4"	+1	20'	8 5/8											
20	300	8"	0	300	6"	X*	X									Cement

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

-1	20'	8 5/8											
0	300	6"	X*	X									Cement

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Director

CRAIG KEEFER
PO BOX 530
NACO, AZ 85620

Registration No. 55-209744
File No. D(24-24) 18 CBB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Monica Ortiz

REQUEST FORM TO CHANGE WELL INFORMATION
OWNERSHIP * DRILLER * VARIANCE

Please complete the appropriate section of this request form and return to P.O. Box 458, Phoenix, Arizona 85001-0458 or hand deliver to the above address with applicable fee. NOTE: A.R.S. §45-593.C requires that the Department be notified of change of well ownership and that the new owner is required to keep the Department's Well Registration records current and accurate. Well data and ownership changes must be submitted within thirty days after changes take place.

SAVE THIS FORM TO REPORT FUTURE CHANGES IN OWNERSHIP, CHANGES IN ADDRESS, OR CHANGE IN WELL DATA SUCH AS PUMP CAPACITY, CORRECTION OF LEGAL DESCRIPTION, CHANGE OF WELL DRILLER AND AMENDING INFORMATION PREVIOUSLY FILED.

1. CHANGE OF WELL INFORMATION: (NO FEE REQUIRED)

NOTE: If the location of the proposed well changes after drilling authority has been issued, attach a $10.00 reissue fee for each well.

APPLICATION GUIDELINES

In accordance with Arizona Revised Statutes ("A.R.S ") §§ 41 1008 and 1079 the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1 Pursuant to A.R.S § 45-596 a person may not drill cause to be drilled deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill deepen or modify a well Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site issued by the Director in the name of the well drilling contractor or licensee and which authorizes the drilling of the specific well in a specific location To assist you in understanding the requirements for this application copies of A.R.S § 45-596 and Arizona Administrative Code (' A.A.C ") R12 15-810 are available at the Department bookstore (602-417-2450 x7127)

2 If replacing deepening or modifying an existing well provide the registration number of the existing well in item 2 A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well

3 Information to complete items 3 4, 5 and 13 may be available from your driller

4 Information to complete items 9 and 12 may be available from your County Assessor's Office

5 For item 10, in an Active Management Area A.R.S § 45-454 only allows non irrigation uses for exempt" wells If the proposed use includes the growing of 2 or more acres of plants for sale or human/animal consumption (irrigation use) the well does not qualify as an exempt well

6 An exempt well, referred to in Item 10 means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute and used for non irrigation purposes

7 For item 11, in an Active Management Area A.R.S §45-454 allow up to 56 acre feet per year of pumping from a domestic (residential) or stock watering exempt well and up to 10 acre ft per year from an exempt well used for other (usually commercial non-irrigation) purposes

8 If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property The plan must be on an 8½ x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines to scale It must include the county assessor s parcel identification number The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site as well as indicating the measured shortest distance between the proposed well and existing septic tank system **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system**

9 The site plan must be approved by the county health authority or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems Endorsement by the county/local authority is based solely on the best available judgement that the proposed well as shown on the site plan submitted is 100 feet or more from all known and visually identifiable sewage treatment systems It is not a representation that a well placed at this site will be guaranteed as to quantity or quality In areas where there is no local or county authority that controls installation of septic tanks or sewer systems or if the health authority is unable to determine whether the proposed well location complies with state and local requirements the applicant must apply for approval directly to the Department of Water Resources

10 If an individual other than the land owner or lessee signs this notice an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf must accompany the notice

11 Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R S § 45 113 a **check or money order (no cash) in the amount of $10 00** to P O Box 458 Phoenix Arizona 85001 0458 or hand deliver to 500 North Third Street Phoenix, Arizona

12 Arizona Revised Statute § 45 596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted If not the person filing the Notice will be notified and the drilling or modification of the well may **not** proceed

13 This form is not applicable for non exempt wells (those yielding more than thirty five gallons per minute) within an Active Management Area Contact Groundwater Management for further information regarding the appropriate notice to file with the Department

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention the Arizona Department of Water Resources (' Department) will determine whether your application should be granted or denied unless this time is extended for lack of a complete application If your application is incomplete the Department will notify you in writing and will specify what information is necessary to make the application complete Until the missing information is received, the time frame for review of your application will be suspended Your application will not be complete until all of the requested information is received If you do not supply the missing information within sixty (60) days the Department may deem your application withdrawn and close the file

At the end of its review the Department will send you a written notice either granting or denying your application for drilling authority If your application is approved the Drill Card will be mailed directly to the drilling contractor If denied the Department s notice will state justification for the denial and an explanation of your right to appeal

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1 Construction and abandonment standards for wells must be in accordance with Department Regulations A.R.S § 45 594 and Arizona Administrative Code R12 15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal around the casing from the surface to a depth of twenty feet unless a variance is granted **(see A R S § 45-596 (G) for procedure to follow in requesting a variance)**

2 Pursuant to § 45-596(E) the drilling deepening or modification of the well must be completed within one year of the date of the Notice of Intent If the well is not completed within one year a new Notice of Intent must be filed before proceeding with further construction

3 If a well which was originally drilled as an exploration well a monitor well a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454 the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes

4 Within thirty days after installation of pumping equipment the registered well owner must file a Completion Report with the Department The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well

Dear Well Owner

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596 The enclosed Completion Report is to be submitted when pump equipment is installed The Drilling Card and Well Drilling Report form have been sent to your driller He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling If you change drillers, you must supply this Department with the new driller's identity Please ensure that the driller you select is licensed to drill the type of well you require All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling You should insist, and ensure, that both of these are done

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816 F

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate We have enclosed a Change of Well Information Form should it be needed in the future

Sincerely,

Toni Bergeman

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

GENERAL INSTRUCTIONS

1. Fill out this form in DUPLICATE and send WITH $10.00 FEE to 15 South 15th Avenue, Phoenix, AZ 85007.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen, replace or modify a well outside of an Active Management Area.
4. If the well is a replacement, deepening or modification of an existing well, provide the registration number of the existing well in Item 21.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules and Regulations.

I state that Notice is filed in compliance with A.R.S. §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well as set forth on the reverse side of this form.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Receipt of this annotated Notice constitutes authorization to proceed in drilling, deepening, or modifying the well as set forth on this Notice.

2. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well.

3. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 3 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to A.R.S. § 45-434 or § 45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of A.R.S. § 45-437.

5. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

Registration No. 55-539265
File No. D(24-24)17BBB

Dear Mr. Mc Connell:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, whic h was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized. **In no case may the replacement well be more than 660 feet from the well it is replacing.**

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

If the information you provided indicates your well is near the Colorado River; if in the future, it is determined that water from your well is supplied from the river and you do not have a perfected water right to Colorado River water established prior to 1929, the U.S. Bureau of Reclamation may require you to cease pumping or enter into a contract for use of Colorado River water.

Sincerely,

Dorothy Boggs
Groundwater Permit Specialist

Re: Denial of Notice of Intention to Drill Well Number 55-590386

The Department of Water Resources notified you by letter on January 10, 2002 that your application to drill a well was incomplete. Pursuant to Arizona Revised Statutes (A.R.S.) § 41-1074(B), a list of the specific deficiencies preventing your application from being complete was provided to you in that letter. The completeness review time frame was suspended by the incomplete letter, and you were given sixty (60) days within which to provide the requested information. Our records indicate that you did not do so.

Therefore, pursuant to Arizona Administrative Code R12-15-401, the Department hereby denies your application.

The Departments decision to deny your application is an appealable agency action. In order to appeal this decision, you must request an appeal within thirty (30) days from receipt of this letter. A summary of the appeals process and appeal form is enclosed should you wish to pursue this option.

Alternatively, you may submit a new Notice of Intention for authority to drill at this particular location. To expedite the process, please include the information missing in your original Notice of Intention to Drill.

Should you have any questions, please contact Alan Dulaney of the Department of Water Resources at (602) 417-2470.

Sincerely,

Toni Bergeman

Dear Applicant:

The Department of Water Resources recently received your Notice of Intent to **Drill, Deepen, Replace, or Modify A Well.** However, our review indicates that the filing(s) is incomplete under the Groundwater Management Act for the following reason(s):

(A) Landowner Info. Incomplete: ____
(C) County not Given: ____
(D) Book, Map, Parcel Incorrect: ____
(E) Number of Acres Not Given: ✓
(F) Legal Description Incomplete: ____
____Incomplete Quarter Sections
____Incomplete/Incorrect Section
____Incomplete/Incorrect Township ?
____Incomplete/Incorrect Range
(G) Recommendation Not Selected: ____
(H) Date Of Approval Not Given: ____
(1) Well owner Info. Incomplete: ____
(2) Action Requested (check one): ____
(3) Starting Date Not Given: ____
(4) Casing To Be Used (answer all): ✓
(5) Design Capacity of Pump : ✓
(6) Lessee Info. Incomplete: ____
(7) Primary Water Use Not Given: ____
(8) Other Water Uses Not Given: ____

(9) Place of Use Incomplete (refer to "F"): ____
(10) Type of Well (check one): ____
(11) Select One (define "other"): ____
(12) Select "Yes" or "No": ____
(13) Incomplete Driller Information: ____
(14) Printed Name/Title Not Given: ____
(15) Incorrect/Unauthorized Signature: ____
Requires Current Forms: ____
Please Refer to the Attached Letter: ____
Requires $10.00 Filing Fee: ____
Need County Approval (see attached list) ____

Other Reason(s): Please verify Township - F & 9

PLEASE CALL TONI BERGEMAN AT 602-417-2400 EXT. 7148 WITH ANY QUESTIONS.

In accordance with A.R.S § 45-596; Paragraph D, this application is being returned as a "statement of determination", requesting information necessary to make it correct and complete. If the necessary information is not received by the Department within sixty (60) days, the application may be denied. You would then have to re-initiate the N.O.I. process to receive a drilling authority for this location. If you have any questions, please contact the Groundwater Management Support Section at (602) 417-2470. **ATTACH THIS CHECK LIST WHEN RESUBMITTING THE COMPLETED NOTICE OF INTENT AND RETURN TO BOX 458, PHOENIX, ARIZONA 85004-3003. YOU MAY ALSO CONTACT YOUR DRILLER OR COUNTY ASSESSORS OFFICE FOR ASSISTANCE PERTAINING TO THE NECESSARY INFORMATION THAT IS REQUIRED TO COMPLETE YOUR APPLICATION.**

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form in duplicate with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

NOTICE OF INTENTION TO DRILL WELL

LAND DEPARTMENT
WATER DIVISION
STATE OF ARIZONA

RECEIVED
DEC 18 1978
STATE LAND DEPT.

By Law, no person shall drill, or cause to be drilled, any well for the development and use of Ground Water in Arizona without first filing Notice of Intention to Drill with the State Land Department. The only exceptions are for those irrigation wells within critical Ground Water areas for which Drilling Permits are required. No well shall be drilled by other than the owner without the driller being licensed with the Registrar of Contractors. The driller's license number must be included before the State Land Department will process the filing.

Gentlemen:

File No. D(24-24)5 dbb D
35-71891

This copy of Notice of Intention to Drill Well in Twp. 24 S , Rge. 24 E , Section 5 , NW $\frac{1}{4}$ NW $\frac{1}{4}$ SE $\frac{1}{4}$, is returned to you for your file. Also enclosed are:

X WELL DRILLING CARD, which should be in the hands of the driller before construction of the well is started;

X REPORT OF WELL DRILLER form, which may be filled in by the driller but which you should make sure is mailed to us after completion of the well;

X REPORT OF EQUIPMENT INSTALLED form, which shall be filled in by you and sent to us after the installation of the pumping equipment;

____ DIAGRAMS of recommended cement grout seal and pump installation, supplied by the Department of Health.

In the event it is necessary to change the location of the proposed well, you should obtain the written permission of the State Land Commissioner before proceeding with the drilling.

Very truly yours,

XXXXXXXXXXXXXXXXXX
State Land Commissioner

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Per **A.R.S. § 45-600**, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24 N/(S)	23 (E)/W	13	NE 1/4	NE 1/4	SE 1/4
Township	Range	Section	10-acre	40-acre	160-acre

EQUIPMENT INSTALLED:

Kind of pump Submersible

GENERAL INSTRUCTIONS

1. Fill out this form in DUPLICATE and send WITH $10.00 FEE to 15 South 15th Avenue, Phoenix, AZ 85007.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen, replace or modify a well outside of an Active Management Area.
4. If the well is a replacement, deepening or modification of an existing well, provide the registation number of the existing well in Item 8.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.
6. Section §45-596(D), provides that the Director shall determine that all information required on form has been submitted. If not, the person filing will be notified, and the drilling, deepening, or modification of the well may not proceed.

I state that this Notice is filed in compliance with A.R.S. §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well as set forth on the reverse side of this form.

DWR-55-40 9/92 (Rev.)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Receipt of this annotated Notice constitutes authorization to proceed in drilling, deepening, or modifying the well as set forth on this Notice.

2. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

3. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an INA or AMA to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 3 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to A.R.S. §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of A.R.S. §45-437.

5. Multiple Drinking Water Connections mean other parcels of land being served by your well that are not owned by you. Each separate parcel is considered one connection.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the issuance of the drilling authority.

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

10. If the proposed well is a non-exempt well and is located near the Colorado River and if the proposed well may pump Colorado River Water, proof must be submitted with this notice that the applicant has the legal right to use Colorado River Water. Alternately, evidence needs to be submitted that supports the contention that Colorado River water will not be withdrawn by the well. Persons near the Colorado River may wish to contact the Colorado River Management Division, Department of Water Resources at (602) 542-1960 to determine those Townships and Ranges which will be affected by these requirements or with questions regarding the proof of right.

Registration No. 55-538847
File No. D(24-23)13DAA

Dear Ms. Willson:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized. **In no case may the replacement well be more than 660 feet from the well it is replacing.**

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

If the information you provided indicates your well is near the Colorado river. If, in the future, it is determined that water from your well is supplied from the river and you do not have a perfected water right to Colorado River water established prior to 1929, the U.S. Bureau of Reclamation may require you to cease pumping or enter into a contract for use of colorado river water.

Sincerely,

db

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Per A.R.S. 45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

Registration No. 55-212483
File No. D(24-24) 2 BCC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

T. Hancock

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

RECEIVED
JUN - 2 2006
AZ DEPT. OF WATER RESOURCES

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

SECTION 4.

Questions	Yes	No	If Yes:
1. Is the proposed well site within 100 feet of a septic tank system, sewer disposal area, landfill, hazardous materials or petroleum storage area or tank?		X	You must also request a variance (A.A.C. R12-15-816).
2. Is there another well name or identification number associated with this well?		X	PLEASE STATE
3. Is the proposed well the second exempt well on this parcel for the same use?		X	If the proposed well is in an Active Management Area, you must also file a supplemental form 55-40A.

WELL DRILLER REPORT

This report should be prepared by the driller in all detail and filed with the Department within 30 days following completion of the well.

1. Owner Naco Sanitary Dist.
P.O. Bx 755 Naco Az 85620
Name / Mailing Address

2. Driller Harry Bliss — H.B. Drlg
P.O. Bx 4166 Huachuca City, Az 85616
Name / Mailing Address

3. Location of well: T-24S R-23E S-13 NWx NWx NE

4. Permit No. _____ (If issued)

DESCRIPTION OF WELL

5. Total depth of hole 120 ft.

6. Type of casing Steel and PVC

7. Diameter and length of casing 12" steel in. from 0 to 62, 4" PVC in from 55 to 120.
4" steel + 2-5 ft.

8. Method of sealing at reduction points Bentonite Tablets and cement grout

9. Perforated from 115 to 75, from ____ to ____, from ____ to ____.

10. Size of cuts .20 Number of cuts per foot _____

11. If screen was installed: Length 40 ft. Diam 4 in. Type 4" PVC Flush Thread

12. Method of construction Test hole 6" air drilled Surface casing and finished well Forward mud
drilled, dug, driven, bored, jetted, etc

13. Date started April (Month) 26 (Day) 1990 (Year)

14. Date completed May (Month) 12 (Day) 1990 (Year)

15. Depth to water 84.54 ft. (If flowing well, so state)

16. Describe point from which depth measurements were made, and give sea-level elevation if available ground level elevation 4527

17. If flowing well, state method of flow regulation: N/A

18. Remarks: Bleu 10 gpm
Monitor Well No. 2

COMPLETION REPORT

1. Per **A.R.S. §45-600**, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

T24S	R23E	13	NW NW NE
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump Vertical Submersible
Turbine, centrifugal, etc.

Kind of power Electric H.P. Rating of Motor 3/4
Electric, natural gas, gasoline, etc.

Pumping Capacity 15 Date pump installed: May 11, 1990
Gallons per minute

WELL TEST:

Test pumping capacity 15 Date Well Tested: 5/11/1990
Gallons per minute

Method of Discharge Measurement Timed with Pail
Weir, orifice, current meter, etc.

Static Groundwater Level 84.54 ft. Drawdown 8 ft.

Total Pumping Lift 107 ft. Drawdown N/A lbs.
(Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

NACO SANITARY DISTRICT
Signature of Applicant President

DWR 55-44-9/88

13. Is this well to monitor existing contamination?_____ Potential contamination? X
Please explain Monitoring potential contamination from Naco Wastewater Treatment Plant.

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? Dennis Pontius, ADEQ
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact?_____

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Rotary

b) Borehole diameters:
16 inches from 0 feet to 80 feet
12 inches from 80 feet to 150 feet
____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 12 inches from 0 feet to 80 feet
material PVC diameter 4 inches from 0 feet to 95 feet
material ____ diameter ____ inches from ____ feet to ____ feet

d) Method of sealing at reductions_____

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Concrete method Tremied from 0 feet to 80 feet
material ____ method ____ from ____ feet to ____ feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):
material Natural D50 pases No. 6 screen from 78 feet to 150 feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Nominal width 0.02", 3.5 in^2/Ft. from 95 feet to 129 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) airlift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821:_____

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well; a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

REASON FOR VERBAL: Water company well failed. Drilling need for new well.

* 9/6/95

According to Don Webber of Weber Drilling, #272, there is only one well at the above legal description. Both well files (55-626702 & 627685) reflect the same general well data. Will adjust the files accordingly.

Dear Ms. Lopez,

Enclosed, in duplicate, is an application to replace an existing well which has essentially failed, (Well Reg. # 55-627685). I request therefore that you consider this an emergency request for approval.

I am faxing this letter along with a copy of the completed application. The original Notice of Intention and a $10 fee check is being sent via FEDEX today.

Thank you for your assistance in this rather urgent matter.

Sincerely,

E. H. "Buck" Lewis

Registration No. 55-551849
File No. D(24-24)10 DDD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/replace/modify a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized. **In no case may the replacement well be more than 660 feet from the well it is replacing.**

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future. If, in the future, it is determined that water from your well is supplied from the river and you do not have a perfected water right to Colorado River water established prior to 1929, the U.S. Bureau of Reclamation may require you to cease pumping or enter into a contract for use of colorado river water.

Sincerely,

Sylvia Valdez

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Re: Well Registry Number: 55-203321
File (Location) Number: D(24-24)18ADD

Dear Applicant:

The Department of Water Resources recently received your Notice of Intent (NOI) to Drill, Deepen, Replace or Modify a Well. However, our review indicates that the NOI is incomplete under the Groundwater Management Act for the following reason(s):

- **NEED CORRECT FILING FEE WELL BEING USED FOR MUNICIPAL IS A $150 FEE. WELL OUTSIDE AMA BEING USED FOR DOMESTIC ONLY IS A $50 OTHERWISE THE FEE IS $150. NEED AN ADDITIONAL FEE OF $100 FOR YOUR APPLICATION TO BE PROCESS.**
- **NEED LANDOWNER SIGNATURE OR LETTER OF AUTHORIZATION.**
- **NEED TO FILE AN ABANDONMENT APPLICATION IF REPLACING. BUT BECAUSE YOUR OUTSIDE AND ACTIVE MANAGEMENT AREA YOUR CAN CHOOSE TO KEEP THE OLD WELL AND JUST APPLY FOR A NEW WELL.**

PLEASE CALL MONICA ORTIZ AT 602-417-2400 EXT. 7148 WITH ANY QUESTIONS.

In accordance with Arizona Revised Statutes (A.R.S.) § 45-596, Paragraph D, the Department is mailing this "statement of determination" as a request for information necessary to make the NOI complete and correct. Please provide the Department with the additional information and resubmit the corrected NOI form and any attachments (if applicable) to ADWR. The Department's substantive review time frame is suspended until all requested information is provided. If the Department does not receive the necessary information within sixty (60) days, the application may be denied. You would then have to re-initiate the NOI process and pay a new filing fee to receive a drilling authority for this location.

Registration No. 55- 203321
File No. D(24-24) 18 ADD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Monica Ortiz

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

GENERAL INSTRUCTIONS FOR FILING NOTICE WITH

1. Section § 45-596(D) provides that the Director shall determine that all information required on this form has been submitted. If not, the person filing will be notified, and the drilling, deepening or modification of the well may not proceed.
2. Section § 45-596(D), provides that the Department has 15 days after the receipt of a complete and correct notice of intention to record the notice and mail the duplicate to the owner.
3. Fill out this form and site plan in DUPLICATE and send WITH $10.00 FEE to 500 N. 3rd St., Phoenix, AZ 85004. USE BLACK OR BLUE INK.
4. For specific instructions, limitations and conditions, see the reverse side of this form.
5. If the well is a replacement, deepening or modification of an existing well, provide the registration number of the existing well in item 2.
6. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well; a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-562944
File No. D(24-24)18 CAD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify/replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Toni M. Bergeman

APPLICATION GUIDELINES

In accordance with Arizona Revise Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 14 may be available from your driller.
4. Information to complete items 10 and 13 may be available from your County Assessor's Office.
5. An exempt well, referred to in Item 11, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute used primarily for domestic purposes, including the noncommercial irrigation of less than two acres of land.
6. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
7. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
8. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
9. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
10. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
11. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention, the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling company. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, including abandonment, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well; a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well; a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Director

NACO WATER CO
PO BOX 85160
TUCSON, AZ 85754

Registration No. 55-575700
File No.D(24-24) 18 CCA

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sylvia Valdez

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Receipt of this annotated Notice constitutes authorization to proceed in drilling, deepening, or modifying the well as set forth on this Notice.

2. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

3. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an INA or AMA to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 3 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to A.R.S. §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of A.R.S. §45-437.

5. Multiple Drinking Water Connections mean other parcels of land being served by your well that are not owned by you. Each separate parcel is considered one connection.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the issuance of the drilling authority.

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

10. If the proposed well is a non-exempt well and is located near the Colorado River and if the proposed well may pump Colorado River Water, proof must be submitted with this notice that the applicant has the legal right to use Colorado River Water. Alternately, evidence needs to be submitted that supports the contention that Colorado River water will not be withdrawn by the well. Persons near the Colorado River may wish to contact the Colorado River Management Division, Department of Water Resources at (602) 542-1960 to determine those Townships and Ranges which will be affected by these requirements or with questions regarding the proof of right.

File No. D(24-24)11ABC

Dear Mr. Osborn:

Enclosed is a copy of the Notice of Intention (NOI) to deepen a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized. **In no case may the replacement well be more than 660 feet from the well it is replacing.**

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

ENCLOSED

Per ARS §45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

If the information you provided indicates your well is near the Colorado River; if in the future, it is determined that water from your well is supplied from the river and you do not have a perfected water right to Colorado River water established prior to 1929, the U.S. Bureau of Reclamation may require you to cease pumping or enter into a contract for use of Colorado River water.

Sincerely,

Dorothy Boggs
Groundwater Permit Specialist

APPLICATION GUIDELINES

In accordance with Arizona Revised Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening, or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 13 may be available from your driller.
4. Information to complete items 9 and 12 may be available from your County Assessor's Office.
5. For item 10, in an Active Management Area, A.R.S § 45-454 only allows non-irrigation uses for "exempt" wells. If the proposed use includes the growing of 2 or more acres of plants for sale or human/animal consumption (irrigation use), the well does not qualify as an exempt well.
6. An exempt well, referred to in Item 10, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute and used for non-irrigation purposes.
7. For item 11, in an Active Management Area, A.R.S §45-454 allow up to 56 acre feet per year of pumping from a domestic (residential) or stock watering exempt well, and up to 10 acre ft per year from an exempt well used for other (usually commercial non-irrigation) purposes.
8. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
9. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
10. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
11. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
12. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
13. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you a written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling contractor. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal around the casing from the surface to a depth of twenty feet, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Monica Ortiz
Water Resource Technician

REQUEST FORM TO CHANGE WELL INFORMATION OWNERSHIP * DRILLER * VARIANCE

Please complete the appropriate section of this request form and return to P.O. Box 458, Phoenix, Arizona 85001-0458 or hand deliver to the above address with applicable fee. NOTE: A.R.S. §45-593.C requires that the Department be notified of change of well ownership and that the new owner is required to keep the Department's Well Registration records current and accurate. Well data and ownership changes must be submitted within thirty days after changes take place.

SAVE THIS FORM TO REPORT FUTURE CHANGES IN OWNERSHIP, CHANGES IN ADDRESS, OR CHANGE IN WELL DATA SUCH AS PUMP CAPACITY, CORRECTION OF LEGAL DESCRIPTION, CHANGE OF WELL DRILLER AND AMENDING INFORMATION PREVIOUSLY FILED.

1. CHANGE OF WELL INFORMATION: (NO FEE REQUIRED)

NOTE: If the location of the proposed well changes after drilling authority has been issued, attach a $10.00 reissue fee for each well.

WELL REGISTRATION NO. 55- 642937 FILE NO: _____

If known, I/We request the following well information be changed: LOCATION SHOULD BE D-24-24 12 CBD

Date 11/3/97 Signature of Current Well Owner [signature]

ENTERED FEB 13 1998

2. STATEMENT OF CHANGE OF WELL OWNERSHIP: ($10.00 FEE REQUIRED)

NOTE: If this change consists of more than one well and the names are common: attach a $10.00 fee. Otherwise, each well requires a separate fee of $10.00.

I, Bob Watkins, state that I am the Previous/(New Owner) of the well described below:

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	7	NW ¼	SW ¼	NW ¼

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 10-23-84 Signature of Person Filing John W Pool

DWR-55-41-10/83

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Completion Report to be filed with the Department within 30 days after installation of pump equipment.

2. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

3. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

4. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

LOCATION OF THE WELL

NW SW NW S29 T23S R24E .

Date Well Completed April 1982 Depth of Well 535

1. Well Test:

EXEMPT WELL
FILING FEE: $3.00

DEPARTMENT OF WATER RESOURCES
NOTICE OF INTENTION TO DRILL OR DEEPEN
AN EXEMPT WELL

EXEMPT WELL

Section 45-596, Arizona Revised Statutes, provides: A person may not drill or cause to be drilled any well or deepen or replace existing well without first filing a Notice of Intention to Drill with the Department on a form prescribed and furnished by the Department. The well shall be completed within one year after the date of Notice. An exempt well means a well having a pump with a maximum design capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An exempt well may include the non-commercial irrigation of not more than 1 acre of land.

APPLICATION GUIDELINES

In accordance with Arizona Revise Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 14 may be available from your driller.
4. Information to complete items 10 and 13 may be available from your County Assessor's Office.
5. An exempt well, referred to in Item 11, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute used primarily for domestic purposes, including the noncommercial irrigation of less than two acres of land.
6. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
7. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
8. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
9. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
10. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
11. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

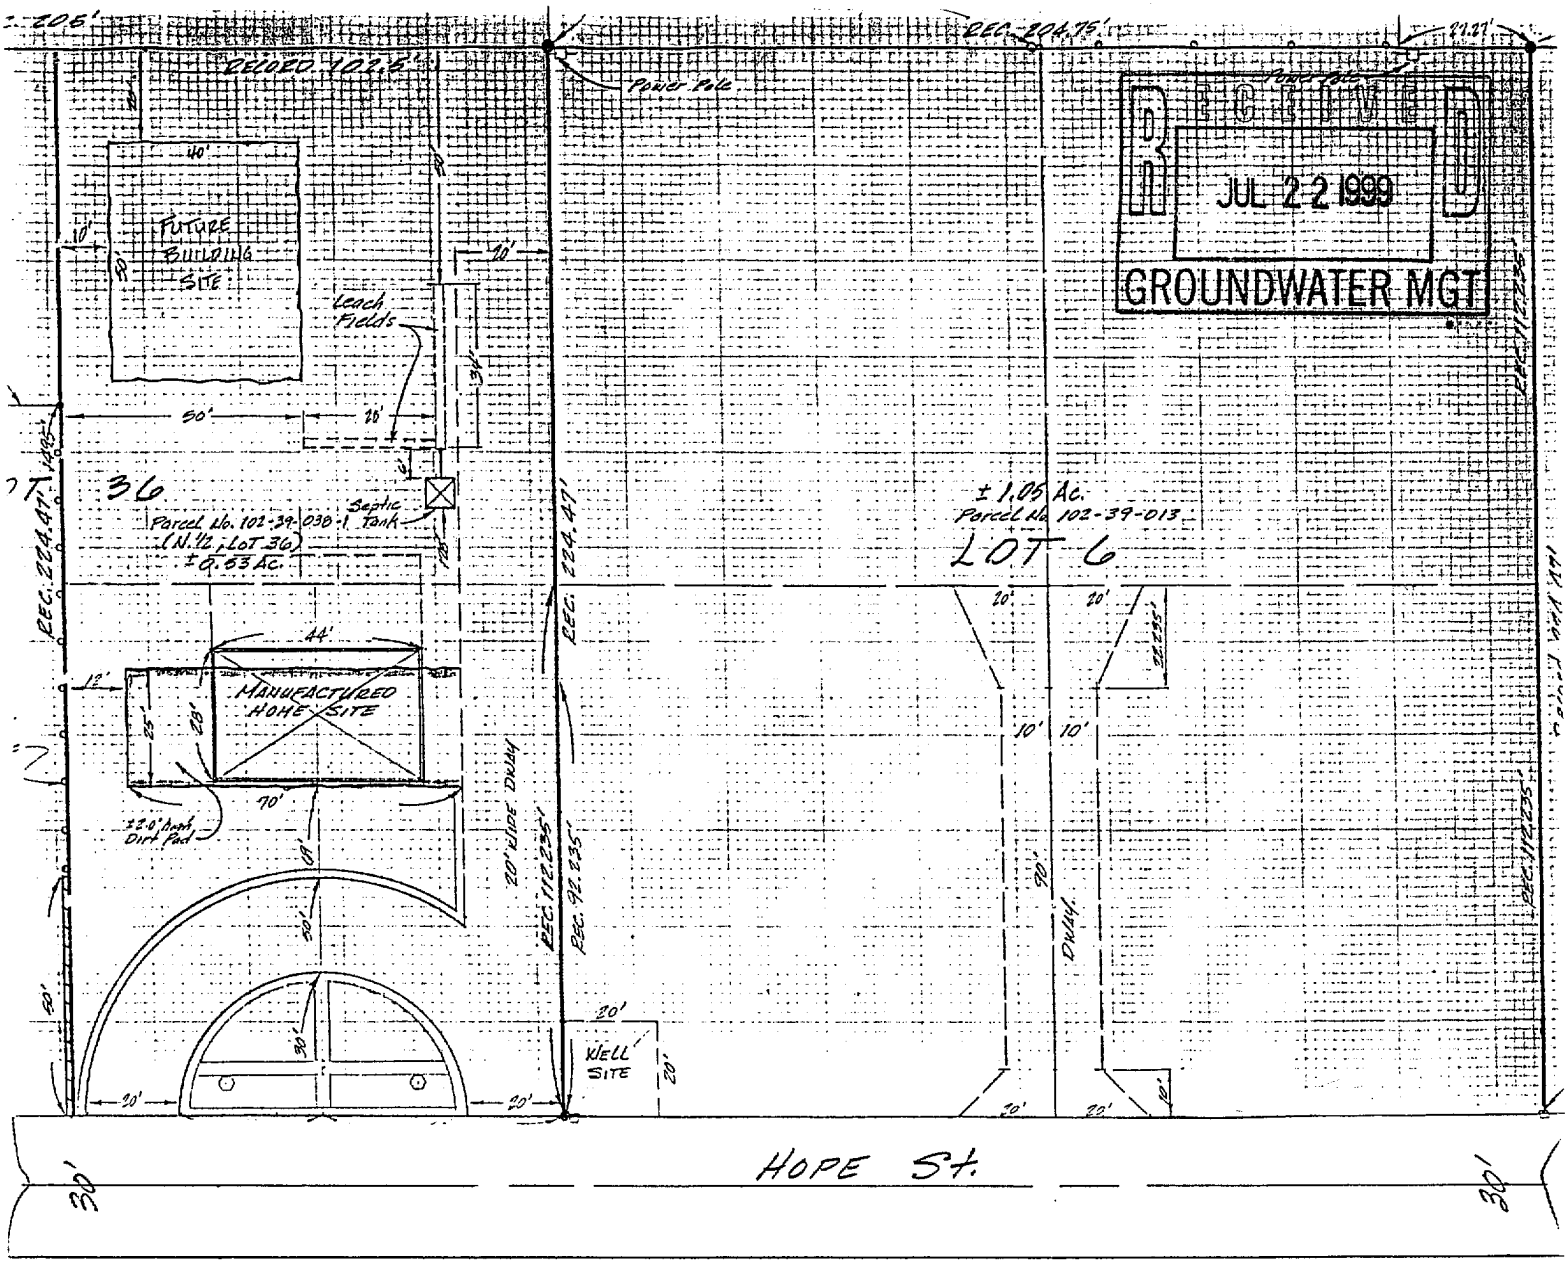
TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention, the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling company. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, including abandonment, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.



Site Plan of the N ½ of Lot 36 & Lot 6 of the Sunset Acres Subd. Located in the N.W. ¼, S.E. ¼ of Section 5, T. 24 S., R. 24 E., G. & S.R.M.

Registration No. 55-576415
File No.D(24-24) 5 DBB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Barbara Sims

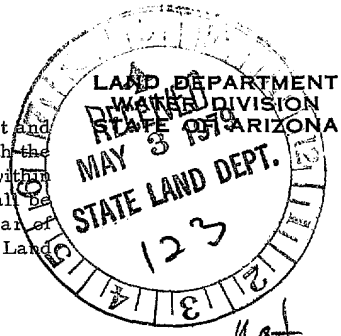
NOTICE OF INTENTION TO DRILL WELL



By Law, no person shall drill, or cause to be drilled, any well for the development and use of Ground Water in Arizona without first filing Notice of Intention to Drill with the State Land Department. The only exceptions are for those irrigation wells within critical Ground Water areas for which Drilling Permits are required. No well shall be drilled by other than the owner without the driller being licensed with the Registrar of Contractors. The driller's license number must be included before the State Land Department will process the filing.

Re: Drilling of Well

Gentlemen:

Water Rights Administration, Department of Water Resources, is engaged in the process of bringing its well files up to date. These files indicate that a drilling card to drill a well was issued to you under file number as stated on address label, a year ago, and that the well has not been reported as completed.

Arizona Revised Statutes 45-596, 45-599, and 45-600 deal with Drilling of Wells and Filing of Log and Completion Report by the Driller.

Critical information included in these statutes requires that:

1. A well must be completed within one year of filing. If the well is not completed within one year, a new filing shall be made before proceeding with further construction.

2. Upon completion of drilling, a copy of the Well Driller Report shall be filed by the Driller with this Department within 30 days of completion of drilling.

3. Within 30 days after installation of pumping equipment, a Completion Report (Equipment Installed) shall be filed with this Department.

In the event the referenced well has been completed, please forward the Well Drillers and Completion Report of Equipment Installed to this Department within 30 days.

If no response is forthcoming, we will assume that the well is not completed and the related file retired as cancelled.

Yours very truly,

DEPARTMENT OF WATER RESOURCES

Dear Sir:

This copy of Notice of Intention to Drill Well in Twp. 24 S, Rge. 24 E, Section 10, SW $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$, is returned to you for your file. Also enclosed are:

X WELL DRILLING CARD, which should be in the hands of the driller before construction of the well is started;

X REPORT OF WELL DRILLER form, which may be filled in by the driller but which you should make sure is mailed to us after completion of the well;

X REPORT OF EQUIPMENT INSTALLED form, which shall be filled in by you and sent to us after the installation of the pumping equipment;

____ DIAGRAMS of recommended cement grout seal and pump installation, supplied by the Department of Health.

In the event it is necessary to change the location of the proposed well, you should obtain the written permission of the State Land Commissioner before proceeding with the drilling.

Very truly yours,

State Land Commissioner

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Registration No. 55-216425
File No. D(24-24) 18 CCB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant t A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling. PLEASE NOTE The Authorization to drill this well **DOES NOT constitute or guarantee an approval to use the well for the purpose of withdrawing groundwater for transportation to an Active Management Area (AMA)** pursuant to A.R.S. § 45-55 45-553, 45-554 or 45-555(A). Groundwater **may not** be withdrawn from this well for these transportation purposes **without official prior approval from the Department.** Please contact the office in the AMA where the groundwater is to be transported to determine what additional forms are needed and for more information on this process.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drillir is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lo tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DW form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed i a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55 within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Toni Bergeman

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

APPLICATION GUIDELINES

In accordance with Arizona Revise Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 14 may be available from your driller.
4. Information to complete items 10 and 13 may be available from your County Assessor's Office.
5. An exempt well, referred to in Item 11, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute used primarily for domestic purposes, including the noncommercial irrigation of less than two acres of land.
6. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
7. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
8. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
9. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
10. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
11. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention, the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling company. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, including abandonment, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Registration No. 55-573596
File No.D(24-24) 18 ADC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Barbara Sims

Registration No. 55-216018
File No. D(24-24) 18 BCD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling. **PLEASE NOTE:** The Authorization to drill this well **DOES NOT constitute or guarantee an approval to use the well for the purpose of withdrawing groundwater for transportation to an Active Management Area (AMA)** pursuant to A.R.S. § 45-552, 45-553, 45-554 or 45-555(A). Groundwater **may not** be withdrawn from this well for these transportation purposes **without official prior approval from the Department.** Please contact the office in the AMA where the groundwater is to be transported to determine what additional forms are needed and for more information on this process.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Toni Bergeman

Notice of Intent to Drill, Deepen, Replace or Modify a Well
(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Re: Well Registry Number: 55-216018
File (Location) Number:

Dear Applicant:

The Department of Water Resources recently received your Notice of Intent (NOI) to Drill, Deepen, Replace or Modify a Well. However, our review indicates that the NOI is incomplete under the Groundwater Management Act for the following reason(s):

- **SECTION 1: COUNTY APPROVAL IS REQUIRED ON A PARCEL OF LAND OF 5 OR FEWER ACRES FOR WELLS BEING USED FOR DOMESTIC PURPOSES. UNDER SECTION 2 OF YOUR APPLICATION, THE NUMBER OF ACRES FOR THIS PARCEL WAS NOT ANSWERED. IF THE PARCEL OF LAND IS 5 OR FEWER ACRES, PLEASE COMPLETE ALL UNANSWERED QUESTIONS ON THE FORM AND FORWARD THE NOI FORM TO THE COCHISE COUNTY HEALTH AUTHORITY FOR APPROVAL.**
- **SECTION2: PLEASE COMEPLETE THE LEGAL DESCRIPTION OF THE WELL; WHICH IS THE TOWNSHIP, RANGE, SECTION AND 160, 40 AND 10 ACRE QUARTER LOCATION. IF THE WELL IS LOCATED IN AN ACTIVE MANAGEMENT AREA. AND THEREFORE, NEEDS AN AMA CERTIFICATION OF COMPLIANCE FORM "ARS 45-454 (C) & (D)". I HAVE ENCLOSED THE FORM SO PLEASE READ AND SIGN THE EXEMPT WELL CERTIFICATION OF COMPLIANCE FORM.**
- **SECTION 7: THE ANSWER FOR THE OUTER DIAMETER IS NOT CLEAR. PLEASE INDICATE THE NUMBER OF INCHES.**

IF YOU HAVE ANY QUESTIONS, PLEASE CALL DARLENE SUMPTER-KING AT 602-771-8646.

In accordance with Arizona Revised Statutes (A.R.S.) § 45-596, Paragraph D, the Department is mailing this "statement of determination" as a request for information necessary to make the NOI complete and correct. Please provide the Department with the additional information and resubmit the corrected NOI form and any attachments (if applicable) to ADWR. The Department's substantive review time frame is suspended until all requested information is provided. If the Department does not receive the necessary information within sixty (60) days, the application may be denied. You would then have to re-initiate the NOI process and pay a new filing fee to receive a drilling authority for this location.

WHEN RESUBMITTING THE COMPLETED FORM, RETURN TO:

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area.
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 4-1-87 Signature of Person Filing Richard Ross

DWR-55-41-8/86 (Revised)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

GENERAL INSTRUCTIONS

1. Fill out this form in duplicate and send to 99 East Virginia, Suite 100, Phoenix, Az. 85004.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen or replace a well outside of an Active Management Area
4. If the well is a replacement or deepening of an existing well, state the registration number of the existing well in Item 21.
5. Construction standards for new and replacement wells and the deepening and abandonment of existing wells shall be in accordance with Department Rules and Regulations.

I state that this Notice is filed in compliance with ARS 45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well set forth on the reverse side of this form.

DATE 4-2-87 Signature of Person Filing Richard Ross

DWR-55-41-8/86 (Revised)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Upon receipt of the return of this annotated Notice, the owner is authorized to proceed in drilling or deepening the well as set forth on this Notice.

2. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

3. Only one exempt well may be drilled or used to serve the same use at the same location.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 2 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to ARS §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of ARS §45-437.

5. The drilling or deepening of this well shall be completed within one (1) year of the date of this Notice.

6. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

7. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of the annotated copy of this Notice.

8. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

Registration No. 55-201531
File No. D(24-24) 3 ADA

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sharon Ward

RECEIVED DEC - 3 2003

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $50 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $50.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

GENERAL INSTRUCTIONS FOR FILING NOTICE WITH ADWR

1. Section §45-596(D) provides that the Director shall determine that all information required on this form has been submitted. If not, the person filing will be notified, and the drilling, deepening or modification of the well may not proceed.
2. Section §45-596(d) provides that the Department has 15 days after the receipt of a complete and correct notice of intention to record the notice and mail duplicate to owner. Drill card will be mailed directly to drilling firm as stated in item #14.
3. Please mail two original notices with original signatures, a site plan in DUPLICATE, and a check or money order (no cash) in the amount of $10.00 to P.O. Box 458, Phoenix, Arizona 85001-0458 or hand deliver to 500 North Third Street, Phoenix, Arizona 85004-3903. USE BLACK OR BLUE INK.
4. If the well is a replacement, deepening or modification of an existing well, provide the registration number of the existing well in item 2.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.

RECEIVED NOV 4 1996 GROUNDWATER MGT

I State that this Notice is filed in compliance with A.R.S. §§45-595 and 45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations and conditions set forth on the reverse side of this form.

DON CAMPBELL | [signature] | 10/4/96
Typed or Printed Name and Title | Signature [ ] Land Owner [ ] Lessee of Wellsite, Title | Date

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Pursuant to Section §45-596, Arizona Revised Statutes, provides: a person may not drill, deepen, or modify any well, without first filing a Notice of Intention to Drill with the Department.
2. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in §45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.

   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.

   c. Shall demonstrate to the Director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.

   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

3. Endorsement by the county/local authority is based on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

4. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in section §45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

5. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

6. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

7. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§45-596.E.).

8. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

9. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

10. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-643481
File No. D(24-24)11 CDB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify/replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sylvia Valdez
Water Resource Technician

COMPLETION REPORT
(Pump Installation Report)

1. **Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.**

2. **Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation. For a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.**

3. **The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.**

4. **The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.**

10/7/96 — Date

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Pursuant to Section §45-596, Arizona Revised Statutes, provides: a person may not drill, deepen, or modify any well, without first filing a Notice of Intention to Drill with the Department.

2. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in §45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.

   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.

   c. Shall demonstrate to the Director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.

   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement

3. Endorsement by the county/local authority is based on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

4. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in section §45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

5. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

6. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

7. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§45-596.E.).

8. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

9. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

10. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-643481
File No. D(24-24)11 CDB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify/replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sylvia Valdez

Bisbee, Arizona 85603

Dear Mr. Baker:

We wrote to you on March 24, 1983, June 24, 1983 and again on July 21, 1983 regarding your well registration. We know that you did, in fact, register your well, but we do not have a copy of the well registration in our files. Until we have a copy of the registration form, we are not able to input the information into our computer.

We are enclosing a set of the well registration forms for your use in the event that you are not able to locate a copy of the original form. Please complete the forms and return two copies to us. We will complete both copies and return one copy to you for your files.

The Groundwater Management Act passed on June 12, 1980 states that a person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing in duplicate with the Department of Water Resources. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

For your future use, a Change of Well Information form will be enclosed should it become needed. Per A.R.S. 45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate.

Yours truly,

Marge Watson

Mr. Baker
801 Border Rd.
Bisbee, Arizona 85603

Dear Mr. Baker:

We are in the process of purifying the 51,953 wells that were registered to comply with the Arizona Groundwater Management Act that was passed on June 12, 1980. Of these 51,953 wells registered, only 24 problem areas remain.

Our review indicates that we inadvertently did not keep a copy of your well registration form or that we simply lost it. We wrote to you on March 24, 1983 and again on June 24, 1983, asking for your help in obtaining a copy for our empty file folder. In order to input the information on your well into our computer and thus to assure that you were timely filed and in compliance with the law, we must have a copy of the form with our stamp which shows the original date received.

Your cooperation in this matter will be greatly appreciated and again we apologize for any inconvenience this may have caused you.

If you have any questions, please contact me at the above address or call at 602-255-1581.

Sincerely,

Marge Watson

Dear Mr. Baker:

In regard to the above referenced Registration of Existing Well file, it appears that we have no copy of the Well Registration for our files.

Please send us a copy of the Registration form which was returned to you.

If you have any questions, please contact me at the above address or at 602-255-1581.

Sincerely,

Marge Watson

DEAR MR BAKER:

Recently, in reviewing our files, it has been discovered that your application for well registration is missing from the folder. In order to assure your best interests, it is necessary for us to retain a copy of your application for our files for future reference.

Kindly send us a copy for our records. I am enclosing a stamped addressed envelope for your use.

I anticipate your cooperation and greatly appreciate it.

May I apologize for any inconvenience this may cause you.

File No. D(23-24) 31 CCC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Monica Phillips

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $100 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice a check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $100.00 if the well will be used solely for domestic purposes (see page 3 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

** PLEASE PRINT CLEARLY **

SECTION 7. PROPOSED WELL CONSTRUCTION DESIGN (attach separate sheet if needed)

DATE CONSTRUCTION IS TO BEGIN:

Borehole			Casing													
DEPTH FROM SURFACE			DEPTH FROM SURFACE			MATERIAL TYPE (T)				PERFORATION TYPE (T)						
FROM (feet)	TO (feet)	BOREHOLE DIAMETER (inches)	FROM (feet)	TO (feet)	OUTER DIAMETER (inches)	STEEL	PVC	ABS	IF OTHER TYPE, DESCRIBE	BLANK OR NONE	WIRE WRAP	SHUTTER SCREEN	MILLS KNIFE	SLOTTED	IF OTHER TYPE, DESCRIBE	GROUTING MATERIAL
0	19	12 1/4	+1	19	8 5/8	X*				✓						Cement
19	700	6 3/4	0	600	5"		X			✓						
			600	700	5"		X							✓		

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, The completion report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation. For a flowing well the shut-in presssure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.
   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.
   c. Shall demonstrate to the director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.
   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

2. Endorsement by the county/local authority is based solely on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in § 45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

4. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

5. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§ 45-596.E.).

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Dear Applicant:

We are recently in receipt of your filing an (NOI) to drill/deepen/replace/modify a well. However, our review indicates that the filing(s) is incomplete under the Groundwater Management Act for the following reason(s):

Please complete all highlighted areas.

If the parcel on which the well is to be located is 20 acres or less, the NOI's, along with a site plan is required to go to the county for approval before being submitted to ADWR for processing.

Until clarification, or correction, no further action can be taken by this Department pending receipt of information that completes the application, as indicated above.

Sincerely,

Dorothy Boggs

July 25, 1995

Dear Well Applicants, Well Drillers and Health Officials:

This letter is being directed to all parties that may potentially be impacted by a revision of A.R.S. § 45-596. This statute requires an applicant to file a notice of intention to drill a well and receive authority from the Department of Water Resources before commencing to drill. The revision in the statute became effective July 17, 1994.

The revision pertains to all new wells that will provide **ANY** water for domestic purposes on parcels of land of twenty (20.0) acres or less. Domestic purposes is defined in A.R.S. § 45-454.I.1. Essentially it means uses related to the supply, service and activities of households and private residences.

To assist well applicants, well drillers and health authorities to transition to the revised procedure, the Department has revised its Notice Of Intention (NOI) to drill form, developed a brochure to provide information about the change and provided this letter to explain procedures to be followed.

An individual supply of the new forms and the brochure are being included with this letter. Please take a moment to review them. The brochure can be copied and recopied as much as anyone wishes because its only purpose is to be a source of information.

The NOI must be completed and filed **in duplicate**, with **both** sides of the form on the same sheet of paper. This is because there are conditions and restrictions on the back of the form that the applicant is attesting to by their signature. Improper or incomplete NOI forms will be returned without action. Faxed copies will not be accepted because: 1) the fee must accompany the filing; 2) the signature on the form must be the original signature of the landowner or lessee; 3) a fax can not meet the requirement of having both sides of the form on the same sheet of paper.

The filing fee that is required to be paid to the Department must accompany the NOI. **A check or money order, made payable to the AZ Dept of Water Resources (ADWR), in the amount of $10.00** must be attached to the duplicate NOIs and the site plan when they are submitted to the appropriate county or local health authority.

The duplicate NOIs and the site plan will be filed with the appropriate county or local health authority. The name, address and phone number of those places for filing are on the back of the brochure. That authority will review and endorse the NOI and site plan and forward it to DWR. In some cases, DWR may have to request further information from the applicant before issuing authority to drill.

A NOI claiming a parcel size of over 20 acres, and exemption from county or local authority review, must still provide the parcel number and parcel size. DWR will verify that information with the appropriate county assessor before issuing authority to drill.

Beginning July 18, 1994, the following Notice Of Intention forms become obsolete and will no longer be accepted by ADWR:

1. NOI to Drill an Exempt Well In An Active Management Area.
2. NOI to Drill a well Outside Of An Active Management Area.

Notice Of Intention forms not affected by the revised law are:

1. NOI to Drill Monitor/Piezometer Well.
2. NOI to Drill and Abandon Exploration Well(s).
3. NOI to Deepen, Replace or Modify an Existing, Non Exempt Well At Approximately the Same Location In An Active Management Area.
4. NOI to Abandon a Well
5. Notice of Well Capping.

For an additional supply of NOI forms, call Liz Choukalas at (602) 417-2470.

Sincerely,

Lawrence A. Ramsey

Registration No. 55-557742
File No. D(23-24)31BAD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593(C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Ellen Kane

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

0	20	8 5/8	X*				X						Cement
10	260	6		X			X						
260	300	6		X							X		

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Re: Well Registry Number: 55-210865
File (Location) Number: D(24-24)18

Dear Applicant:

The Department of Water Resources recently received your Notice of Intent (NOI) to Drill, Deepen, Replace or Modify a Well. However, our review indicates that the NOI is incomplete under the Groundwater Management Act for the following reason(s):

- **NEED ALL QUARTERS SEE ATTACHED SHEET FOR BREAKDOWN OR CONTACT YOUR COUNTY ASSESSORS OFFICE FOR THIS INFORMATION.**

PLEASE CALL MONICA ORTIZ AT 602-771-8643 WITH ANY QUESTIONS.

In accordance with Arizona Revised Statutes (A.R.S.) § 45-596, Paragraph D, the Department is mailing this "statement of determination" as a request for information necessary to make the NOI complete and correct. Please provide the Department with the additional information and resubmit the corrected NOI form and any attachments (if applicable) to ADWR. The Department's substantive review time frame is suspended until all requested information is provided. If the Department does not receive the necessary information within sixty (60) days, the application may be denied. You would then have to re-initiate the NOI process and pay a new filing fee to receive a drilling authority for this location.

ATTACH THIS NOTICE WHEN RESUBMITTING THE COMPLETED NOI AND RETURN TO:

WATER MANAGEMENT SUPPORT SECTION
PO BOX 458
PHOENIX, ARIZONA 85001-0458

YOU MAY ALSO CONTACT YOUR DRILLER OR COUNTY ASSESSOR'S OFFICE FOR ASSISTANCE PERTAINING TO THE NECESSARY INFORMATION THAT IS REQUIRED TO COMPLETE YOUR APPLICATION.

Governor

Herbert R. Guenther
Director

ROBERT & ELIZABETH SCHWARTZ
2003 BRUSH WOOD DR
SIERRA VISTA, AZ 85650

Registration No. 55-210865
File No. D(24-24) 18 ADC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Monica Ortiz

COMPLETION REPORT
(Pump Installation Report)

A. Per A.R.S. § 45-600.B, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

B. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operations. For a flowing well the shut-in pressure should be measured in feet above the land surface or in pounds per square inch at the land surface.

C. The static groundwater level should be measured in feet from the land surface immediately prior to the capacity test.

D. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well be measuring the natural flow at the land surface.

E. Items 1 and 2 are available from the Notice of Intent to Drill.

F. Items 3 and 4 may be available from the driller.

1. REGISTRATION NO: 55- 588270 **FILE NO:** D(24-24)17 BCB

APPLICATION GUIDELINES

In accordance with Arizona Revised Statutes ("A.R.S.") §§ 41-1008 and 1079, the Department of Water Resources (Department) provides the following information regarding the application review process for authority to drill.

NECESSARY STEPS & INSTRUCTIONS TO OBTAIN DRILLING AUTHORITY

1. Pursuant to A.R.S. § 45-596, a person may not drill, cause to be drilled, deepen or modify any well for which a permit is not required without first filing a Notice of Intent to Drill with the Department. Only a well drilling contractor licensed in the State of Arizona or a single well licensee (a person licensed to drill or modify one exempt well on his or her own property) is authorized to drill, deepen or modify a well. Drilling may not begin until the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, and which authorizes the drilling of the specific well in a specific location. To assist you in understanding the requirements for this application, copies of A.R.S. § 45-596 and Arizona Administrative Code ("A.A.C.") R12-15-810 are available at the Department bookstore (602-417-2450 x7127).
2. If replacing, deepening, or modifying an existing well, provide the registration number of the existing well in item 2. A replacement well is one located no more than 660 feet from the original well and that is not expected to annually withdraw more groundwater than historically withdrawn from the original well.
3. Information to complete items 3, 4, 5 and 13 may be available from your driller.
4. Information to complete items 9 and 12 may be available from your County Assessor's Office.
5. For item 10, in an Active Management Area, A.R.S § 45-454 only allows non-irrigation uses for "exempt" wells. If the proposed use includes the growing of 2 or more acres of plants for sale or human/animal consumption (irrigation use), the well does not qualify as an exempt well.
6. An exempt well, referred to in Item 10, means a well with a pump with a maximum capacity of not more than thirty-five gallons per minute and used for non-irrigation purposes.
7. For item 11, in an Active Management Area, A.R.S §45-454 allow up to 56 acre feet per year of pumping from a domestic (residential) or stock watering exempt well, and up to 10 acre ft per year from an exempt well used for other (usually commercial non-irrigation) purposes.
8. If any water from a proposed well on a parcel of twenty or fewer acres will be used for domestic purposes, as defined in § 45-454, the applicant must submit a well site plan of the property. The plan must be on an 8½" x 11" piece of plain paper with representation of the locations of all structures and proximity of adjacent lot lines, to scale. It must include the county assessor's parcel identification number. The plan must show the proposed well location and the location of any septic tank or sewer system that is either located on the property or within one hundred feet of the proposed well site, as well as indicating the measured shortest distance between the proposed well and existing septic tank system. **The plan must demonstrate that the well will not be drilled within one hundred feet of any septic or sewer system.**
9. The site plan must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Endorsement by the county/local authority is based solely on the best available judgement that the proposed well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. In areas where there is no local or county authority that controls installation of septic tanks or sewer systems, or if the health authority is unable to determine whether the proposed well location complies with state and local requirements, the applicant must apply for approval directly to the Department of Water Resources.
10. If an individual other than the land owner or lessee signs this notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific notice on his or her behalf, must accompany the notice.
11. Please mail **two original Notices** with **original signatures** and **two site plans** and, in accordance with A.R.S. § 45-113, a **check or money order (no cash) in the amount of $10.00** to P. O. Box 458, Phoenix Arizona, 85001-0458, or hand deliver to 500 North Third Street, Phoenix, Arizona.
12. Arizona Revised Statute § 45-596(D) provides that the Director of the Department is to determine whether or not all information required on this form has been submitted. If not, the person filing the Notice will be notified, and the drilling or modification of the well may **not** proceed.
13. This form is not applicable for non-exempt wells (those yielding more than thirty-five gallons per minute) within an Active Management Area. Contact Groundwater Management for further information regarding the appropriate notice to file with the Department.

TIME FRAME FOR REVIEW OF YOUR APPLICATION

Within 15 days after receipt of your Notice of Intention the Arizona Department of Water Resources ("Department") will determine whether your application should be granted or denied, unless this time is extended for lack of a complete application. If your application is incomplete, the Department will notify you in writing and will specify what information is necessary to make the application complete. Until the missing information is received, the time frame for review of your application will be suspended. Your application will not be complete until all of the requested information is received. If you do not supply the missing information within sixty (60) days, the Department may deem your application withdrawn and close the file.

At the end of its review, the Department will send you a written notice either granting or denying your application for drilling authority. If your application is approved, the Drill Card will be mailed directly to the drilling contractor. If denied, the Department's notice will state justification for the denial and an explanation of your right to appeal.

CONSTRUCTION AND FOLLOW UP REQUIREMENTS

1. Construction and abandonment standards for wells, must be in accordance with Department Regulations. A.R.S. § 45-594 and Arizona Administrative Code R12-15-811 require the well to be constructed with a twenty foot steel surface seal casing, including a one foot steel stickup and one and one-half inches of grout seal around the casing from the surface to a depth of twenty feet, unless a variance is granted **(see A.R.S. § 45-596 (G) for procedure to follow in requesting a variance).**
2. Pursuant to § 45-596(E), the drilling, deepening or modification of the well must be completed within one year of the date of the Notice of Intent. If the well is not completed within one year, a new Notice of Intent must be filed before proceeding with further construction.
3. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use is later proposed to be converted to use for domestic purposes as defined in § 45-454, the well owner must file a Notice of Intention to Drill and comply with the requirements of § 45-596 before the well is converted and any water from that well is used for domestic purposes.
4. Within thirty days after installation of pumping equipment, the registered well owner must file a Completion Report with the Department. The person to whom a well is registered also must notify the Department of a change in ownership or a change in data relating to this well.

Registration No. 55-588270
File No. D(24-24) 17 BCB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Toni Bergeman

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

material *Bentonite Seal* method *Tremie* from *20* feet to *925* fe

f) Filter packs (state material):

material *8 - 12 Mesh Silica Sand* from *925* feet to *1030* fe
material from feet to fe

g) Perforations or screen specifications:

Type *4-inch fiberglass wire wrap, 0.040-inch slots* from *930* feet to *1010* fe
Type from feet to fe

h) Method of well development (bail, air lift, surge) *Air Lift, Surge*

i) Will surface or conductor casing extend above grade?: Yes *X* No

19. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one year after the date of Notice.

III. A Well Driller Report is required within thirty days of completion of drilling. A Completion Report is required to be filed with th Department within thirty days after installation of pump equipment for monitor wells.

IV. Pump equipment <u>may not</u> be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited the maximum amount required for monitor purposes, <u>but in no case may exceed 35 gallons per minute and an annual volume of 1 acre feet total</u>.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casin Identification information will include well registration number."

VI. Special construction standards required pursuant to A.A.C. Rule R12-15-821:

RE: Registration No. 55-564726 THRU 55-564730
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

RE: Registration No. 55-564726 THRU 55-564730
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

RE: Registration No. 55-565004 THROUGH 55-565005
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Toni M. Bergeman

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

RE: Registration No. 55-565004 THROUGH 55-565005
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

REGISTRATION NO: 55- 564726 **FILE NO:** D(23-24) 27 dq 6

LOCATION OF THE WELL:

23	24	27	¼ NW	¼ NE	¼ SE
Township	Range	Section	10-acre	40-acre	160-acre

EQUIPMENT INSTALLED:

Kind of pump: Submersible
(Turbine, submersible, centrifugal, etc.)

Kind of power: Elect (Electric, natural gas, gasoline, etc.) H.P. Rating of Motor: 1/2

Pumping Capacity: 4.5 Date Pump Installed: 1/19/98

WELL TEST:

Test pumping capacity: 7.5 GPM (Gallons per minute) Date Well Tested: 1/19/98

Method of Discharge Measurement: Flow determined by filling measured container
(Weir, orifice, current meter, etc.)

Static Groundwater Level: 133 ft. Drawdown: 49 ft.

Total Pumping Lift: 205 ft. Drawdown: _____ lbs.
(Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air Rotary

b) Borehole diameters: 14.75 inches from 0 feet to 20 feet.
7.875 inches rom 20 feet to 210 feet.

c) Casing materials (PVC), steel, hollow-stem auger, etc.)

material Low Carbon Steel diameter 10 inches from 0 feet to 20 fe
material Schedule 80 PVC diameter 4.5 inches from 0 feet to 210 fe

d) Method of sealing at reductions N/A

e) Annular seal materials (cement, grout, etc.,); method of placement (tremied, circulated):

material Cement Grout method Tremie from 0 feet to 20 fe
material Bentonite Seal method Tremie from 20 feet to 150 fe

f) Filter packs (state material):

material 8-12 Mesh Silica Sand from 150 feet to 210 fe
material from feet to fe

g) Perforations or screen specifications:

Type 4.5-inch Schedule 80 PVC, wire wrap 0.040-inch slots from 160 feet to 200 fe
Type from feet to fe

h) Method of well development (bail, air lift, surge) Air Lift, Surge

i) Will surface or conductor casing extend above grade?: Yes X No

19. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one year after the date of Notice.

III. A Well Driller Report is required within thirty days of completion of drilling. A Completion Report is required to be filed with th Department within thirty days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited the maximum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual volume of 1 acre feet total.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casin Identification information will include well registration number."

VI. Special construction standards required pursuant to A.A.C. Rule R12-15-821:

RE: Registration No. 55-564726 THRU 55-564730
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

material Low Carbon Steel diameter 10 inches from 0 feet to 20 fe
material Fiberglass diameter 4 inches from 0 feet to 1030 fe

d) Method of sealing at reductions N/A

e) Annular seal materials (cement, grout, etc.,); method of placement (tremied, circulated):

material Cement Grout method Tremie from 0 feet to 20 fe
material Bentonite Seal method Tremie from 20 feet to 925 fe

f) Filter packs (state material):

material 8 - 12 Mesh Silica Sand from 925 feet to 1030 fe
material from feet to fe

g) Perforations or screen specifications:

Type 4-inch fiberglass wire wrap, 0.040-inch slots from 930 feet to 1010 fe
Type from feet to fe

h) Method of well development (bail, air lift, surge) Air Lift, Surge

i) Will surface or conductor casing extend above grade?: Yes X No

19. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one year after the date of Notice.

III. A Well Driller Report is required within thirty days of completion of drilling. A Completion Report is required to be filed with th Department within thirty days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited t the maximum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual volume of 1 acre feet total.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casin Identification information will include well registration number."

VI. Special construction standards required pursuant to A.A.C. Rule R12-15-821:

RE: Registration No. 55-564726 THRU 55-564730
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation. For a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

RE: Registration No. 55-562554
File No. D(23-24)10CBC

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Dorothy Boggs

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation. For a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

REGISTRATION NO: 55- 562555 **FILE NO:** D(23-24) 3CCC

LOCATION OF THE WELL:

23 N/S	24 E/W	3	¼ SW	¼ SW	¼ SW
Township	Range	Section	10-acre	40-acre	160-acre

EQUIPMENT INSTALLED:

Kind of pump SUBMERSIBLE (Turbine, submersible, centrifugal, etc.) Kind of power ELECTRIC (Electric, natural gas, gasoline, etc.)

H.P. Rating of Motor 1 1/2 HP Pumping Capacity 6.5 Date Pump Installed 6/26/97

WELL TEST:

Test pumping capacity 6.1 Gallons per minute Date Well Tested: 7-10-97

Method of Discharge Measurement FLOW DETERMED BY FILLING MEASURED CONTAINER (Weir, orifice, current meter, etc.)

Static Groundwater Level 158.85 ft. Drawdown 8.5 ft.

Total Pumping Lift 195' ft. Drawdown _____ lbs. (Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

GENERAL INSTRUCTIONS

Fill out this form in duplicate and mail to Department of Water Resources, Suite 400, 99 East Virginia, Phoenix, Arizona 85004. Filing fee must accompany Notice.

I state that this Notice is filed in compliance with Rule R12-15-809 and is complete and correct to the best of my knowledge and belief and that I understand the conditions set forth on the reverse side of this form.

DATE 6-19-89 Donald A. Stallwell
Signature of Applicant

13. Is this well to monitor existing contamination? No Potential contamination? No

Please explain Future groundwater permit

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? None

If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:

10 inches from 0 feet to 200 feet

6 inches from 200 feet to 300 feet

____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):

material Steel diameter 6 inches from 0 feet to 200 feet

material PVC diameter 4 inches from 0 feet to 300 feet

material ____ diameter ____ inches from ____ feet to ____ feet

d.) Method of sealing at reductions None

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)

material Grout method Poured from 0 feet to 200 feet

material ____ method ____ from ____ feet to ____ feet

material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):

material None from ____ feet to ____ feet

material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):

type Uncertain from 250 feet to 300 feet

type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) ____

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

Include detailed construction diagram, if available.

Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X

If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one (1) year after the date of Notice.

III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.

V. Special construction standards required pursuant to R12-15-821: ____

COMPLETION REPORT TM-19 monitor

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill an exploration well which was recently filed with this Department. This is returned to you as evidence of compliance with A.R.S. §45-596. Your designated driller has been mailed separately a Well Drilling Card which he is required to have in his possession before commencing to drill the well.

[X] Since this well is being drilled as a monitor well, or for cathodic protection, grounding, geotechnical or piezometer purposes, our standard driller report form is also being furnished to the driller which he is required to complete and return to the Department within 30 days after the completion of drilling. A Completion Report form is being furnished for monitor wells where pump equipment is authorized to be installed as part of this packet so that you may submit the report within 30 days after the installation of pumping equipment on a monitor well as required by A.R.S. §45-600.

[ ] This well is authorized to be drilled for mineral exploration purposes. Because of this, no pump equipment may be installed. A Project Completion Report is being furnished your designated driller for each hole to be drilled. Your driller is required to submit this Project Completion Report within 30 days after completion of drilling. You should insist that this is done.

For monitor, geotechnical, cathodic protection, grounding and piezometer wells, you should obtain the written permission of the Department of Water Resources before proceeding with the drilling in the event that you determine it necessary to change the location of the proposed well. A properly signed amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

For your future use, a Change of Well Information form is enclosed should it become needed. Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, including abandonment, in order to keep the well registration file current and accurate.

Sincerely,

R. A. Gessner
Chief, Operations Division

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

OCT 1988 HYDROLOGY APPROVED

13. Is this well to monitor existing contamination?_____ Potential contamination?____
Please explain Deep geologic observation well

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? R. Kennett, J. DuBois
If construction plans have been coordinated with Az. Dept. Water Resources; Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:

10 inches from 0 feet to 20 feet
6 inches from 20 feet to 700 feet
____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):

material Steel diameter 6 inches from 0 feet to 20 feet
material Steel diameter 4 inches from 20 feet to 300 feet
material PVC diameter 4 inches from 300 feet to 700 feet

d) Method of sealing at reductions Welding

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)

material Grout method Poured from 0 feet to 20 feet
material ____ method ____ from ____ feet to ____ feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):

material None from ____ feet to ____ feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):

type Factory slotted PVC from 650 feet to 700 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821:____

Signature of Applicant

13. Is this well to monitor existing contamination? Yes Potential contamination? ____
Please explain SO_4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? None
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
10 inches from 0 feet to 20 feet
6 inches from 20 feet to 180 feet
____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 6 inches from 0 feet to 20 feet
material PVC diameter 4 inches from 0 feet to 180 feet
material ____ diameter ____ inches from ____ feet to ____ feet

d) Method of sealing at reductions None

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material ____ method ____ from ____ feet to ____ feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ____ feet to ____ feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 130 feet to 180 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ____

COMPLETION REPORT Tm-16

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	10	NE NW SE
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump *Submersible*
Turbine, centrifugal, etc.

Kind of power *Electric* H.P. Rating of Motor *3/4 HP*
Electric, natural gas, gasoline, etc.

Pumping Capacity _____ Date installed *1/14/89*
Gallons per minute

WELL TEST:

Test pumping capacity *19.3 GPM* Date Well Tested *1/14/89*
Gallons per minute

Method of Discharge Measurement *timed volume*
Weir, orifice, current meter, etc.

Static Groundwater Level *78.6'* ft. Drawdown *.6'* ft.

Total Pumping Lift *79* ft. Drawdown _____ lbs
(Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ___

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	7	SW NW NW
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump: Submersible (Turbine, centrifugal, etc.)

Kind of power: Electric (Electric, natural gas, gasoline, etc.) H.P. Rating of Motor: 3/4 HP

Pumping Capacity: _____ (Gallons per minute) Date pump installed: 2/10/89

WELL TEST:

Test pumping capacity: 13.1 GPM (Gallons per minute) Date Well Tested: 2/10/89

Method of Discharge Measurement: timed volume (Weir, orifice, current meter, etc.)

Static Groundwater Level: 178.25 ft. Drawdown: 5.85' ft.

Total Pumping Lift: 184.1 ft. Drawdown: _____ lbs. (Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

Signature of Applicant

13. Is this well to monitor existing contamination? Yes Potential contamination? ___
Please explain SO4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? None
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
10 inches from 0 feet to 20 feet
6 inches from 20 feet to 230 feet
___ inches from ___ feet to ___ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 6 inches from 0 feet to 20 feet
material PVC diameter 4 inches from 0 feet to 230 feet
material ___ diameter ___ inches from ___ feet to ___ feet

d.) Method of sealing at reductions ___

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material ___ method ___ from ___ feet to ___ feet
material ___ method ___ from ___ feet to ___ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ___ feet to ___ feet
material ___ from ___ feet to ___ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 180 feet to 230 feet
type ___ from ___ feet to ___ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ___

13. Is this well to monitor existing contamination? Yes Potential contamination? ____
Please explain SO_4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? None
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
10 inches from 0 feet to 20 feet
6 inches from 20 feet to 200 feet
____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 6 inches from 0 feet to 20 feet
material PVC diameter 4 inches from 0 feet to 200 feet
material ____ diameter ____ inches from ____ feet to ____ feet

d.) Method of sealing at reductions ____

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material ____ method ____ from ____ feet to ____ feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ____ feet to ____ feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 150 feet to 200 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

7. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ____

COMPLETION REPORT TM-12

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	20	NW NE NW
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump *Submersible*
Turbine, centrifugal, etc.

Kind of power *Electric* H.P. Rating of Motor *3/4 HP*
Electric, natural gas, gasoline, etc.

Pumping Capacity _____ Date installed *2/05/89*
Gallons per minute

WELL TEST:

Test pumping capacity *12.7 GPM* Date Well Tested *2/05/89*
Gallons per minute

Method of Discharge Measurement *timed volume*
Weir, orifice, current meter, etc.

Static Groundwater Level *128.5* ft. Drawdown *1* ft.

Total Pumping Lift *129.5* ft. Drawdown _____ lbs
(Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

13. Is this well to monitor existing contamination? Yes Potential contamination? ____
Please explain SO_4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? R. Kennett, Jim DuBois
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
10 inches from 0 feet to 20 feet
6 inches from 20 feet to 160 feet
____ inches from ____ feet to ____ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 6 inches from 0 feet to 20 feet
material PVC diameter 4 inches from 0 feet to 120 feet
material ____ diameter ____ inches from ____ feet to ____ feet

d) Method of sealing at reductions None

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material ____ method ____ from ____ feet to ____ feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ____ feet to ____ feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 110 feet to 160 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ____

RE: Well Registration No. 55-522815
Well File No. D(24-24)18AAB

Dear Mr. Poinke:

After our phone conversation of this morning, I was able to have the file sent up from records and I have reviewed it. The file is complete, to include its transfer from Phelps Dodge to Loren F. Brewer in 1991.

From the file, I am including copies of the well driller's log, the completion report and the change of ownership. If you purchase the property, it will be necessary for you to complete the change of well information and the change of ownership portions of the enclosed form and return it, along with your check for $10.00 to get the well records into your name and reflect your current address. To complete the change of well information portion, you are requesting that the purpose of the well be changed from Monitoring to Domestic.

To accomplish that, you must file a notice of intention (form enclosed) and have the Cochise County Environmental Health Department sign off on a site plan of the location of the well and any septic system, or other hazardous item on your property or adjacent property.

Sincerely,

Lawrence A. Ramsey
Manager
GW MGT SPT

COMPLETION REPORT TM-10

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

COMPLETION REPORT

1. Per **A.R.S. §45-600**, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	1	SW SW SW
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump: Submersible
(Turbine, centrifugal, etc.)

Kind of power: Electric (Electric, natural gas, gasoline, etc.) H.P. Rating of Motor: 3 HP

Pumping Capacity: 7 (Gallons per minute) Date pump installed: 1/20/89

WELL TEST:

Test pumping capacity: 7* (Gallons per minute) Date Well Tested: 2/18/89

* Broke suction after 20 minutes.

Method of Discharge Measurement: Timed volume
(Weir, orifice, current meter, etc.)

Static Groundwater Level 591 ft. Drawdown 207 ft.

Total Pumping Lift 798 ft. Drawdown _____ lbs. (Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

Signature of Applicant

13. Is this well to monitor existing contamination? Yes Potential contamination? ___
Please explain SO_4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? R. Kennett, J. DuBois
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? None

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
10 inches from 0 feet to 20 feet
6 inches from 20 feet to 200 feet
___ inches from ___ feet to ___ feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 6 inches from 0 feet to 20 feet
material PVC diameter 4 inches from 20 feet to 200 feet
material ___ diameter ___ inches from ___ feet to ___ feet

d) Method of sealing at reductions None

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material ___ method ___ from ___ feet to ___ feet
material ___ method ___ from ___ feet to ___ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ___ feet to ___ feet
material ___ from ___ feet to ___ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 150 feet to 200 feet
type ___ from ___ feet to ___ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

17. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ___

COMPLETION REPORT TM-S

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

MONITOR/PIEZOMETER WELL

FILING FEE $10.00

DEPARTMENT OF WATER RESOURCES (DWR)
NOTICE OF INTENTION TO DRILL
MONITOR/PIEZOMETER WELL

MONITOR/PIEZOMETER WELL

TM-3

Section 45-596, Arizona Revised Statutes and Rule R12-15-817 provide: Prior to drilling a monitor or piezometer well, the well owner or lessee shall file a Notice of Intention to Drill on a form provided by the Department.

WELL/LAND LOCATION

1. Township 23 N/S
   Range 24 E/W
   Section 35
   List 10-acre subdivision
   NE ¼, NW ¼, NW ¼

2. County Cochise

3. Applicant:
   Phelps Dodge Corp.
   Name
   Copper Queen Branch
   Address
   Bisbee, AZ 85603
   City State Zip

4. Lance Pape
   NAME OF CONTACT PERSON
   Phone: 602-432-5342
   Agency: Phelps Dodge Corp.

5. Owner of well:
   Phelps Dodge Corp.
   Name
   Copper Queen Branch
   Address
   Bisbee, AZ 85603
   City State Zip

   Purpose of well drilled pursuant to this Notice:
   Monitor X
   Piezometer

7. Owner of land:
   Phelps Dodge Corp.
   Name
   Copper Queen Branch
   Address
   Bisbee, AZ 85603
   City State Zip
   602-432-5342
   Telephone number

8. Construction will start:
   October 1988
   Month Day Year

9. Period well will remain in use: indef. months/years

GENERAL INSTRUCTIONS

ll out this form in duplicate and mail to Department of Water Resources, Suite 1000, 99 East rginia, Phoenix, Arizona 85004. Filing fee must accompany Notice.

state that this Notice is filed in compliance with Rule R12-15-809 and is complete and rrect to the best of my knowledge and belief and that I understand the conditions set forth the reverse side of this form.

RECEIVED OCT 5 1988 WATER RESOURCES HYDROLOGY DIV.

OCT 1988 HYDROLOGY APPROVED

TE 10/4/88

Donald A. Stallwell
Signature of Applicant

13. Is this well to monitor existing contamination? Yes Potential contamination? ___
Please explain SO_4 and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? R. Kennett, J. DuBois
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? N/A

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:

14	inches from	0	feet to	20	feet
10	inches from	20	feet to	250	feet
6	inches from	250	feet to	300	feet

c) Casing materials (PVC, steel, stainless steel, etc.):

material Steel	diameter	10	inches from	0	feet to	20	feet
material Steel	diameter	6	inches from	0	feet to	250	feet
material PVC	diameter	4	inches from	0	feet to	300	feet

d) Method of sealing at reductions Welded steel ring

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)

material Grout	method Poured	from	0	feet to	20 feet
material Grout	method Circulated	from	0	feet to	250 feet
material	method	from		feet to	feet

f) Gravel packs (state material, and whether natural or artificial):

material None	from		feet to	feet
material	from		feet to	feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):

type Factory slotted PVC	from	250	feet to	300 feet
type	from		feet to	feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

16. Include detailed construction diagram, if available.

Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ___

COMPLETION REPORT

1. Per A.R.S. §45-600, the Completion Report to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24S	24E	4	SW NE NE
Township	Range	Section	¼ ¼ ¼

EQUIPMENT INSTALLED:

Kind of pump Submersible
(Turbine, centrifugal, etc.)

Kind of power Electric (Electric, natural gas, gasoline, etc.) H.P. Rating of Motor 3 HP

Pumping Capacity _____ (Gallons per minute) Date installed _____

WELL TEST:

Test pumping capacity 7.5 GPM (Gallons per minute) Date Well Tested 2/18/89

Method of Discharge Measurement timed volume
(Weir, orifice, current meter, etc.)

Static Groundwater Level 319.2 ft. Drawdown 583.8 ft.

Total Pumping Lift 903 ft. Drawdown _____ lbs (Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

GENERAL INSTRUCTIONS

l out this form in duplicate and mail to Department of Water Resources, Suite 1004, 99 East ginia, Phoenix, Arizona 85004. Filing fee must accompany Notice.

tate that this Notice is filed in compliance with Rule R12-15-809 and is complete and rect to the best of my knowledge and belief and that I understand the conditions set forth the reverse side of this form.

E 10/4/88 Donald A. Stallwell

RECEIVED OCT 5 1988 WATER RESOURCES

OCT 1988 HYDROLOGY APPROVED

13. Is this well to monitor existing contamination? Yes Potential contamination? ____
Please explain Sulfate and TDS in Bisbee-Naco area

14. If construction plans have been coordinated with Az. Dept. Health Services, Environmental Health Division, who is the agency contact? N/A
If construction plans have been coordinated with Az. Dept. Water Resources, Hydrology/ Remedial Action Division, who is the division contact? N/A

15. WELL CONSTRUCTION PLAN

a) Drilling method (mud rotary, hollow-stem auger, etc.) Air rotary

b) Borehole diameters:
14 inches from 0 feet to 20 feet
10 inches from 20 feet to 225 feet
6 inches from 225 feet to 275 feet

c) Casing materials (PVC, steel, stainless steel, etc.):
material Steel diameter 10 inches from 0 feet to 20 feet
material Steel diameter 6 inches from 0 feet to 225 feet
material PVC diameter 4 inches from 0 feet to 275 feet

d) Method of sealing at reductions Welded steel ring

e) Annular seal materials (cement, grout, etc.) and method of placement(tremied,circulated:)
material Grout method Poured from 0 feet to 20 feet
material Grout method Circulated from 0 feet to 225 feet
material ____ method ____ from ____ feet to ____ feet

f) Gravel packs (state material, and whether natural or artificial):
material None from ____ feet to ____ feet
material ____ from ____ feet to ____ feet

g) Perforations (if pre-manufactured, please give specs of perforations or screens):
type Factory slotted PVC from 225 feet to 275 feet
type ____ from ____ feet to ____ feet

h) Method of well development (bail, air lift, surge) Air lift

i) Will surface or conductor casing extending above grade be used to protect the aquifer from additional surface contaminants during drilling and construction? Yes

6. Include detailed construction diagram, if available.

. Is the proposed wellsite within 100 feet of a septic tank system, sewage disposal area, landfill, hazardous waste facility or storage area of hazardous materials? Yes__ No X
If yes, a request for a variance must accompany this application pursuant to R12-15-820.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with DWR rules R12-15-811 and R12-15-816.
II. Drilling of the well shall be completed within one (1) year after the date of Notice.
III. A Well Driller Report, DWR-55-6-5/83, is required within 30 days of completion of drilling. A Completion Report, DWR-55-7-3/83, is required to be filed with the Department within 10 days after installation of pump equipment for monitor wells.
IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited to the minimum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual amount of 10 acre feet total.
V. Special construction standards required pursuant to R12-15-821: ____

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-600, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.

2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.

3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.

4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

CONDITIONS

17. If construction plans have been coordinated with Arizona Department of Environmental Quality, who is the agency contact? *N/A*

If construction plans have been coordinated with Arizona Department of Water Resources, who is the agency contact? *N/A*

18. **WELL CONSTRUCTION PLAN:**

a) Drilling method (mud rotary, hollow-stem auger, etc.) *Air Rotary*

b) Borehole diameters: *14.75* inches from *0* feet to *20* feet.
7.875 inches rom *20* feet to *1030* feet.

c) Casing materials (PVC), steel, hollow-stem auger, etc.)

material *Low Carbon Steel* diameter *10* inches from *0* feet to *20* fe
material *Fiberglass* diameter *4* inches from *0* feet to *1030* fe

d) Method of sealing at reductions *N/A*

e) Annular seal materials (cement, grout, etc.,); method of placement (tremied, circulated):

material *Cement Grout* method *Tremie* from *0* feet to *20* fe
material *Bentonite Seal* method *Tremie* from *20* feet to *925* fe

f) Filter packs (state material):

material *8 - 12 Mesh Silica Sand* from *925* feet to *1030* fe
material from feet to fe

g) Perforations or screen specifications:

Type *4-inch fiberglass wire wrap, 0.040-inch slots* from *930* feet to *1010* fe
Type from feet to fe

h) Method of well development (bail, air lift, surge) *Air Lift, Surge*

i) Will surface or conductor casing extend above grade? Yes *X* No

19. Include detailed construction diagram showing expected water depth in feet below land surface, and details of vault, if specified.

CONDITIONS

I. Construction and abandonment standards for all wells shall be in accordance with A.A.C. R12-15-811 and R12-15-816.

II. Drilling of the well shall be completed within one year after the date of Notice.

III. A Well Driller Report is required within thirty days of completion of drilling. A Completion Report is required to be filed with th Department within thirty days after installation of pump equipment for monitor wells.

IV. Pump equipment may not be installed on a well drilled for piezometer purposes. If a monitor well is pumped, pumping is limited the maximum amount required for monitor purposes, but in no case may exceed 35 gallons per minute and an annual volume of 1 acre feet total.

V. A.A.C. Rule R12-15-811.H.2, requires that: "A monitor well shall be identified as such on the vault cover or at the top of the steel casin Identification information will include well registration number."

VI. Special construction standards required pursuant to A.A.C. Rule R12-15-821:

RE: Registration No. 55-564726 THRU 55-564730
File No. VARIOUS

Dear Well Owner:

Enclosed for your records is an annotated copy of the Notice of Intention to Drill a well. This is returned to you as evidence of compliance with A.R.S. §45-596. A drilling card has been mailed to your designated driller. Prior to drilling he must have it in his possession.

Since this well is being drilled as a Monitor well, or for Cathodic Protection, Grounding, Geotechnical or Piezometer purposes, our standard driller report form is also being furnished to the driller. He is required to complete it and return it to the Department within 30 days after the completion of the well. A Completion Report form is being furnished for monitor wells where pump installation is authorized. This must be completed within thirty days of installation as required by A.R.S. §45-600.

A Change of Well Information form is enclosed for your future use . If you deem it necessary to change the location of the proposed well, please notify the Department on the enclosed form. A properly amended Drilling Card will then be issued and must be in possession of the driller before drilling begins. During the drilling of a new well, if it is determined that it must be abandoned, then a Well Abandonment Completion Report must be submitted per R12-15-816.F.

Per A.R.S. §45-593, the person to whom a well is registered shall notify this Department of a change of ownership of the well and/or information pertaining to the physical characteristics of the well, in order to keep the well registration file current and accurate.

Sincerely,

Sylvia Valdez

COMPLETION REPORT
(Pump Installation Report)

1. Per A.R.S. § 45-6000, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operations. For a flowing well the shut-in pressure should be measured in feet above the land surface or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well be measuring the natural flow at the land surface.

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Pursuant to Section §45-596, Arizona Revised Statutes, provides: a person may not drill, deepen, or modify any well, without first filing a Notice of Intention to Drill with the Department.

2. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in §45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.

   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.

   c. Shall demonstrate to the Director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.

   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

3. Endorsement by the county/local authority is based on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

4. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in section §45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

5. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

6. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

7. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§45-596.E.).

8. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

9. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

10. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

KNOW ALL MEN BY THESE PRESENTS: THAT

ROSEMEAD PROPERTIES, INC., a Nevada corporation

for the consideration of TEN AND NO/100 DOLLARS, and other valuable considerations, the GRANTOR herein does hereby convey to

TURQUOISE VALLEY, INC., an Arizona Corporation

the GRANTEE.

the following described real property situate in Cochise County, Arizona:

PARCEL I:
The Southeast quarter of the Northwest quarter; and the Southwest quarter of the Northeast quarter of Section 18, Township 24 South, Range 24 East of the Gila and Salt River Base and Meridian, Cochise County, Arizona.
PARCEL II:
An easement for ingress and egress to the real property described in Parcel I above, described as follows: The East 20.00 feet of the Northwest quarter of the Northeast quarter of Section 18, Township 24 South, Range 24 East of the Gila and Salt River Base and Meridian, Cochise County, Arizona. Grantee covenants and agrees, upon request by Grantor, to quitclaim this easement to Grantor, Rosemead Properties, Inc., provided Grantor grants to Grantee an alternative easement without additional cost to Grantee.

The real property described herein shall be used exclusively as a golf course and no improvements of any kind shall be constructed or maintained thereon except such improvements as may be directly and solely used for golf course purposes. Grantee further agrees that should the real property be used other than exclusively for golf course purposes or if improvements of any kind other than directly and solely for golf course purposes are constructed or maintained thereon, title to the real property shall, at Grantor's option, revert to Grantor or its successors, assigns, or transferees.

Grantor and Grantee agree that the foregoing covenants, restrictions, and reversion shall be covenants running with the land and shall be binding on Grantee and its successors, assigns, or transferees with respect to the real property or any part thereof, and such covenants shall inure to the benefit of and shall be enforceable by Grantor and its successors, assigns, or transferees.

SUBJECT TO: Existing taxes, assessments, liens, encumbrances, covenants, conditions, restrictions, rights of way and easements of record.

And the GRANTOR does warrant the title against all persons whomsoever, subject to the matters above set forth.

IN WITNESS WHEREOF, the GRANTOR has caused its corporate name to be signed by the undersigned officers.

Registration No. 55-568875
File No.D(24-24) 18 ACA

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Kay McNeely

Dear Applicant:

Enclosed is a copy of the Notice of Intent (NOI) to Abandon a Well. This NOI, which was recently filed with this Department is being returned to you as evidence of your compliance with ARS §45-594; R12-15-816. The enclosed Well Owners Notification of Abandonment is to be submitted when the well has been properly abandoned. The Well Abandonment Card and Abandonment Completion Report forms have been sent to your driller. He may not begin abandonment until he has received the Well Abandonment Card. If you change drillers, you must supply this Department with the new driller's identity. Well abandonments shall be performed only by a licensed well drilling contractor or single well licensee.

ARS §45-594; R12-15-816(K) requires the registered well owner to submit a Well Owners Notification of Abandonment form within thirty (30) days after the abandonment of the well. It also requires the driller to furnish this Department a complete and accurate Well Abandonment Report within thirty (30) days after completion of abandonment. You should insist, and ensure, that both of these are done.

Sincerely,

Kay McNeely

GENERAL INSTRUCTIONS FOR FILING NOTICE WITH ADWR

1. Section §45-596(D) provides that the Director shall determine that all information required on this form has been submitted. If not, the person filing will be notified, and the drilling, deepening or modification of the well may not proceed.
2. Section §45-596(d) provides that the Department has 15 days after the receipt of a complete and correct notice of intention to record the notice and mail duplicate to owner. Drill card will be mailed directly to drilling firm as stated in item #14.
3. Please mail two original notices with original signatures, a site plan in DUPLICATE, and a check or money order (no cash) in the amount of $10.00 to P.O. Box 458, Phoenix, Arizona 85001-0458 or hand deliver to 500 North Third Street, Phoenix, Arizona 85004-3903. USE BLACK OR BLUE INK.
4. If the well is a replacement, deepening or modification of an existing well, provide the registration number of the existing well in item 2.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.

MAR. 6/98. — Date

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Pursuant to Section §45-596, Arizona Revised Statutes, provides: a person may not drill, deepen, or modify any well, without first filing a Notice of Intention to Drill with the Department.

2. If any water from a proposed well on a parcel of land of twenty or fewer acres will be used for domestic purposes, as defined in §45-454, the applicant shall submit a site plan to scale of the property with the county assessor's parcel identification number. The site plan:

   a. Will be on a 8½"x11" piece of plain paper with representation of the locations of all structures, septic tank or sewer systems and proximity of adjacent lot lines to scale.

   b. Must show the proposed well location and the location of any septic or sewer system that is either located on the property or within one hundred feet of the proposed well site.

   c. Shall demonstrate to the Director's satisfaction that the well will not be drilled within one hundred feet of any septic or sewer system.

   d. Must be approved by the county health authority, or by a local health authority in areas where the county health authority has delegated authority to approve septic or sewer systems. Before approval, the health authority shall review the plan and determine whether the proposed well location complies with applicable state and local laws regarding the placement of wells. If so, the health authority shall endorse the site plan and the proposed well placement.

3. Endorsement by the county/local authority is based on the best available judgement that this well, as shown on the site plan submitted, is 100 feet or more from all known and visually identifiable sewage treatment systems. It is not a representation that a well placed at this site will be guaranteed as to quantity or quality. Information brought to light at a future date may render this determination invalid.

4. If a well which was originally drilled as an exploration well, a monitor well, a piezometer well or for any use other than domestic use and is later proposed to be converted to use for domestic purposes, as defined in section §45-454, the well owner shall file a notice of intention to drill and comply with the requirements prescribed pursuant to this section before the well is converted and any water from that well used for domestic purposes.

5. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

6. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an Irrigation Non-Expansion Area or Active Management Area to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

7. The drilling, deepening, or modification of this well shall be completed within one (1) year of the date of the notice (§45-596.E.).

8. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this notice.

9. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

10. If an individual other than the land owner or lessee signs this Notice, an original letter of authorization from the land owner/lessee, stating that the individual has permission to sign this specific Notice on their behalf, shall accompany the Notice.

Registration No. 55-567713
File No.D(24-24) 18 BCC

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Sylvia Valdez

RE: Well Registration 55-556161
File No. D (24-24) 18 BCD

We are in receipt of the Completion Report (not completed) from you for the above well (copy enclosed). I am enclosing a "Change of Well Ownership" form for your use, as you will note that the WELL OWNER OF RECORD IS "TURQUOISE VALLEY INC". Please note that the "Change of Ownership" requires a $10.00 fee accompanying the completed form.

PLEASE submit the completed "Change of Ownership" form with the appropriate fee. If the well has not and will not be drilled, please return the "Completion Report" (form enclosed) indicating such on the form. If the well will be drilled, please submit the "Completion Report" (form enclosed) when done. We have not received a "Well Driller Log" from L-B Drilling (driller of record per the Notice of Intent to Drill dated 7-25-96 (8-21-96).

If you have any questions, please feel free to contact me.

Dear Well Owner:

The Department of Water Resources issued drilling authority one year ago for the well referenced by the file and registration number as indicated on the above label. To date, our records show that this well has not been drilled.

The registered well owner must submit a **Completion Report** which specifies the data relating to the pump equipment, within thirty (30) days of installation. There is no time limit by which you must install any pump equipment, but the **Completion Report** (form enclosed) must be submitted within thirty (30) days of installation.

If your well has been drilled, your file needs the above mentioned report to bring the well into compliance with the law, and you should ensure that this is done.

If you have not drilled your well, but it is your intention to do so in the future, this is to advise you that you must refile a **Notice of Intent to Drill** in order to obtain authority to commence drilling.

Your immediate assistance is appreciated. If you have any questions, or need further information, please contact Records Management Section at (602) 417-2405.

Dear Applicant:

We are recently in receipt of your filing an (NOI) to drill/deepen/replace/modify a well. However, our review indicates that the filing(s) is incomplete under the Groundwater Management Act for the following reason(s):

> Item #12 is to be completed as requested. Your site plan should include the location of the well and the distance from the well to the septic system.

Upon clarification, or correction, no further action can be taken by this Department pending receipt of information that completes the application, as indicated above.

Sincerely,

Toni Bergeman

Registration No. 55-556161
File No. D(24-24)18 BCD

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen/modify a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Toni M. Bergeman

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

COMPLETION REPORT

1. Per **A.R.S. § 45-600**, the Completion Report is to be filed with the Department within 30 days after installation of pump equipment by the registered well owner.
2. Drawdown of the water level for a non-flowing well should be measured in feet after not less than 4 hours of continuous operation and while still in operation and for a flowing well the shut-in pressure should be measured in feet above the land or in pounds per square inch at the land surface.
3. The static groundwater level should be measured in feet from the land surface immediately prior to the well capacity test.
4. The tested pumping capacity of the well in gallons per minute for a non-flowing well should be determined by measuring the discharge of the pump after continuous operation for at least 4 hours and for a flowing well by measuring the natural flow at the land surface.

LOCATION OF THE WELL:

24 N/S	24 E/W	5	SW 1/4	SW 1/4	SW 1/4
Township	Range	Section	10-acre	40-acre	160-acre

EQUIPMENT INSTALLED:

Kind of pump: Submersible
Turbine, centrifugal, etc.

Kind of power: Electric — H.P. Rating of Motor: 3 Hp.
Electric, natural gas, gasoline, etc.

Pumping Capacity: 20 Gallons per minute — Date pump installed: 7-8-94

WELL TEST:

Test pumping capacity: 24 Gallons per minute — Date Well Tested: 7-8-94

Method of Discharge Measurement: Orifice
Weir, orifice, current meter, etc.

Static Groundwater Level: 225' ft. Drawdown: 15' ft.

Total Pumping Lift: ft. Drawdown: lbs.
(Flowing Well)

I HEREBY CERTIFY that the above statements are true to the best of my knowledge and belief.

GENERAL INSTRUCTIONS

1. Fill out this form in DUPLICATE and send WITH $10.00 FEE to 15 South 15th Avenue, Phoenix, AZ 85007.
2. For specific instructions, limitations and conditions, see the reverse side of this form.
3. This form is to be used to drill, deepen, replace or modify a well outside of an Active Management Area.
4. If the well is a replacement, deepening or modification of an existing well, provide the registation number of the existing well in Item 8.
5. Construction standards for wells, including abandonment, shall be in accordance with Department Rules.
6. Section §45-596(D), provides that the Director shall determine that all information required on form has been submitted. If not, the person filing will be notified, and the drilling, deepening, or modification of the well may not proceed.

I state that this Notice is filed in compliance with A.R.S. §45-596 and is complete and correct to the best of my knowledge and belief and that I understand the limitations under which I must operate this well as set forth on the reverse side of this form.

DWR-55-40 9/92 (Rev.)

SPECIFIC INSTRUCTIONS, LIMITATIONS AND CONDITIONS

1. Receipt of this annotated Notice constitutes authorization to proceed in drilling, deepening, or modifying the well as set forth on this Notice.

2. Only a well driller licensed in the State of Arizona is authorized to drill, deepen or modify a well. A well driller may commence drilling a well only if the well drilling contractor or licensee has possession of a drilling card at the well site, issued by the Director in the name of the well drilling contractor or licensee, authorizing the drilling of the specific well in the specific location.

3. An exempt well means a well having a pump with a maximum capacity of not more than thirty-five (35) gallons per minute and may include the application of water to less than two (2) acres of land in an INA or AMA to produce plants or parts of plants for sale, human consumption or for use as feed for livestock, range livestock or poultry.

4. A non-exempt well is any well which exceeds the limitations, as indicated in paragraph 3 above. However, water from a non-exempt well located in an Irrigation Non-Expansion Area, may not be withdrawn to irrigate any acres which are not eligible to be irrigated pursuant to A.R.S. §45-434 or §45-437. Also, owners of non-exempt wells located in Irrigation Non-Expansion Areas, are subject to the measuring device and annual report requirements of A.R.S. §45-437.

5. Multiple Drinking Water Connections mean other parcels of land being served by your well that are not owned by you. Each separate parcel is considered one connection.

6. The drilling, deepening, or modification of this well shall be completed within one (1) year of the issuance of the drilling authority.

7. Within thirty (30) days after the installation of pumping equipment on this well, the registered well owner shall file the prescribed Completion Report. A form for this purpose will be furnished to the registered owner with the return of an annotated copy of this Notice.

8. The person to whom a well is registered shall notify the Department of a change in ownership or a change in data relating to this well. The prescribed form for these purposes will be furnished to the registered owner with the return of an annotated copy of this Notice.

9. A sketch map showing the general boundaries of the Active Management Areas and Irrigation Non-Expansion Areas is shown at the right. Maps of greater detail are available on request.

10. If the proposed well is a non-exempt well and is located near the Colorado River and if the proposed well may pump Colorado River Water, proof must be submitted with this notice that the applicant has the legal right to use Colorado River Water. Alternately, evidence needs to be submitted that supports the contention that Colorado River water will not be withdrawn by the well. Persons near the Colorado River may wish to contact the Colorado River Management Division, Department of Water Resources at (602) 542-1960 to determine those Townships and Ranges which will be affected by these requirements or with questions regarding the proof of right.

Registration No. 55-544535
File No. D(24-24)5CCC

Dear Applicant:

Enclosed is a copy of the Notice of Intention (NOI) to drill/deepen or replace a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Completion Report is to be submitted when pump equipment is installed. The Drilling Card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the Drilling Card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended Drilling Card must be in the possession of the driller before drilling commences at a different location than originally authorized. **In no case may the replacement well be more than 660 feet from the well it is replacing.**

ARS §45-600 requires the registered well owner to submit a completion report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate log of the well within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed

a Change of Well Information Form should it be needed in the future.

If, in the future, it is determined that water from your well is supplied from the Colorado River and you do not have a perfected water right to Colorado River water established prior to 1929, the U.S. Bureau of Reclamation may require you to cease pumping or enter into a contract for use of Colorado River water.

Sincerely,

Ellen Kane

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well. This NOI, which was recently filed with this Department, is being returned to you as evidence of your compliance with ARS §45-596. The enclosed Pump Installation Completion Report is to be submitted when pump equipment is installed. The drilling card and Well Drilling Report form have been sent to your driller. He may not begin drilling until he has received the drilling card and it must be displayed on the rig during drilling. If you change drillers, you must supply this Department with the new driller's identity. Please ensure that the driller you select is licensed to drill the type of well you require. All well drillers must pass an examination proving they understand the drilling methods for that particular license, and are familiar with the laws and regulations which govern well construction in Arizona.

If it is necessary to change the location of the proposed well, immediately contact the Department of Water Resources to obtain written permission before proceeding with the drilling. A properly signed, amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS §45-600 requires the registered well owner to submit a Pump Installation Completion Report within thirty (30) days after the installation of pumping equipment. It also requires the driller to furnish this Department a complete and accurate Well Drillers Report and Well Log within thirty (30) days after completion of drilling. You should insist, and ensure, that both of these are done.

If in the course of drilling a new well, it is determined that the new well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the new well must be properly abandoned and a Well Abandonment Completion Report submitted per R12-15-816.F.

Per ARS §45-593 (C), the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. We have enclosed a Change of Well Information Form should it be needed in the future.

Sincerely,

Craig Bell

WATER DIVISION

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Notice of Intent to Drill, Deepen, Replace or Modify a Well

(except a Non-Exempt Well in an Active Management Area)

$150 or $50 FEE

- Review instructions prior to completing form in black or blue ink.
- You must include with your Notice:
- Check or money order in the amount of the appropriate filing fee. For a well located within an AMA or INA, the fee is $150.00. For a well not located within an AMA or INA, the fee is $50.00 if the well will be used solely for domestic purposes (see page 2 and instructions) and will have a pump with a maximum capacity of not more than 35 gallons per minute. Otherwise, the fee is $150.00.
- Authority for fee: A.R.S. § 45-596.

INSTRUCTIONS FOR COMPLETING REGISTRATION FORM

General Instructions

1. A person who owns an "Existing Well" shall register the well, pursuant to A.R.S. 45-593, by filing this form **in duplicate** with the Department of Water Resources not later than midnight June 14, 1982. The form must be completed and signed. Failure to do so will constitute a violation of A.R.S. 45-593, and may subject the well owner to injunction and/or civil penalties, pursuant to A.R.S. Title 45, Article 12.

2. An "Existing Well" means, (1) a well which was drilled on or before June 12, 1980 and which is not abandoned or sealed, or (2) a well which was not completed on or before June 12, 1980, but for which a Notice of Intention to Drill was on file with the Arizona Water Commission on or before June 12, 1980.

3. No registration fee is required for Exempt Wells. A $10.00 registration fee must accompany registration forms for all Non-Exempt Wells.

4. An "Exempt Well" means a well having a pump with a maximum capacity of not more than 35 gallons per minute which is used to withdraw groundwater. An Exempt Well may include the non-commercial irrigation of not more than 1 acre of land.

5. A "Non-Exempt Well" means a well that is not an "Exempt Well".

INSTRUCTIONS FOR REGISTRATION QUESTIONS

1. The Registrant must be the owner of the well and may be an individual, public or private corporation, company, partnership, firm, association, society, estate, trust, any other private organization or enterprise, the United States, any state, territory or country or a governmental entity, political subdivision or municipal corporation organized under or subject to the constitution and laws of this State.

2. If you own an existing irrigation well drilled at any time, or any other type of well drilled on or after June 20, 1968, you should have an assigned control and/or file number. Write these numbers in item 2. If you do not know the number, please explain the reason on the form or on an attached sheet.

3. a. Fill in the Section, Township and Range in all cases if it is available.
   b. If the well is in a subdivision and you have this information, give the subdivision name, Lot Number, and Address.

4. Show all purposes for which the water is used.

5. If the well is used for irrigation, give the number of acres irrigated in 1980 from the well.

6. If the owner of the land is an individual, give the last name, first name, middle initial. If the owner of the land is a corporation, partnership, firm, etc., fill in the appropriate title.

7. Complete the section on Well Data with the most accurate information available to you. If the data is not available, write N/A in the blanks.

8. Give the legal description of the place of use of the water. If place of use is in a subdivision and legal description is not available, give the subdivision name, Lot Number and/or address on the blank line.

9. The person in whose name a well is registered shall notify the Department of any change in ownership and shall keep all information on the registration record current and accurate. A form entitled "Change of Well Information/Ownership" is available for this purpose. A blank form will be furnished with the returned duplicate copy of the registration form.

0	20'	6 5/8"	X*										Cement
20	160	6 5/8"		X									
160	200	6 5/8"		X									

* ADWR well construction standards require a surface seal consisting of a minimum of 20 feet of steel casing. Cement grout must be used to fill the annular space between the surface casing and the borehole. (A.A.C. R12-15-811(B))

The Department's issuance of an authorization to drill a well is not a determination of whether water withdrawn from the well is legally surface water or groundwater. The legal nature of the water withdrawn from the well may be the subject of court action in the future as part of a determination of surface water rights in your area. If there are court proceedings that could affect your well, you will be notified and be given the opportunity to participate. If you have questions regarding the legal nature of the water to be withdrawn from your proposed well, please consult with an experienced civil engineer, hydrologist or water rights attorney.

For the purposes of determining appropriate fees outside AMAs or INAs, "domestic purposes" is defined as "uses related to the supply, service and activities of households and private residences and includes the application of water to less than 2 acres of land to produce plants or parts of plants for sale or human consumption, or for use as feed for livestock, range livestock or poultry, as such terms are defined in A.R.S. § 3-1201."

I state that this notice is filed in compliance with A.R.S. § 45-596 and is complete and correct to the best of my knowledge and belief.

Re: NOI to Drill 55-205126

Dear Applicant:

Enclosed please find a refund check in the amount of seventy-five dollars ($75.00). The Department is refunding a portion of the NOI filing fees because of overpayment on your part. The appropriate filing fee for a well not located within an AMA or INA, is $75 if the well will be used solely for domestic purposes and will have a pump with a maximum capacity of not more than 35 gallons per minute.

If you have any questions about the refund, please contact Jeannie Aguilar of the Water Management Support Section at 602-417-2470.

Sincerely,

Jeannie Aguilar

Registration No. 55- 205126
File No. D(24-24) 18 CBB

Dear Well Owner:

Enclosed is a copy of the Notice of Intention (NOI) to Drill a well that you recently filed with this Department pursuant to A.R.S. § 45-596. This is to inform you that the Department has approved the NOI and has mailed or otherwise provided a drilling card authorizing the drilling of the well to the well driller identified in the NOI. The driller may not begin drilling until he has received the drilling card, which must be displayed on the drill rig during drilling.

Well drilling activities must be completed within one year after the date the NOI was filed with the Department. If drilling is not completed within one year, you must file a new NOI before proceeding with further drilling. If in the course of drilling the well, it is determined that the well cannot be successfully completed as initially intended (dry hole, cave in, lost tools, etc.), the well must be properly abandoned and a Well Abandonment Completion Report must be filed as required by A.A.C. R12-15-816(F).

If you change drillers, you must notify the Department of the new driller's identity. Please ensure that the new driller is licensed by the Department to drill the type of well you require. A new driller may not begin drilling until he receives a new drilling card from the Department. If you are drilling a new or replacement well and it is necessary to change the location of the proposed well, you may not proceed with drilling until you file an amended NOI with the Department and the Department issues an amended drilling card to the driller. If county approval was required for the original well site plan (this applies to domestic wells on parcels that are five acres or less), you must submit a new well site plan with the new well location to your local county health authority for approval prior to filing the amended NOI with the Department.

A.R.S. § 45-600 requires the registered well owner to complete and file a Pump Installation Completion Report form (DWR form 55-56) within 30 days after the installation of pumping equipment. A form is enclosed for your use. Also enclosed is a well owner's guide that provides useful information and advice concerning your upcoming well construction project. A.R.S.§ 45-600 also requires the driller to file a complete and accurate Well Drillers Report and Well Log (DWR form 55-55) within 30 days after completion of drilling. That form was mailed to your driller with the drilling card. You should insist and ensure that all of the required forms are accurately completed and timely filed with the Department.

Please be advised that A.R.S. § 45-593(C) requires the person to whom a well is registered to notify the Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep this well registration file current and accurate. Any change in well information or a request to change well driller must be filed on a Request to Change Well Information form (DWR form 55-71A) that may be downloaded from the ADWR Internet website at <http://www.water.az.gov/adwr/content/forms/default.htm#NOI>.

Sincerely,

Jeannie Aguilar

TVI 236	55-802236	4562	12/15/99	110.2	4452

Notes:

ft = feet

amsl = above mean sea level

[1] *Water level data have been compiled from a variety of sources and are reported in the format received (e.g., as depth to water, water elevation, or both; with or without a measuring point elevation). The measuring point, depth to water, and groundwater elevations have not been modified from the original reports to account for the differing measuring point elevations used overtime at certain wells.*

Notes:

All results reported in milligrams per liter (mg/L), except pH which is reported in Standard Units

ADWR = Arizona Department of Water Resources

mg/L = milligrams per liter

Notes:

[1] Well name in parenthesis are those used in SET (1998c)

[2] The pumping rates listed represent maximum pumping rates. Information obtained from ADWR Image Records for wells in the United States. Data for Mexico wells from personal communication with well operators.

[3] from HGC (2008c)

[4] Location, installation year, and pumping rate are approximate

gpm = gallons per minute
ft bgs = feet below ground surface
ft amsl = feet above mean seal level
NA = not applicable
NR = no record
EN = Ejido Naco
UN = Urbano Naco

TABLE H.2
Arizona Water Company Annual Production Totals

Year	Total Production[1] (Mgal)	Average Production Rate (gpm)
1998	359.4302	684
1999	363.9655	692
2000	394.7041	749
2001	370.3547	705
2002	398.1624	758
2003	391.8667	746
2004	385.4388	731
2005	377.2140	718
2006	368.2015	701
2007	356.5457	678

Notes:

[1] from AWC (2008)

Mgal = Mega-gallons (10^6 gallons)

gpm = gallons per minute

Total	**26.962**	**5.405**	**0.557**
Average Annual Rate (gpm)	**51**	**10**	**1.06**

Notes:

[1] from ACC (2007)

[2] Individual totals for NWC-02 and NWC-06 not reported

Mgal = Mega-gallons (10^6 gallons)

gpm = gallons per minute

TABLE H.5
Pumping Information for Naco-Sonora Wells

City of Naco-Sonora[1]		
Well	**Average Rate (gpm)**	**Notes**
UN-01	0	Abandoned; Pumping rate reported as 127 gpm in 1997[2]
UN-02	412	More than 15 years old
UN-03	143	More than 15 years old; only pumps between April and October. Pumping rate reported as 127 gpm in 1997[2]
UN-04	190	Installed between 1996 and 1998
UN-05	285	installed ~2005; greater than 100m deep and deepest well
Total[3]	**1,030**	
Ejido Naco (El Oasis) Irrigation[4]		
Well	**Average Rate (gpm)**	**Notes**
EN-01	0	Well not in Service
EN-02	873	
EN-03	1587	
EN-05	873	
EN-06	ND	

Notes:

[1] from HGC (2008a) - personnel Communication with Naco-Sonora Public Works operator

[2] from SAIC (1997)

[3] Total disagrees with operator's estimate of a total pumping rate of 635 gpm

[4] from HGC (2008b) -personnel Communication with Ejido Naco representative

gpm = gallons per minute

ND = no data

GEOLOGIC LOGS FOR MONITORING WELLS INSTALLED IN 2008

HYDRO GEO CHEM, INC.

Geologic Boring Log

		Boring No.:	**BMO-2008-1G**
Project Name:	**Bisbee Mitigation Order**		Project No.: 872000
Drilling Company:	WDC Exploration and Wells, Inc.	Driller:	Billy Berg
Site Plan at Boring Location:		ADWR Registration No.:	**55-909474**
		Drilling Equipment:	GEFCO-Speedstar 50K
		Drilling Method:	Stratex; tricone
		Bit Type/Size:	12"; 8.5"
		Total Borehole Depth:	320 ft bls
		Casing Depth:	310 ft bls
		Screened Interval:	180-300 ft bls
		Screen slot size:	0.125", vertical slots
		Filter pack type:	#8 Tacna gravel
		Top of Casing Elevation:	4805.10
		Land surface Elevation:	4804.60 (pad)
		Date/Time Started:	7/29/08 10:08
		Date/Time Completed:	7/31/08 12:59
Township, Range, Section: T 24 S, R 24 E Sec. 2 CAA		Logged by:	K. Wilson
UTM: 3471723.644 N, 606467.681 E, NAD 83		Checked by:	R. Zimmerman

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
10	Basin Fill	15	55	30	SC	2.5YR 5/4	S	Reddish brown clayey sand with gravel, well cemented with caliche. Gravel fraction includes clasts of gray phyllite, quartz, brown fine-grained sandstone, gray limestone, silicified limestone, and caliche chunks; most clasts angular to subangular. Sand-sized particles include caliche chips, angular to subrounded quartz, and lithic grains.
20		30	40	30	SC	2.5YR 6/3	S	Light reddish brown clayey sand with gravel, well-cemented with caliche. Gravel clasts include phyllite, quartz, brown sandstone, green quartzite and siltstone, and gray limestone; clasts are mostly angular to subangular. Gravel-sized caliche chunks are also present in the sample. Sand is fine to coarse-grained. Clay occurs as balls and as a component of the caliche cement.
30		60	25	15	GM	2.5YR 6/2 - 2.5YR 7/2	S	Pale red silty gravel with sand. Gravel clasts and sand-sized lithic grains are primarily brown, gray, white, and green fine-grained quartz sandstones, with lesser amounts of phyllite, quartz, and limestone. Caliche cement.
40		65	30	5	GP	2.5YR 5/3	M	Reddish brown gravel with sand. Silty sandstone fragments and caliche chips. Material appears to be caliche-cemented sandstone rubble.
50	Morita Formation				bedrock	2.5YR 4/6	S	Red calcareous mudstone. Rock is composed of lithified mixture of clay, silt, and small amounts of fine-grained sand. Top of bedrock; Morita Formation.
60						10R 6/1-6/2	S	Reddish gray to pale red calcareous clayey siltstone. Few small (< 1 mm) white bleached spots; fissile, moderately laminated; Morita Formation. Note: Water level rose to 61 ft bls 24 hours, after intercepting first formation water (other than dampness) during drilling at 210 ft bls.
70						10R 5/3	N	Weak red sandy siltstone with few pebbly layers. Pebbles are primarily phyllite derived from the Pinal Schist. Lower portion of the Morita Formation. Damp.
80						2.5YR 5/3	N	Reddish brown sandy to pebbly siltstone. Siltstone contains pebbles derived mostly from the Pinal Schist. Morita Formation. Dry.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-1G**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
90	Morita Formation					10R 5/3	W	Weak red sandy siltstone. Sand in the siltstone is fine-grained. Few tiny (<0.5 mm) cream-colored bleached spots; slightly calcareous. Morita Formation. Dry.
100						2.5YR 5/6	N	Red clayey siltstone with few coarse sand-sized to fine gravel-sized pebbles of phyllite. Material is very broken. Morita Formation. Wet.
110						2.5YR 5/4 to 4/4	N	Reddish brown clayey siltstone, locally bleached along fractures. Material is highly fractured and powdery. Morita Formation. Damp.
120						2.5YR 5/4	W	Reddish brown fine sandy siltstone. Few very fine opaque grains that appear to be specularite. Locally bleached along fractures; few small (< 1 mm) reduction (bleached) spots along bedding laminae. Morita Formation. Slightly damp.
130						2.5YR 5/6 to 4/4	W	Red to reddish brown fine sandy siltstone with localized bleaching along fractures; < 1 % disseminated fine-grained gray opaques. Morita Formation. Damp.
140						5YR 5/3	W-N	Reddish brown fine sandy siltstone. Uniform color and texture. Slight HCL reactivity is observed only in a portion of the fines. Hue is more yellowish than previous intervals. Morita Formation. Damp.
150						5YR 5/3	N	Reddish brown sandy siltstone with scattered reddish gray phyllite and few quartzite pebbles and coarse sand-sized lithic grains. Morita Formation. Damp.
160						2.5YR 5/4	N	Reddish brown sandy and pebbly siltstone with few light colored reduction spots. Pebbles are phyllite and quartz derived from the Pinal Schist. Hue less yellow than above. Sample is approximately 90% siltstone and 10% gravel clasts; transitional contact zone between the Morita Formation and the underlying Glance Conglomerate. Wet.
170	Glance Conglomerate					2.5YR 5/4	N	Reddish brown conglomerate. Pinal Schist clasts (phyllite and metamorphic quartz) in sandy siltstone matrix. Glance Conglomerate. Damp.
180						2.5YR 5/4	N	Reddish brown conglomeratic sandy siltstone. Material is about 65% sandy siltstone and 35% phyllite pebbles derived from the Pinal Schist. Glance Conglomerate. Damp.
190						2.5YR 5/4	N	Reddish brown fine sandy clayey siltstone. < 1 % fine gray metallic opaques (probably specularite); few small cream-colored reduction spots. Approximately 5% of the sample is small pebble to sand-sized phyllite and quartz clasts. Sample sticky and clayey. Damp.
200						2.5YR 5/4	M	Reddish brown silty sandstone. Sandstone is composed of poorly sorted quartz grains with approximately 1% gray opaques. Sandstone bed in the Glance Conglomerate. Damp.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-1G**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
210	Glance Conglomerate					2.5YR 5/4	N	Reddish brown conglomerate. 50% phyllite and quartz clasts in silty sandstone matrix. Several clay balls. Glance Conglomerate. First water; formation is producing a small amount of water.
220						2.5YR 5/4	N	Reddish brown fine sandy siltstone. Trace amount of coarse sand-sized lithic grains of phyllite and quartz. Few clay balls. Sandy siltstone bed in the Glance Conglomerate.
230						2.5YR 5/3	N	Reddish brown silty fine-grained sandstone. < 1 % black opaques, including magnetite, and possibly some fine-grained specularite. Silty sandstone bed in the Glance Conglomerate. Changed drilling method from Stratex system to reverse circulation with a 10.5" tricone bit at 230 ft bls.
240						2.5YR 5/3	N	Reddish brown conglomerate. Pinal Schist gravel clasts (phyllite and milky quartz) in a silty, well indurated matrix. Tricone bit grinds sample to a greater degree than the Stratex. Glance Conglomerate.
250						2.5YR 4/3	N	Reddish brown siltstone. Uniform texture and color other than few scattered small cream-colored reduction spots. Siltstone bed in the Glance Conglomerate.
260						2.5YR 5/3	N	Reddish brown arkosic silty fine-grained sandstone. Sand grains are poorly sorted, mostly quartz with some fine lithic grains, and about 1% black and gray opaques, including magnetite and specularite. Silty sandstone bed in the Glance Conglomerate.
270						2.5YR 5/3 to 5/2	N	Reddish brown conglomerate. Reddish gray phyllite and white quartz clasts derived from the Pinal Schist in a reddish brown silty sandstone indurated matrix. Glance Conglomerate.
280						2.5YR 5/3	N	Reddish brown pebbly silty sandstone. Sandstone contains approximately 10% phyllite and metamorphic quartz pebbles derived from the Pinal Schist. Glance Conglomerate.
290						2.5YR 5/3	N	Reddish brown conglomerate. Phyllite and metamorphic quartz clasts derived from the Pinal Schist in an indurated silty sandstone matrix. Glance Conglomerate.
300						2.5YR 5/3	N	Reddish brown conglomerate. Reddish gray Pinal Schist clasts in reddish brown, indurated sandy siltstone matrix. Glance Conglomerate.
310						2.5YR 5/3	N	Reddish brown conglomerate. Reddish gray Pinal Schist clasts in reddish brown, indurated sandy siltstone matrix. Glance Conglomerate.
320						2.5YR 4/2 to 4/3	W	Weak red to reddish brown silty fine-grained sandstone. Few fine gravel to sand-sized Pinal Schist (phyllite and metamorphic quartz) clasts. Glance Conglomerate. T.D. = 320 ft bls at 12:59 on 7/31/2008

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0	Basin Fill			100	ML	2.5YR 5/6	N	Red silt. Powdery, loose, dry, no reaction to HCl.
10				100	ML	2.5YR 5/4	M	Reddish brown silt. Powdery, flour-like texture, dry; moderate reaction to HCl. Few caliche chips and chunks.
20		5	5	90	ML	2.5YR 5/4	S	Reddish brown silt. Small amount of gravel and sand. Gravel clasts are up to 1/2" diameter, subangular to rounded, composed of crystalline limestone, fine-grained sandstone, and phyllite and metamorphic quartz derived from the Pinal Schist. Few chunks of caliche. Sand is coarse through very fine-grained. Silt is dry, loose, powdery; very strong reaction to HCl.
30		tr	tr	100	ML	2.5YR 5/4	S	Reddish brown silt. Soft, powdery, flour-like texture, dry, strong reaction to HCl. Some clayey caliche chips. Few fine gravel to coarse sand-sized phyllite clasts with caliche surface coatings.
40		20	55	25	SM	5YR 6/3	S	Light reddish brown silty sand with gravel. Gravel clasts are up to 1" in diameter, angular to rounded, composed primarily of limestone, with few carbonate cemented fine-grained sandstones, phyllite and quartz derived from the Pinal Schist, quartzite, and rare feldspar porphyry. Sand fraction is coarse through very fine-grained, but primarily fine-grained, and composed of quartz, lithic grains, and a small amount of magnetite. Few caliche chunks. Loose dry mix; strong reaction to HCl.
50		25	60	15	SM	5 YR 6/3	S	Reddish brown silty sand with gravel. As above, with decreased fines. Gravel composition is as above with trace volcanic clasts in addition. Little caliche.
60		35	50	15	SM	5 YR 7/3	S	Pink silty sand with gravel. Gravel clasts are up to 1" in diameter, subangular to rounded, composed of primarily dark through light gray crystalline limestone, reddish brown very fine-grained sandstone, and arkosic silty sandstone, with few Pinal Schist, and trace fine volcanic porphyry and tuff clasts. Sand fraction is coarse through very fine-grained, moderately well-graded through to silt. Loose, dry, very strong reaction to HCl.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-3B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
70	Basin Fill		40	60	ML	2.5YR 6/3	S	Light reddish brown sandy silt. Sand fraction is fine to very fine-grained; loose, powdery mix, dry, very strong reaction to HCl.
80		30	50	20	SM	2.5YR 5/3	S	Light reddish brown silty sand with gravel. Gravel clasts are up to 1/2" in diameter, angular to rounded, composed primarily of limestones, quartzite, brick red very fine-grained sandstone, phyllite, white tuff, and trace feldspar porphyry. Few calcareous clay coatings on clasts. Sand fraction is coarse through very fine-grained but primarily fine-grained. Loose, dry, strong reaction to HCl.
90		30	50	20	SM	2.5YR 5/3	S	Reddish brown silty sand with gravel. As above, but gravel fraction has lesser amount of limestone compared to previous intervals, and has abundant phyllite and quartz derived from the Pinal Schist, arkosic sandstone, siltstone, and trace feldspar porphyry. Some calcareous clay coatings on clasts. Sand fraction as above.
100		30	50	20	SM	2.5YR 5/3	S	Reddish brown silty sand with gravel. As above; gravel is comprised of abundant reddish brown sandstone, siltstone, phyllite, and quartz with lesser limestone and trace amounts of feldspar porphyry and white tuff. Few calcareous coatings on weathered surfaces.
110		25	50	25	SM	2.5YR 5/3	S	Reddish brown silty sand with gravel. As above.
120			60	40	SM	2.5YR 6/3	S	Light reddish brown silty sand. Sand fraction is fine to very fine-grained, powdery, loose, dry; composed of quartz and lithic grains and approximately 1% magnetite. Very strong reaction to HCl.
130		20	70	10	SW-SM	7.5YR 7/2	S	Pinkish gray sand with silt and gravel. Gravel clasts are up to 1" in diameter; subangular to well-rounded, composed of dark through very light gray limestone, reddish brown silty sandstone, fine-grained quartz sandstone, phyllite, and trace amounts of fine-grained volcanics and feldspar porphyry. Loose, dry, strong reaction to HCl.
140		80	10	10	GW-GM	7.5YR 7/3	S	Pink gravel with silt. Gravel clasts are up to 1" diameter; subangular to well-rounded, primarily gray to white and pinkish limestone, with some fine-grained sandstone, siltstone, quartzite, phyllite, and white tuff. Few calcite coatings on pebbles. Loose, dry, strong reaction to HCl.
150		80	10	10	GW-GM	5YR6/3	S	Pink gravel with silt. As above except that gravel is fine, up to 1/2" maximum diameter and contains some an angular material.
156								First water. Free water is discharging from cyclone.
160		70	20	10	GW-GM	2.5YR 6/3	S	Light reddish brown gravel with silt and sand. Gravel clasts are up to 1" maximum diameter, angular to well-rounded, primarily reddish brown fine-grained sandstone with calcareous cement, arkosic sandstone, and phyllite, with lesser amounts of light to dark gray limestone, and a small amount of white tuff. Sand fraction is coarse through fine-grained with much coarse-grained; loose, saturated, strong reaction to HCl.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-3B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
170		70	20	10	GW-GM	2.5YR 6/3	M	Light reddish brown gravel with silt and sand. As above; a large component of the gravel is a reddish brown fine-grained sandstone with calcite cement and arkosic sandstone; other clasts include greenish sandstone, crystalline limestone, and white aphanitic to fine porphyritic volcanic tuff. Some calcareous silty sand cement coatings on pebbles. Moderate reaction to HCl.
180		65	30	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel clasts are up to 2" in diameter; angular to subrounded, composed of abundant arkosic sandstone and phyllite, with lesser limestone, white tuff, and trace feldspar porphyry. Few thin calcite-clay-silt cement coatings on weathered pebble surfaces. Sand is coarse to very fine-grained, composed of angular to subangular lithic grains of same composition as the gravel fraction. Moderate reaction to HCl.
190		65	30	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above, with abundant phyllite and arkosic sandstone with lesser reddish brown siltstone; increased amount of white tuff, with only trace amount of limestone in gravel fraction; some calcite-silt-sand coatings. Sand fraction contains abundant lithic grains of same composition; grains are angular to subangular, coarse to fine-grained.
200		65	30	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above, with abundant phyllite, white tuff, and sandstone, lesser amount of siltstone and quartz, and trace chert and limestone in the gravel fraction; few fine sandy calcite coatings. Sand fraction is as above.
210								Missed sample.
220	Basin Fill	40	60	tr	SW	2.5YR 5/3	W	Reddish brown sand with gravel. Sample is ground up (due to drilling). Gravel clasts are mostly subrounded phyllite, quartz, white tuff, siltstone, arkosic sandstone, and trace limestone. Calcareous clay-silt-fine sand coatings on some clasts. Sand fraction is almost entirely lithic grains, coarse to fine-grained, but mostly angular coarse-grained. Weak to moderate reaction to HCl.
230		40	55	5	SW	2.5YR 5/3	W	Reddish brown sand with gravel. As above except that 60% of gravel clasts are white tuff, with lesser phyllite and quartz derived from the Pinal Schist, fine-grained sandstone, and siltstone. Clasts are up to 2" in diameter. Sand fraction is as above. HCl reactivity restricted to calcite-silt-sand cement coatings on clasts.
240		50	40	10	GW-GM	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel ground during drilling process. Gravel clasts include white tuff (approximately 50%), reddish brown fine grained calcareous sandstone and siltstone, chert, pink quartzite, Pinal Schist phyllite and quartz, and trace gray limestone. Moderate reaction to HCl.
250		50	40	10	GW-GM	2.5YR 5/3	M	Reddish brown gravel with silt and sand. Gravel is comprised of approximately 35% white tuff, 35% Pinal Schist phyllite and metamorphic quartz, and 30% clastics including reddish brown and a little green sandstone, siltstone and arkosic sandstone.
260		55	35	10	GW-GM	2.5YR5/2 mottled	M	Weak red gravel with silt and sand. Gravel fraction contains approximately 40% Pinal Schist phyllite and metamorphic quartz, 30% reddish brown siltstone and sandstone, 10% greenish gray claystone, siltstone and fine grained sandstone, 15% white volcanic tuff, and 5% gray and trace yellow limestone. Calcite-sand coatings on some clasts.
270		15	75	5	SW	2.5YR5/1	M	Reddish gray sand with gravel. Sample is largely angular coarse sand-sized particles, probably developed during drilling of coarser material. Composition as above.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-3B**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
280	Basin Fill	55	40	5	GW	2.5YR5/2	W-M	Weak red gravel with silt and sand. Gravel composition differs from previous intervals in that the gravel clasts are mostly clastic sediments including reddish brown, greenish gray, and pale yellow sandstones, arkosic sandstone, and siltstones, accompanied by much lesser amounts of phyllite, tuff and limestone.
290		65	30	5	GW	2.5YR6/3 mottled	W-M	Light reddish brown gravel with sand. Gravel is angular to subrounded, but mostly angular; composed primarily of multi-colored clastic sedimentary lithologies as described in previous interval, with few Pinal Schist and volcanic tuff clasts. Sand is coarse to fine-grained, composed mostly of coarse lithic grains.
300		65	30	5	GW	2.5YR5/2	W	Weak red gravel with sand. Gravel clasts are up to 1/2' in diameter; mostly angular to subangular; composed of reddish brown siltstone, white quartz sandstone, greenish gray arkosic sandstone, pink sandstone, phyllite, quartz, white tuff, gray chert, and trace gray limestone. Clastic sedimentary clasts are most abundant with lesser phyllite and quartz, and little tuff. Calcite and rarely silica cement coatings are present on some clast surfaces. Sand is mostly coarse-grained with little medium and fine-grained material, poorly graded, composed mostly of lithic grains.
310		65	30	5	GW	2.5YR5/2	M	Weak red gravel with sand. As above.
320		75	20	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. Ground up (due to drilling action) mix of primarily reddish brown calcareous sandstone, light colored whitish and light through dark gray limestone, red, white and greenish colored, quartz sandstones, and dolomitic limestone.
330		75	20	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above; gravel clasts include angular to subrounded, up to 1" diameter reddish brown to gray siltstone and arkosic sandstone, gray to white fine-grained quartz sandstone, and trace amounts of phyllite, limestone, and tuff. Sand is mostly angular to subrounded coarse lithic grains with some quartz. Calcite-fine sand cement coatings are common.
340		75	20	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above; clasts are dominantly clastic sedimentary lithologies with about 30% derived from the Pinal Schist. White to pinkish calcite-sand cement coatings.
350		60	30	10	GW-GM	2.5YR 5/3	M	Reddish brown gravel with silt and sand. As above; gravel fraction contains approximately 50% Pinal Schist, abundant reddish brown fine-grained sandstone, siltstone, and arkose, with trace amounts of limestone and chert; lacks tuff seen in previous intervals. White calcite cement coatings common.
360		70	25	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above, with approximately 60% sedimentary and 40% Pinal Schist lithologies in the gravel fraction. Gravel is mostly angular with little subangular to subrounded material. Sand is poorly graded, mostly coarse-grained, but some medium and fine-grained material; composed mostly of lithic grains with lesser quartz. Some calcite cement coatings
370		70	25	5	GW	2.5YR 5/3	M	Reddish brown gravel with sand. As above.
380		60	30	10	GW-GM	2.5 YR 5/3	M	Reddish brown gravel with silt and sand. Lithologies in the gravel fraction include abundant reddish brown sandstone, quartzite, siltstone, and arkose, some yellow sandy limestone with small fossil shell fragments, and small amount of phyllite. Some calcite cement coatings.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
390	Basin Fill	40	50	10	SW-SM	2.5YR 4/2	M	Weak red sand with silt and gravel. Gravel fraction is as above, with increased amount of Pinal Schist to approximately 40%. Sand is coarse to fine-grained, but mostly coarse-grained, moderately well-graded, and composed almost entirely of lithic grains.
400		25	55	20	SC	2.5YR 7/2	M-S	Pale red clayey sand with gravel. Gravel is composed of white tuff, Pinal Schist, and sandstone clasts. Sand fraction is as above. Clay is sticky, cohesive, plastic.
401		75	25		GP	2.5YR 5/2	S	Weak red gravel with sand. Gravel is angular to subrounded, clasts are primarily reddish fine-grained sandstone with calcareous cement, some white limestone, and quartz.
410		30	60	10	SW-SM	5YR6/2	M	Pinkish gray sand with silt and gravel. Gravel clasts are up to 1/2" in diameter; subangular to subrounded; composed of 60% pink, brown, gray and white sandstone, arkosic sandstone, and siltstones, 30% white tuff, 10% phyllite, and trace gray limestone. Sand is mostly coarse lithic grains with smaller amount of medium to fine grains; fine-grained sand is mostly quartz.
418		15	15	70	CL	2.5YR 4/3	M	Reddish brown sandy clay with gravel. Gravel fraction is as above, with few light colored subrounded volcanics; sand fraction is coarse though fine-grained, clay is very soft, sticky, cohesive, plastic. Moderate reaction to HCl.
420		10	15	75	CL	2.5YR4/3	W	Reddish brown clay with sand. Small gravel fraction is composed of phyllite, white tuff, and clastic sedimentary clasts in approximately equal proportions. Weak reaction to HCl.
430		15	15	70	CL	2.5YR 4/3	M	Reddish brown clay with sand and gravel. Gravel and sand fraction are primarily broken up soft claystone, with some reddish fine- grained calcareous cemented sandstone, few quartz, and whitish limestone clasts. Clay is soft, sticky, cohesive, plastic. Moderate reaction to HCl.
440		25	35	40	CL	2.5YR 4/2	W-M	Weak red sandy clay with gravel. Gravel fraction contains 65% weak red mudstone, 30% Pinal Schist, and 5% white tuff. Clay comes out as balls during drilling and as a mix with sand and gravel-sized material. May be clayey rubble near the base of the basin fill.
445			10	90	CL	2.5YR 4/3	M	Reddish brown claystone fragments. Claystone is soft, slightly to moderately laminated, calcareous; about 25% of sample is as clay, soft, sticky, moderately plastic (appears to be derived from broken up claystone). Moderate reaction to HCl. Interpreted to be rubbly zone above the bedrock contact.
450		25	50	25	SC	2.5YR4/3	M	Reddish brown silty claystone fragments 75%; 25% other gravel clasts including tuff, phyllite, and sandstone. Claystone-rich rubble zone above the bedrock contact. Moderate reaction to HCl.
460		25	50	25	SC	2.5YR 4/3 2.5YR 4/4	M	Reddish brown silty claystone fragments with 25% other lithologies, as above. Claystone-rich rubble zone above the bedrock contact.
470	Cintura/ Morita				bedrock	2.5YR 6/3	M	Light reddish brown clay and claystone with some sand. Trace amount of gravel sized material is as fragments of claystone, siltstone, fine-grained sandstone, calcareous cemented claystone. Tabular, slightly laminated, fairly soft overall; clay is very soft, sticky, cohesive, moderately plastic; moderate reaction to HCl.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-3B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
480	Cintura/Morita Formation					2.5YR 6/3	M	Weak red claystone. Moderate reaction to HCl.
490						2.5YR 4/2 2.5YR5/2	M	Weak red silty claystone and clay, claystone is moderately indurated, slightly laminated; clay is very soft, sticky, cohesive; moderate reaction to HCl.
500						2.5YR 5/2	W-M	Weak red claystone, moderately indurated, very weakly laminated, slightly platy; small amount of free clay. Material is broken up during drilling due to its softness; weak to moderate reaction to HCl.
510						2.5YR 5/2	M	Weak red claystone. As above, with trace weak red clayey limestone.
520						2.5Y 7/2	S	Light gray mudstone. Abrupt color change to yellow hue; fairly soft, small amount of orangish brown limonite stain; strong reaction to HCl.
530						10 YR 5/2 7.5YR 5/3	M	Grayish brown sandstone and reddish brown mudstone. Mostly fine-grained, calcareous cemented sandstone, moderately hard; with smaller amount of reddish brown soft, slightly platy, calcareous mudstone. Moderate reaction to HCl.
540						10YR6/1	M	Gray mudstone, composed of indurated clay, silt and fine-grained sand. Moderate reaction to HCl.
550						2.5Y 7/3	M	Pale yellow mudstone and clay. Clay may be derived from grinding of the claystone during drilling; no recognizable bedding or laminations. Moderate reaction to HCl.
560						2.5Y 6/4	M	Light yellowish brown sandstone. Sandstone is fine-grained with calcareous cement; platy, weakly laminated, hard. Some softer reddish brown non-laminated mudstone, easily broken by hand, is also present in the sample. Moderate reaction to HCl.
570						2.5YR 5/2	M	Weak red claystone and clay; fairly soft. Clay is sticky, cohesive, plastic and constitutes approximately 50% of the sample. Moderate reaction to HCl.
580						10YR6/1	M	Gray mudstone, composed of very fine-grained sand, silt and clay; calcareous, fairly soft, slightly platy, weak laminations. Moderate reaction to HCl.
590						10 YR 6/4 2.5YR5/2	S	Light yellowish brown, silty to fine sandy limestone, with few shell fragments. Sample also contains approximately 20% reddish brown mudstone. Strong reaction to HCl. TD = 590 ft bls at 17:05 on 6/11/2008

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0-10	Basin Fill	20	60	20	SM	5YR 6/4	W	Light reddish brown silty sand with gravel. Gravel clasts are up to 1/2" maximum diameter, subangular to well-rounded, composed of numerous quartzite, dark gray fine-grained sandstone, and volcanics. Sand fraction is coarse through very fine-grained, moderately well-graded through to silt. Loose, dry mix, very weak reaction to HCl.
20		80	10	10	GW-GM	5YR 6/4	S	Light reddish brown gravel with silt. Gravel clasts are angular to rounded, up to 1.5" diameter, primarily quartz, dark brown chert, pink sandstone and siltstone, and gray limestone. Many of the gravel clasts have calcareous coatings. Sand fraction is coarse through very fine-grained. Silt fraction is calcareous. Some caliche cement. Loose, dry mix, very strong reaction to HCl.
30			15	85	ML	5YR 6/4	S	Light reddish brown silt with sand, soft flour-like texture; sand fraction is fine to very fine-grained. Trace gravel is pale green feldspar porphyry, limestone, chert, and quartzite. Very strong reaction to HCl.
40		10	40	50	ML	7.5YR 4/4	S	Brown sandy silt. Gravel fraction is primarily light through dark gray limestone, with some white fine-grained sandstone. Sand fraction is medium through fine-grained but primarily fine-grained; silt fraction is calcareous. Small amount of caliche. Loose mix, very strong reaction to HCl
50		10	40	50	ML	7.5YR 4/4	S	Brown sandy silt. As described above. Gravel clasts include feldspar porphyry, phyllite, greenish to yellowish sandstone, limestone, and reddish brown quartzite. Little caliche.
60		20	50	30	SM	7.5YR 5/4	S	Brown silty sand with gravel. Gravel clasts are up to 1.5" diameter, subangular to well-rounded, composed primarily of dark through light gray limestone, arkose, sandstone, chert. Sand fraction is coarse through very fine-grained, moderately well-graded through to silt; silt fraction is calcareous. Loose, mix, very strong reaction to HCl.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
70	Basin Fill	80	10	10	GW-GM	7.5YR 5/4	S	Brown gravel with silt. Gravel clasts are up to 2" in diameter, subangular to rounded, primarily quartz, phyllite, quartzite, limestone, with some coarse to fine-grained calcareous sandstone. Sand fraction is very fine-grained; silt fraction is calcareous. Some caliche. Loose; strong reaction to HCl.
80		10	30	60	ML	5YR 6/4	S	Light reddish brown sandy, clayey silt. Gravel clasts are up to 1" in diameter, composed of mostly quartz, phyllite, volcanics, limestone, and fine-grained sandstone. Sand fraction is coarse through fine-grained; silt and clay fraction is soft, plastic, cohesive, calcareous. Moderate reaction to HCl.
90		10	30	60	ML	5YR 6/4	M	Light reddish brown sandy, clayey silt. As above.
100		10	40	50	ML	5YR 6/4	M	Light reddish brown sandy, clayey silt. As above, except that sand fraction has increased and gravel fraction is much finer, with a 1/2" maximum diameter.
110		50	30	20	GM	5YR 6/4	M	Light reddish brown silty gravel with sand. Gravel clasts are up to 1" maximum diameter, angular to rounded, composed of abundant white tuff, phyllite, quartz, limestones, and fine-grained sandstones. Sand fraction is coarse through very fine-grained, calcareous silt fraction contains some clay; loose mix; moderate reaction to HCl.
120		80	10	10	GW-GM	5 YR 6/4	S	Light reddish brown gravel with silt. Gravel clasts are up to 2" maximum diameter, subangular to well-rounded, composed primarily of white tuff, phyllite, limestone, fine-grained sandstones, and dark gray silicates. Sand fraction is medium through very fine-grained. Silt is calcareous; loose; strong reaction to HCl.
130		25	45	30	SM	5YR 6/4	S	Light reddish brown silty sand with gravel. Gravel fraction is as above. Sand fraction is coarse through fine-grained but is mostly coarse-grained; silt fraction is calcareous. Strong reaction to HCl.
140		50	25	25	GM	5YR 6/4	S	Light reddish brown silty gravel with sand. Gravel clasts are up to 1" maximum diameter, angular to subrounded, composed of abundant quartz, phyllite, medium and fine-grained sandstone with siliceous cement, fine-grained calcareous cemented sandstone; some sandstone clasts exhibit laminar structure. Sand fraction is coarse through fine-grained, moderately well-graded through to silt. Strong reaction to HCl.
150		40	35	25	GM	5YR 6/4	S	Light reddish brown silty gravel with sand; as above. Gravel clasts include abundant reddish brown siltstone, with lesser tuff, phyllite, quartz, and little limestone.
160		30	50	20	SM	5YR 6/4	M	Light reddish brown silty sand with gravel. Gravel fraction is fine, clasts are up to 3/4" maximum diameter, angular to subrounded, numerous quartz, phyllite, quartzite, medium to very fine-grained sandstones with calcareous and siliceous cement, some limestone, only trace tuff. Sand fraction is coarse through very fine-grained; silt fraction is calcareous. Moderate reaction to HCl.

Project Name:		**Bisbee Mitigation Order**						Boring No.: **BMO-2008-4B**

		GR	**SA**	**Fl**				
165	Basin Fill	10	70	20	SM	5YR 6/4	M	First water at 165 ft bls. Light reddish brown silty sand; 10% gravel. Gravel fraction is as above. Sand fraction is very coarse through very fine-grained, well-graded through to silt; calcareous, moderate reaction to HCl.
170		60	20	20	GM	5YR 6/4	M	Light reddish brown silty gravel with sand. Gravel clasts are up to 2" maximum diameter, angular to subrounded, primarily phyllite and reddish brown siltstone, medium to fine-grained sandstone, many coated with caliche; some very weak laminations within the sandstones; numerous quartz and some dark through light gray limestone clasts. Sand fraction is very coarse through very fine-grained, well-graded through to silt. Moderate reaction to HCl.
180		60	20	20	GM	5YR 6/4	M	Light reddish brown silty gravel with sand, as above. Some calcite coatings on gravel clasts.
190		65	30	5	GW-GM	2.5YR 5/3	M-S	Reddish brown gravel with sand. Gravel clasts are subangular to subrounded, = 2 cm diameter, polymictic composed of phyllite, metamorphic quartz, greenish gray fine grained quartz sandstone, dark reddish gray siltstone, white quartz sandstone with few opaques, green arkose, white tuff, gray limestone and chert. Sand is mostly coarse lithic grains. Calcite-clay-fine sand cement coatings on some clasts. Fines estimated, are washing out.
200		75	15	10	GW-GM	2.5YR 6/3	M	Reddish brown gravel with silt and sand. Clasts are 1/2 - 4 cm, occasionally coarser; mostly subangular with some subrounded; composed primarily of phyllite and quartz derived from the Pinal Schist, light colored sandstones, and dark siltstones, with lesser limestone, calcite-fine sand-clay cement coatings are common.
210		75	15	10	GW-GM	2.5YR 6/3	M	Light reddish brown gravel with silt and sand. As above, dominantly Pinal Schist and sandstone with lesser limestone, calcite-sand cement.
220		25	65	10	SW-SC	2.5YR 5/3	W	Reddish brown sand with clay and gravel. Sand is coarse to fine-grained, composed of lithic grains and quartz. Coarse sand is mostly lithic grains; fine sand is mostly quartz. Gravel is subangular to rounded; = 1 cm, phyllite, quartz, sandstone, siltstone, and little limestone.
230		70	20	10	GW-GM	2.5YR 5/3	W	Reddish brown gravel with clay and sand. Gravel is primarily Pinal Schist phyllite and quartz, sandstone, and little limestone. Few calcite-sand cement coatings. Gravel clasts are up to 4 cm on long side. Sand is mostly coarse lithic grains.
240		80	20	tr	GW	2.5YR 5/2	W	Weak red gravel with sand. Gravel clasts are angular to subrounded, up to 4 cm, composed of phyllite and quartz derived from the Pinal Schist, sandstones, reddish brown siltstone, and trace pink feldspar porphyry. Moderate calcite-clay-sand cement coatings. Sand is mostly lithic grains.

		GR	**SA**	**Fl**				
250	Basin Fill	55	40	5	GW	2.5YR 5/3	W	Reddish brown gravel with sand. Gravel clasts are angular to subrounded, up to 3 cm, composed of Pinal Schist, arkosic sandstone, greenish fine-grained quartzite, little limestone and trace volcanics. Sand is coarse to fine-grained, composed of lithic grains, quartz, and trace magnetite.
260		70	25	5	GW	2.5YR 5/3	W	Reddish brown gravel with sand. Gravel clasts are angular to rounded, up to 3 cm, composed primarily of Pinal Schist (phyllite, schist, metamorphic quartz), various sandstones and siltstone with little limestone. Cement coatings composed of clayey carbonate and sand. Sand as above.
270		55	40	5	GW	2.5YR 5/3	W	Reddish brown gravel with sand. Gravel clasts are up to 3 cm, angular to subangular, few small subrounded; composed of mostly Pinal Schist with lesser green, white and gray sandstone and trace limestone and white aphanitic volcanic. Sand is coarse to fine grained, largely lithic grains. Intergrown calcite, clay, and sand cement.
280		88	10	2	GW	2.5YR 5/2	W	Weak red gravel. Gravel clasts include gray and yellow limestone, Pinal Schist (phyllite, schist, metamorphic quartz) and fine-grained sandstones and quartzite in approximately equal proportions. Calcite-sand, clay cement coatings are common. Clasts are angular to subrounded, up to 4 cm. Fines washed out; well making 7,300 gpm.
290		83	15	2	GW	2.5YR 5/3	W	Reddish brown gravel with sand. Clasts include Pinal Schist, green fine-grained quartzite, gray sandstone, with trace limestone and white aphanitic volcanic. Clasts are angular to subrounded, up to 2.5 cm; moderate amount of calcite-fine sand cement. Sand is poorly graded, mostly fine and coarse-grained, composed of lithic grains and quartz.
300		55	45	tr	GW	2.5YR 5/2	W	Weak red gravel with sand. Gravel is angular to rounded, mostly = 1 cm diameter, with sandy calcite cement coatings; composed of mostly Pinal Schist and white feldspathic sandstone, with little green quartzite yellow limestone and trace volcanic and siltstone. Sand is coarse to fine, mostly lithic grains. Calcite-sand coatings.
310		55	45	tr	GW	2.5YR 5/3	W	Reddish brown gravel with sand. Gravel is mostly angular and subangular with some subrounded, = 1.5 cm diameter, mostly Pinal Schist with lesser clasts and little limestone. Sand is fine to coarse, composed mostly of lithic grains; some generated by drilling process.
320		5	85	10	SW-SM	2.5YR 6/2	M	Pale red sand with silt. Sand is coarse to very fine-grained, composed of lithic grains are Pinal Schist and clasts primarily. Changed from Stratex system to reverse circulation drilling with 9 7/8" tricone due to higher volume of water.
330		55	45	tr	GW	2.5YR 5/2	M	Weak red gravel with sand. Gravel is angular to rounded =1 cm diameter, composed of Pinal Schist, gray sandstones and trace siltstone; few calcite-sand cement coatings. Sand is medium to coarse-grained, mostly lithic grains.
340		65	35	tr	GW	2.5YR 5/3	W-M	Reddish brown gravel with sand. Clasts are angular to subrounded, up to 2 cm; composed of Pinal Schist and sandstones with lesser limestone (gray and yellow) and trace tan feldspar porphyry. Sand is medium to coarse, mostly lithic grains calcite-sand coatings on gravel clasts.

		GR	**SA**	**FI**				
350	Basin Fill	55	40	5	GW	10 R 5/3	M	Weak red gravel with sand. Gravel clasts are =1 cm diameter, angular to subangular, 50/50 Pinal Schist/sandstone; few calcite-sand coatings. Sand is coarse to fine-grained, composed of lithic grains in the coarse fraction and mostly quartz in the fine fraction.
360		60	35	5	GW	10YR 5/2	M	Weak red gravel with sand. Gravel clasts are up to 1.5 cm, angular to subrounded, mostly Pinal Schist and green and gray sandstones with little limestone and siltstone; weak calcite cement coatings. Sand as above.
370		55	40	5	GW	10YR 5/3	M	Weak red gravel with sand. As above.
380		55	40	5	GW	10YR 5/3	M	Weak red gravel with sand. As above. At least some coarse sand is probably being created during drilling process, as much of the sand sized particles are fresh-surfaced angular lithic grains.
390		60	35	5	GW	10YR 5/2	W	Weak red gravel with sand. Gravel is angular to subrounded, up to 2 cm, primarily sandstones and Pinal Schist with little gray limestone and siltstone. Few calcite and calcite-sand cement coatings. Sand as above.
400		40	55	5	SW	10YR 5/2	M	Weak red sand with gravel. Gravel composition as above. Sand is coarse thru very fine-grained composed of lithic grains and quartz; some of the sand sized particle are probably generated during drilling. Original gravel content maybe higher. Few calcite-sand cement coatings.
410		40	55	5	SW	10YR 5/2	M	Weak red sand with gravel. As above, same lithologic composition; weak calcite-sand cement coatings on few clasts.
420		40	55	5	SW	10YR 5/2	W	Weak red sand with gravel; as above.
430		40	55	5	SW	5YR 5/3	W-M	Reddish brown sand with gravel. Fines are reddish brown; sand is mottled with abundant weak red tones. Gravel consists of green quartz sandstone, white sandstone, Pinal Schist, buff oolitic shelly limestone, trace red chert. Sand is fine to coarse-grained lithic grains and quartz; some is probably ground-up gravel clasts.
440		30	65	5	SW	2.5YR 5/3	W	Weak red sand with gravel. Gravel clasts include Pinal Schist (phyllite and metamorphic quartz), gray limestone, reddish brown arkose and sandstone. Sand is fine to coarse-grained with abundant coarse angular to subrounded lithic grains. Fine sand and fines wash out of samples.
450		45	50	5	SW	2.5YR 5/2	W-M	Weak red sand with gravel. Gravel clasts are up to 2 cm; angular to subangular, composed primarily of Pinal Schist with lesser sandstones and trace limestone. Sand is fine to coarse-grained, with abundant lithic grains.

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0	Basin Fill	5	10	85	ML	7.5YR 4/4	S	Brown silt, with 10% sand and trace gravel. Gravel is composed of quartz and dark through light gray limestones. Sand fraction is very fine-grained. Material is soft, powdery, loose; strong reaction to HCL.
10		5	10	85	ML-CL	7.5YR 6/4	S	Light brown caliche. Gravel and sand fractions are as described above; with calcareous caliche cement, fairly soft material, dry, very strong reaction to HCL.
20		5	20	75	ML-CL	7.5YR 6/4	S	Light brown caliche. Sand fraction is medium to very fine-grained, calcareous caliche cement; fairly soft, ground to a flour-like powdery texture during drilling. Trace gravel is sandstone and quartz; material is dry; very strong reaction to HCL.
30			25	75	ML-CL	7.5YR 7/3	S	Pink silt with sand, caliche. Soft, homogenous, ground to a gritty powdery texture during drilling; dry, very strong reactions to HCL.
40		5	45	50	CL	7.5YR 7/3	S	Pink sandy silt, caliche. As above; trace gravel. Sand is composed of quartz and limestone lithic grains.
50			25	75	CL	7.5YR 7/3	S	Pink silt with sand, caliche. As above.
60			25	75	ML	7.5YR 6/4	S	Light brown silt with sand, caliche. Sand fraction is coarse through very fine- grained; material is fairly soft, dry; very strong reaction to HCL.
70		15	15	70	ML	7.5YR 5/3	S	Brown sandy silt with gravel. Gravel is composed of angular to subrounded gray limestone with trace quartzite and arkosic sandstone. Sand fraction is fine to very fine-grained, silt is slightly indurated, soft, dry, strong reaction to HCL.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-5M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
80		30	20	50	ML	7.5YR 6/3	S	Light brown gravelly silt with sand. Gravel fraction to 1/2" max. diameter, angular to subrounded, primarily quartz, reddish fine-grained sandstone, and dark through light gray sandstone; sand fraction is coarse through fine-grained, loose mix, dry, strong reaction to HCL.
90			40	60	ML	2.5YR 5/3	S	Reddish brown sandy silt. Sand fraction is coarse through very fine-grained, fairly well-graded through to silt fraction, powdery, loose mix, very strong reaction to HCL.
100		75	15	10	GP-GM	2.5YR 5/3	S	Reddish brown gravel with silt and sand. Gravel clasts are up to 2" max. diameter, angular to subrounded, primarily a mix of quartz, gray limestones, medium to very fine-grained sandstone with calcareous cement, sandy siltstone and siltstone; mottled coloration includes reds, whites, and various shades of gray; sand fraction is coarse through fine-grained but primarily coarse-grained, dry loose mix, strong reaction to HCL.
110		2	48	50	ML	2.5YR 5/3	S	Reddish-brown sandy silt with trace gravel. Gravel fraction is as described above; sand is medium through very fine-grained but is primarily fine to very fine-grained; loose dry mix, very strong reaction to HCL.
120	Basin Fill	20	40	40	SM	2.5YR 5/3	S	Reddish-brown silty sand with gravel. Gravel clasts are up to 3/4" max. diameter, angular to subrounded, mostly reddish fine-grained sandstone with siliceous cement, some calcareous sandstone, gray limestone, silty sandstones and quartz; loose mix, dry; strong reaction to HCL.
130		10	30	60	ML	2.5 YR 5/3	S	Reddish brown sandy silt; 10% gravel. Gravel fraction is as above; sand fraction is fine to very fine-grained, powdery, loose, dry; strong reaction to HCL.
140		30	30	40	ML	2.5YR 5/3	S	Reddish brown sandy silt with gravel. Gravel clasts are up to 1" diameter, angular to rounded, a mix of quartz, sandstones, silty medium to fine-grained sandstone, and gray limestone; some gravel clasts have calcite coatings. Sand fraction is very coarse through very fine-grained, moderately well-graded through to silt; loose mix, dry, strong reaction to HCL.
150			40	60	ML	2.5YR 5/3	S	Reddish brown sandy silt. Sand fraction is medium to very fine-grained but mostly fine-grained. Silt has powdery texture, dry; strong reaction to HCL.
160		30	30	40	ML	2.5YR 5/3	S	Reddish brown sandy silt with gravel. Gravel clasts are up to 3/4" max. diameter, angular to subrounded, mix of schist, fine and medium-grained siliceous-cemented sandstones, some limestones, and quartz. Sand fraction is coarse through very fine-grained but is primarily finer grained material, loose mix, slightly wet, strong reaction to HCL.
Water								Intercepted first water at 160 ft bls.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
170	Basin Fill	75	15	10	GP-GM	Mottled	M	Mottled gravel with silt and sand. Coloration includes grays, reds, whites, greens; gravel clasts are mostly very fine through medium-grained sandstone with some schist and quartz, up to 3/4" in diameter, angular to subrounded. Sand fraction is coarse through fine-grained but primarily coarse-grained; material is loose, saturated. Moderate reaction to HCL.
180		30	55	15	SM	2.5YR 5/4	M	Reddish brown silty sand with gravel. As above except that gravel fraction has decreased and sand fraction has increased, sand is primarily coarse-grained, loose, moderate reaction to HCL.
190		70	25	5	GP	Mottled	M/S	Mottled gravel with sand. Coloration includes reds, grays, whites, light green; gravel clasts are up to 2" max. diameter, primarily dark through light gray, white, and pale green limestones, reddish medium through fine-grained sandstone, quartz, and few schist clasts; subangular to rounded. Sand fraction is coarse through fine-grained, moderately well-graded through silt fraction, fairly clean, loose, moderate reaction to HCL.
200		70	25	5	GP	Mottled	M/S	Mottled gravel with sand. As above; colors are mostly reddish brown, light reddish brown and grays. Calcite-sand cement coatings. Moderate reaction to HCl
210		70	25	5	GP	Mottled	M	Mottled gravel with sand. As above. Calcite-fine sand cement coatings on few clasts. Moderate reaction to HCl.
220		70	25	5	GP	Mottled	M	Mottled gravel with sand. As above. Gravel is angular to rounded with few calcite-sand cement coatings. Moderate reaction to HCl.
230		70	25	5	GP	Mottled	M	Mottled gravel with sand. As above; few calcite-sand cement coatings. Moderate reaction to HCl.
240		80	20		GP	Mottled	M	Mottled gravel with sand. Coloration includes reds, whites, grays, pale green; gravel to 3" max diameter, angular to rounded, primarily limestones, sandstones (with calcareous and siliceous cement, medium to fine-grained, hard), few quartz. Sand fraction is coarse through fine-grained but primarily coarse-grained, loose mix, moderate reaction to HCL.
250		60	40		GP	Mottled	M	Mottled gravel with sand as described above except that gravel fraction is not as coarse with clasts to 1.5" max. diameter, but mostly less that 1/2" in diameter. Rounded surfaces on pebbles. Sand fraction has increased slightly, mostly coarse to very coarse-grained, clean. Moderate reaction to HCL.
260			90	10	SP-SM	5YR 5/3	S	Reddish brown sand with silt. Sand fraction is very coarse through medium-grained but is primarily coarse-grained, loose, fairly clean; strong reaction to HCL.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-5M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
270	Basin Fill	10	85	5	SP	7.5YR 7/3	S	Pink sand; 10% gravel. Gravel clasts are up to 1/2" max. diameter, composed of limestone with lesser amounts of reddish siltstone and sandstone with calcareous cement, phyllite and quartz. Sand fraction is primarily angular to subrounded, very coarse-grained with some finer material, composed of abundant quartz and lithic grains; loose, clean, very little fines. Strong reaction to HCL.
280		10	85	5	SP	7.5 YR 6/3	S	Light brown sand. As above except that material is finer grained overall, but still mostly coarse sand. Some yellowish limestone clasts are present as well as the lithologies listed above. Strong reaction to HCL.
290	Morita Formation				bedrock	5YR 5/4	S	Light reddish brown sandstone with yellowish fine-grained sandstone and limestone. Sandstone is silty, fine-grained, moderately soft, with calcareous cement. Limestone is pale yellow, crystalline. Strong reaction to HCL. Bedrock, Morita Formation.
300						2.5YR 5/4	S	Reddish brown sandy siltstone. Calcareous cement, fairly soft, some chips are platy. Strong reaction to HCL. Morita Formation.
310						2.5Y 7/3	M	Pale yellow sandstone, siltstone, clay stone with some clay. Distinct color change from above unit. Sandstone is very fine-grained with calcareous cement, moderately hard; siltstones and claystones are calcareous and fairly soft; small amount of soft, plastic, calcareous clay. Moderate reaction to HCL.
320						5Y 7/2	W	Light gray clay and sandstone. Sandstone is fine-grained, with calcareous cement, platy, friable, very weakly laminated. Clay is plastic, cohesive, sticky; sandstone and clay are probably as interbedded material. Weak reaction to HCL.
330						5Y7/2	W	Light gray sandstone; fine-grained, calcareous cement, slightly platy, fairly hard but can be broken with fingers; few black flecks, few shell fragments, moderate reaction to HCL.
340						5YR 7/2	W	Light gray clay and clayey sandstone, probably interbedded; as described for the 320' depth.
350						2.5Y 6/3	M	Light yellowish brown sandstone; fine-grained, calcareous cement, slightly platy, hard. Trace disseminated small black spots. Moderate reaction to HCL.
360						2.5Y 5/3	M	Light olive brown silty sandstone and siltstone; fine-grained, slightly platy, calcareous cement, fairly hard. Trace fossil shell fragments, few calcite veinlets and dendrites. Moderate reaction to HCL.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-5M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
370	Morita Formation					2.5Y 6/3	M	Light yellowish brown clay and claystone. Clay is soft, plastic, sticky, cohesive, calcareous; claystone is platy, very weakly laminated, moderately soft, easily broken by fingers, moderate reaction to HCL.
380						2.5Y 5/3	M	Light olive brown sandstone; fine-grained with calcareous cement, slightly platy, hard. Small amount of pale yellow sandy limestone and pinkish gray calcareous sandstone are also present. Moderate reaction to HCL.
390						2.5Y 5/3	M	Light olive brown sandstone; fine-grained with calcareous cement, slightly platy, hard. Moderate reaction to HCL.
400						2.5Y 6/3	M	Light yellowish brown clayey siltstone. Very fine-grained, silty sandstone with interbeds of clay and claystones, siltstones, and silty fine-grained sandstones. Claystones are very weak, laminated, fairly soft; silty sandstone are moderately hard, slightly platy; clay fraction is plastic cohesive sticky, soft; all are calcareous, and react moderately to HCL.
410						2.5Y 6/3	M	Light yellowish brown clay, claystone, and mudstone. Mudstone is composed of lithified clay, silt, and fine sand, and is weakly laminated, fairly soft, calcareous. Clay is plastic, cohesive, soft, calcareous. Moderate reaction to HCL.
420						2.5Y 6/3	M	Light yellowish brown sandstone; fine-grained, calcareous cement, slightly platy, fairly hard; few black flecks maybe free carbon. Weak orange-brown limonite stain on few fractures. Moderate reaction to HCL.
430						10 YR 7/6	M	Yellow silty sandstone, claystone, and clay interbeds as above; all are calcareous. Silty sandstone and claystone are soft, weakly laminated; clay is soft, moderately plastic. Few limonitic fractures; moderate reaction to HCL.
440						2.5Y 6/3	M	Light yellowish brown, fine-grained sandstone. Platy, calcareous cement; hard. Moderate reaction to HCL.
450						5Y 7/3	M	Pale yellow clay with small amount of fragmented sandstone; clay is plastic, cohesive, sticky, soft, calcareous. Moderate reaction to HCL.
460						5Y 7/3	M	60% pale yellow silty sandstone and claystone and 40% pink fine-grained sandstone with calcareous cement. Claystone is fairly soft, very weakly laminated; clay fraction is as described above. Moderate reaction to HCL.

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0	Basin Fill		10	90	ML	7.5YR6/4	S	Light brown silt. Sand fraction is very fine-grained, loose, powdery, dry.
10		trace	15	85	ML	7.5YR6/4	S	Light brown silt with sand. Sand fraction is coarse to very fine-grained, composed of angular to subrounded quartz and lithic limestone and sandstone grains. Few gravel-sized clasts are caliche chunks and gray limestone.
15		trace	10	90	ML	5YR7/3	S	Pink silt. Sand fraction is very fine-grained, loose.
20		trace	10	90	ML	5YR6/4	S	Light reddish brown silt. Sand is coarse to very fine-grained quartz and lithic grains. Trace amount of gravel-sized material is composed of milky quartz clasts and caliche chunks.
27			20	80	ML	5YR7/3	S	Pink silt with sand; caliche cement. Very soft material. Sand fraction is coarse through very fine-grained.
30		trace	25	75	ML	7.5YR7/3	S	Pink silt with sand. Sand is angular to subangular limestone, jasperoid, and sandstone lithic grains and quartz grains. Few gravel-sized particles are limestone and chunks of caliche.
40			20	80	ML	5YR5/3	S	Reddish brown silt with sand; caliche cement, moderately soft. Sand is medium to fine-grained, composed of quartz grains and lithic sandstone and limestone grains.
50			15	85	ML	5YR6/3	S	Light reddish brown silt with sand; caliche cement. Mixed soft and slightly harder caliche layers. Harder layers break into lenticular pieces. Sand is medium to very fine-grained.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-6M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
60	Basin Fill	trace	10	90	ML	7.5YR6/3	S	Light brown silt with sand; caliche cement; soft, loose, powdery material. Sand fraction is fine-grained, composed of free quartz grains, few sandstone and other lithic grains. Trace amount of gravel-sized particles are hard angular chunks of caliche and soft claystone.
70		trace	15	85	ML	7.5YR6/3	S	Light brown silty sand; caliche cement. Trace amount of gravel-sized particles are angular to subangular caliche chunks generated by drilling, gray sandstone, and gray limestone clasts.
75		5	45	50	ML	5YR6/2	S	Pinkish gray sandy silt; trace amount of gravel. Gravel is up to one inch in diameter, angular to subrounded, composed of dark gray schist and light gray to buff limestone. Sand fraction is fine to very fine-grained, weakly cemented.
80		10	60	30	SM	7.5YR6/3	S	Light brown silty sand. Gravel is composed of angular to subrounded clasts of medium to coarse-grained pink sandstone, white quartzite, fine-grained tan sandstone, gray limestone, and trace jasperoid; few clasts have with calcite and/or caliche coatings. Sand is angular to subrounded, coarse through very fine-grained, composed of abundant lithic grains and quartz.
90		5	10	85	ML	5YR6/3	S	Pinkish gray silt with sand; caliche cement. Small gravel fraction; gravel clasts are primarily limestone with some schist, quartzite, granitoids, and arkosic sandstone. Few partial calcite coatings on clasts. Material is fairly soft.
100		15	65	20	SM	5YR6/4	S	Light reddish brown silty sand with gravel. Gravel is up to 1/2" diameter, subangular to rounded, clasts are primarily dark to light gray limestone with lesser amount of gray sandstone and caliche chunks. Sand fraction is medium through very fine-grained, but mostly fine-grained, loose.
110		50	25	25	GM	5YR6/4	S	Light reddish brown silty gravel with sand. Gravel is primarily angular to subrounded, composed of light to dark gray limestone with lesser amount of gray sandstone, and trace granite clasts; few white calcite surface coatings. Sand is medium to very fine-grained but mostly fine-grained, loose.
120		25	50	25	SM	5YR6/3	S	Light reddish brown silty sand with gravel. Gravel is angular to subrounded, primarily dark to light gray limestone with little silicified limestone and phyllite; few calcite surface coatings. Sand fraction is medium through very fine-grained, but mostly fine-grained, moderately well-graded through to silt; loose.
130		10	50	40	SM	5YR6/3	S	Light reddish brown silty sand; 10% gravel. Gravel is composed of gray limestone, chert, arkose, phyllite, granitoid, fine-grained sandstone and siltstone. Sand is fine to very fine-grained. Material is loose, powdery.
140		25	45	30	SM	5YR6/3	S	Light reddish brown calcareous silty sand with gravel. Gravel is primarily dark to light gray limestone with some silicification, fine-grained maroon and gray sandstone, and trace granite. Sand is medium to very fine-grained, but mostly fine-grained.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-6M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
150	Basin Fill	25	45	30	SM	5YR6/3	S	Light reddish brown calcareous silty sand with gravel. Gravel is composed of sandstone, gray limestone, silicified limestone, and small amounts of granitoid and phyllite; clasts are up to 1 cm diameter commonly with calicite-sand coatings. Sand is medium to very-fine grained, but mostly fine-grained.
160		25	45	30	SM	5YR6/3	S	Light reddish brown calcareous silty sand with gravel. As above.
170		25	45	30	SM	5YR6/3	S	Light reddish brown calcareous silty sand with gravel. Gravel is primarily silicified limestone, with gray limestone, pinkish stained phyllite, and fine-grained pink and gray sandstone; most clasts are subangular, some have calcite-sand coatings. Sand is medium to very-fine grained, but mostly fine-grained, composed of quartz and lithic grains.
180		25	45	30	SM	5YR6/3	S	Light reddish brown silty sand with gravel. Gravel clasts are angular to subangular, up to 3/4" diameter, composed of gray limestone with some silicification, maroon sandstone, and caliche chunks. Sand is medium to fine-grained, but mostly fine-grained, composed mostly of quartz with lesser amount of lithic grains. Medium sand grains are angular to subrounded; fine grains are subrounded to rounded.
190		25	45	30	SM	5YR6/3	S	Light reddish brown silty sand with gravel. Gravel fraction contains abundant clasts of pink, gray, green and brown sandstone with little gray limestone and quartzite. Calcite coatings on some clasts. Sand is coarse to very fine-grained, but mostly fine-grained. Coarser sand is dominantly lithic grains; finer sand is mostly quartz.
200		80	15	5	GW	Mottled	S	Mottled gravel with sand. Colors are dark through light grays, pinks, reds, and whites. Clasts are up to 1.5", subangular to rounded, primarily limestone with some sandstone, arkose, phyllite, and quartz, in matrix of calcareous sand and silt. Approximately 15% have thin white calcite surface coatings. First water, saturated.
220		70	10	20	GC	7.5YR6/3	S	Light brown clayey gravel. Gravel is composed of limestone, sandstone, a few jasperoid and quartzite clasts, and caliche chunks. Small sand fraction is coarse through very fine-grained. Fines are primarily clay; very soft, sticky, cohesive, and plastic.
230			20	80	CL	7.5YR6/3	S	Light brown clay and silt with sand. Sand is medium to very fine-grained; fines are a soft, sticky, cohesive clay and silt mix.
240	Morita Formation					10YR7/4 to 2.5Y7/4	S	Very pale brown to pale yellow fine-grained calcareous fossiliferous sandstone and little siltstone. Small amount of silt and clay.
250						2.5Y7/4	S	Pale yellow fine-grained arkosic sandstone and fossiliferous limestone.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-6M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
260	Morita Formation					2.5Y7/4	S	Very pale brown, pale yellow, reddish brown and gray fine-grained arkosic sandstone with a few gray mudstone chips. Rare < 1mm calcite-hematite microfracture fillings.
270						2.5Y8/3	M	Pale yellow, fine-grained, well-sorted arkosic sandstone with calcareous cement. Sand grains are mostly clear quartz with scattered white, red, and black grains. Few fine black oxide spots on partings. Morita Formation
280						2.5Y8/3	M	Pale yellow sandstone, as above.
290						2.5Y8/3	M	Pale yellow sandstone, as above. Few radial black manganese oxide dendrites.
300						2.5Y5/2	M	Pale yellow and reddish brown fine-grained, sandstone with calcareous cement.
307						2.5Y6/4	M	Light yellowish brown claystone. Soft, platy, weakly laminated.
308						2.5Y7/4	M	Pale yellow sandstone, fine-grained calcareous cement.
310						2.5Y7/3	M	Pale yellow arkosic sandstone with siltstone interbeds.
320						2.5Y7/4	M	Pale yellow silty sandstone, fine-grained calcareous cement.
330						2.5Y7/4	M	Pale yellow sandstone, fine-grained calcareous cement.
340						2.5Y7/4	M	Pale yellow with some light reddish brown fine-grained sandstone with calcareous cement. Reddish tones are imparted by weak hematite stain. Trace calcite veinlets. Formation is making approximately 250 gpm water.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-6M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
350	Morita Formation					2.5Y7/4	M	Pale yellow with some light reddish brown fine-grained sandstone with calcareous cement. Approximately 15% is reddish brown (5YR6/3) due to weak hematite stain. Trace amounts of hematite in tiny voids; small black oxide spots locally.
360						2.5Y7/4	M	Pale yellow and some light reddish brown fine-grained sandstone with calcareous cement, as above.
370						2.5Y7/2	M	Light gray sandstone, mudstone, and claystone. 70% fine-grained sandstone; 30% fine mudstone and claystone, probably as interbeds; fine sediments are weakly laminated, platy, soft.
380						2.5Y7/2	M	Light gray siltstone, sandstone, and claystone. 70% siltstone and mudstone, 30% very fine-grained sandstone; all calcareous. Fine sediments are weakly laminated, platy, soft.
390						2.5Y7/4	M	Pale yellow fine grained sandstone, moderately hard, calcareous cement. Localized pink hematite and gold limonitic stain; rare black oxide spots partings.
400						2.5Y7/4	M	Pale yellow fine-grained sandstone, moderately hard, calcareous cement, with minor amount of fairly soft, weakly laminated, light greenish gray claystone. Trace fine-grained disseminated black oxide and oxidized cubic pyrite; weak hematite stain on some fractures.
410						2.5Y7/4	M	Pale yellow fine-grained calcareous silty sandstone, gray to light greenish gray calcareous siltstone and claystone. Fine sediments are fairly soft, platy, weakly laminated, moderately soft.
420						10YR6/2	M	Light brownish gray fine-grained sandstone, calcareous cement, homogeneous. Weak limonitic stain on some fractures.
430						2.5Y6/2	M	Light brownish gray fine-grained sandstone, calcareous cement, homogeneous. Rare small dendritic manganese oxides.
440						10YR6/6	S	Brownish yellow crystalline limestone, locally silty and sandy; less than one foot thick bed; fairly hard. Moderate limonite stain, few black manganese oxide spots.
441						2.5Y6/2	M	Light brownish gray fine-grained sandstone, calcareous cement, homogeneous.

Depth (Ft)	Graphic Log	Estimated %			USCS Symbol	Munsell Color	HCl Rxn	Sample Description
		GR	SA	FI				
10	Basin Fill	50	30	20	GM	2.5YR7/3	S	Light reddish brown silty gravel with sand. Gravel fraction is composed of angular to subangular clasts and clast fragments, composed mostly of gray to grayish brown limestone, and white to gray phyllite with pinkish surface stain, pink to white quartz sandstone, and few silicified limestone, chert, and quartz clasts. Phyllite and some quartz clasts appear to be Pinal Schist. Sand fraction is primarily angular to subrounded, coarse to fine-grained, well-graded through to silt; composed of lithic grains, quartz, and trace fine magnetite. Moderately well-cemented with caliche.
20		15	45	40	SM	2.5YR6/4	S	Light reddish brown silty sand with gravel, moderately well-cemented with caliche. Gravel fraction is angular to subangular, comprised of abundant chunks of caliche generated during drilling. Gravel is composed of phyllite, pale colored sandstones, and limestone with some silicification. Sand fraction is as above.
30		65	15	20	GC	2.5YR8/3	S	Pink clayey gravel with sand, well-cemented with caliche. Material is hard, posing penetration difficulties for the ARCH method of drilling. Gravel and sand as above with abundant chips of caliche. Higher ratio of clay to silt in the fines fraction than above.
40		55	25	20	GC	2.5YR8/3	S	Pink clayey gravel with sand, as above. Material is sufficiently hard that ARCH drilling will be discontinued at this interval, and open hole tricone drilling will proceed until the caliche is fully penetrated.
50			75	25	SM	2.5YR5/4	S	Reddish brown silty sand, caliche cement. Sand is medium to fine-grained but mostly fine-grained, moderately well-graded through to silt; little clay, mostly silt in the fines fraction. Sand grains are angular to subrounded quartz and lithic grains. Material is hard due to caliche cement.
60		60	20	15	GC	2.5YR8/3	S	Pink clayey gravel with sand. Gravel is mostly angular to subangular clasts of gray, reddish, to white sandstone; also rare green sandstone with epidote matrix; some variably colored siltstones; and few gray limestone clasts. Sand fraction is coarse to fine grained, composed mostly of lithic grains with some quartz grains. Moderately to strongly cemented with caliche.
70		15	70	15	SM	2.5YR7/3	S	Light reddish brown silty sand with gravel. Gravel to 1 cm; coarse is angular; fine angular to subrounded; red, gray, and brown fine-grained sandstone and siltstone; rare angular silica and vein quartz. Sand coarse to fine, composed of lithic grains, quartz, and caliche. Moderate to strongly cemented.

Project Name: **Bisbee Mitigation** Boring No.**: BMO-2008-7M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
80	Basin Fill	5	70	25	SC	2.5YR6/3	S	Light reddish brown clayey and silty sand. Sand fraction mostly fine with few coarse grains, poorly graded, composed of lithic grains, quartz, and caliche chips. Gravel pink, brown, gray to greenish fine-grained sandstone, red siltstone, rare green and yellowish brown siltstone, and few angular vein quartz chips. Moderate cementation.
90		5	55	40	SC	2.5YR6/3	S	Light reddish brown clayey sand. Rare gravel mostly angular to subrounded pink, brown, gray, and greenish fine-grained sandstone; little gray limestone, and rare brick red sandstone. Sand is multi-colored sandstone lithic grains with same composition as the gravel.
100		5	70	25	SC	2.5YR6/3	S	Light reddish brown clayey sand. Rare gravel is angular to subrounded, multi-colored sandstones, little gray limestone, rare brick red sandstone, trace phyllite and caliche. Sand fine to medium with rare coarse grains, poorly graded; lithic grains and quartz. Trace blue copper oxide chips. Few sandy clay balls.
110		15	60	25	SC	2.5YR6/3	M	Light reddish brown clayey sand with gravel. Gravel inferred and quantity estimated by drill rig performance. Gravel and coarse sand are angular to subangular and subrounded brown, gray, reddish and greenish fine-grained sandstone with a little siltstone and trace phyllite. Sand quartz and lithic grains of same composition.
120		15	60	25	SC	2.5YR7/3	S	Light reddish brown clayey sand with gravel, as above. Gray, brown, green, and white sandstone and siltstone with a little brownish gray limestone comprise gravel and coarse sand fraction.
130		15	45	40	SC	2.5YR7/3	S	Light reddish brown clayey sand with gravel. Gravel inferred and quantity estimated by drill rig performance. Gravel and coarse sand are mostly angular brown, gray, pink, and some white sandstone with minor siltstone, limestone and rare quartz-limonite vein fragments. Sand fine to coarse, mostly fine, moderately well-graded, composed mostly of lithic grains and chips of same composition as the gravel fraction.
140		tr	30	70	CL	2.5YR7/2	S	Pale red sandy clay. Sand is coarse to fine-grained, moderately well-graded through to silt. Few gravel-sized particles and most of the sand-sized particles are brown, gray, and white sandstone; reddish brown and green siltstone; trace amount of phyllite, and vein quartz. Few clay balls; clay is sticky, cohesive.
150		5	35	60	CL	2.5YR7/2	S	Pale red sandy clay. As above, with a few chloritic siltstone and epidotized green sandstone grains in addition.
160			20	80	CL	2.5YR7/2	S	Pale red clay with sand. Clay is sticky and cohesive. Sand fraction is mostly fine-grained; well-graded through to silt; composed of quartz, lithic grains, and trace magnetite.
170			40	60	CL	2.5YR6/3	S	Light reddish brown sandy clay, as above but with higher percentage of sand.
180			15	85	CL	2.5YR6/3	S	Light reddish brown clay with sand, as above with smaller sand to fines ratio.
190			30	70	CL	2.5YR6/3	S	Light reddish brown sandy clay. Sand is composed of fine-grained quartz, lithic grains, and trace magnetite.

Project Name: **Bisbee Mitigation**								Boring No.**: BMO-2008-7M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
200	Basin Fill		30	70	CL	2.5YR6/3	S	Light reddish brown sandy clay, as above.
210		80	10	10	GW-GC	2.5YR6/3	S	Light reddish brown gravel with clay. Gravel angular to subangular gray, brown, and locally greenish phyllite (Pinal Schist) with few sandstone and quartz clasts. Hard caliche surface coatings are present on some clasts. Sand is quartz and sand-sized sandstone and phyllite lithic grains; poorly graded; mostly coarse and very fine-grained.
216		80	10	10	GW-GC	2.5YR6/3	S	Light reddish brown gravel with clay, as above. Few caliche chips and coatings on gravel clasts. Material is damp, trace amount of water.
220		80	10	10	GW-GC	2.5YR6/3	S	Light reddish brown gravel with clay. Gravel clasts are angular to subrounded pinkish brown to greenish fine-grained sandstone, gray phyllite, milky to nearly clear quartz, small amount of gray limestone, siltstone, and arkose. Sand fraction is poorly graded, composed of coarse angular lithic grains and fine-grained quartz and lithic grains. Some silt as well as clay is present in fine fraction.
230		75	20	5	GW	2.5YR6/3	S	Light reddish brown gravel with sand. Color logged is that of the fines coating the gravel; gravel clasts themselves are darker and multicolored. Gravel is comprised of gray to brown sandstone, siltstone, and phyllite clasts. Sand is primarily lithic grains of same composition as gravel with some quartz grains. Formation began making water at approximately 235' bls.
240		85	10	5	GW	2.5YR6/3	S	Light reddish brown gravel. Coarse gravel zone. Gravel clasts are angular broken chunks to subangular clasts up to 3cm on the long side composed of green to brown fine-grained sandstone, phyllite and metamorphic quartz derived from the Pinal Schist, with few siltstone clasts. Few clasts have caliche and/or calcite surface coatings.
250		50	45	5	GW	2.5YR7/3	S	Light reddish brown gravel with sand. Gravel is as described in the previous interval. Sand is mostly coarse-grained lithic fragments and grains of the same composition as the gravel. HCl reactivity is restricted to the fine fraction and carbonate coatings.
260		60	35	5	GW	2.5YR7/2	M	Pale red gravel with sand. Gravel is angular to subrounded; gravel and most sand-sized particles are mostly brownish with a little greenish sandstone, grayish brown phyllite, and quartz. Sand is largely coarse grained. Caliche cement coatings are present on a few clasts. HCl reactivity restricted to fine fraction and the caliche.
270		75	20	5	GW	2.5YR6/3	M	Light reddish brown gravel with sand, as above. Sand is comprised mostly of coarse sand-sized lithic fragments and grains of the same composition as the gravel.
280		25	65	10	SW-SM	2.5YR6/3	S	Light reddish brown sand with silt and gravel. Gravel is as above with a few clasts of siltstone in addition. Sand is mostly medium to coarse-grained, composed of lithic grains and quartz. A few grains have caliche coatings.
290		65	30	5	GW	2.5YR6/3	S	Light reddish brown gravel with sand. Gravel is comprised of gray, brown, greenish sandstone, siltstone, and phyllite (Pinal Schist) clasts. Sand is coarse to fine-grained, composed of lithic and quartz grains.
300		75	20	5	GW	2.5YR5/2	M	Weak red gravel with sand. Gravel is angular to subangular, composed of gray to grayish brown sandstone and siltstone, with some green siltstone, grayish brown phyllite, and metamorphic quartz clasts. Sand is poorly graded, comprised mostly of coarse sand-sized lithic grains, with trace magnetite. Approximately 20% of the gravel clasts have crystalline calcite cement coatings. HCl reaction is confined to the fine fraction and calcite cement.

Project Name: **Bisbee Mitigation**								Boring No.**: BMO-2008-7M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
310	Basin Fill	70	20	10	GW-GM	2.5YR5/2	M	Weak red gravel with silt and sand. As above, with slight increase in fines.
320		70	25	5	GW	2.5YR5/2	W	Weak red gravel with sand. Gravel is angular to subangular, coarse to 3 cm; gray, brown, greenish and white fine to medium grained sandstone and siltstone, with grayish brown phyllite, and quartz, brown siltstone, and rare oolitic limestone clasts, 20% have calcite-fine sand surface coatings. Sand well-graded, coarse to fine, lithic grains and quartz.
330		30	65	5	SW	2.5YR5/2	W	Weak red sand with gravel. Gravel is angular to subrounded, to 1 cm in; phyllite, schist and metamorphic quartz clasts with light to dark gray, brown, and dull green sandstone and siltstone. Limonite and manganese oxides on microfractures in sandstone clasts. Sand well-graded, fine to coarse; lithic grains, quartz, and trace magnetite.
340		30	65	5	SW	2.5YR5/2	W	Weak red sand with gravel. Gravel angular to subangular; phyllite, metamorphic quartz, with light to dark gray, brown, and dull green sandstone, greenish siltstone, trace gray chert or jasperoid. Sand well-graded, coarse to fine, subrounded lithic and quartz grains with trace fine-grained magnetite.
350		65	30	5	GW	2.5YR5/1	W	Reddish gray gravel with sand. Gravel and coarse sand-sized particles are primarily schist, phyllite, and metamorphic quartz with lesser amount of gray, brown, and dull green sandstone and little brown calcareous siltstone clasts with surface coatings of calcite and fine sand. Sand fraction well-graded; coarse to medium, lithic grains, quartz and trace magnetite.
360		70	25	5	GW	2.5YR6/1	M	Reddish gray gravel with sand. Gravel subangular to angular, to 1 cm phyllite, schist, and metamorphic quartz, with gray, pinkish brown, white, and dull green fine to medium-grained sandstone; brown calcareous siltstone; and calcite-limonite altered silty limestone. Sand coarse to fine, angular to subrounded, well-graded; coarse mostly lithic, fine mostly quartz with trace magnetite.
370		55	30	15	GC	2.5YR6/2	M	Pale red clayey gravel with sand. Gravel clasts are dominantly Pinal Schist as above, with lesser clastics. Sand is as above. HCl reaction is confined to the fines fraction, calcite coatings on clasts, and the few calcareous sandstone and siltstone clasts.
380		35	55	10	SW-SM	2.5YR6/3	M	Light reddish brown sand with silt and gravel. Gravel clasts are angular to subangular, dominantly Pinal Schist as above with lesser amount of sandstone clasts. Sand fraction is coarse to fine-grained, well-graded. Coarse sand-sized particles are mostly lithic grains; finer sand is quartz with trace magnetite.
390		50	40	10	GW-GM	2.5YR6/3	M	Light reddish brown gravel with silt and sand. Gravel is angular to subangular, composed almost entirely of Pinal Schist clasts (phyllite, schist and metamorphic quartz) with little sandstone; few calcite surface coatings. Sand fraction as above.
400		40	55	5	SW	2.5YR5/2	M	Weak red sand with gravel. As above but with fewer fines and increased sand fraction.
410		20	75	5	SW	2.5YR5/3	W	Reddish brown sand with gravel. Gravel continues to be largely composed of Pinal Schist with lesser sandstone, as above. Sand is coarse to fine-grained, moderately well-graded, composed of angular to subrounded quartz and lithic grains with trace magnetite.
420		65	30	5	GW	2.5YR5/2	W	Weak red gravel with sand. Gravel angular to subangular, to 2 cm, schist, phyllite, and metamorphic quartz with pinkish brown fine-grained sandstone, and few green siltstone clasts. Some caliche surface coatings. Sand coarse to fine, well-graded, quartz, lithic grains, and trace magnetite.

Project Name: **Bisbee Mitigation** Boring No.**: BMO-2008-7M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
430	Basin Fill	40	55	5	SW	2.5YR5/3	M	Reddish brown sand with gravel. Gravel is as above. Sand is coarse to fine-grained, but mostly medium-grained, well-graded, composed mostly of subangular to subrounded quartz with some lithic grains.
440		70	25	5	GW	2.5YR5/3	W	Reddish brown gravel with sand. Gravel is up to 2 cm on a long side, angular to subangular, mostly pinkish brown to gray Pinal Schist clasts, with lesser amounts of light pink to light gray sandstone. Sand is coarse to fine-grained but mostly subangular coarse lithic grains with lesser quartz. Calcite cement with fine sand coatings are present on some gravel clasts.
450		55	40	5	GW	2.5YR5/3	W	Reddish brown gravel with sand. Gravel angular to subangular, primarily pinkish brown to gray Pinal Schist with light pink to light gray sandstone, and trace granite. Sand coarse to fine but mostly medium, subangular to subrounded, quartz with lithic grains and trace magnetite.
460		30	65	5	SW	7.5YR5/2	W	Brown sand with gravel. As above with greater sand to gravel ratio. Color change from reddish brown to brown.
470		55	35	10	GW-GM	7.5YR6/3	M	Light brown gravel with silt and sand. Gravel pea-sized (< 1 cm), angular to subrounded; clasts of Pinal Schist with fine-grained arkose, quartz sandstone, little siltstone, and trace rhyolite. Sand well-graded, coarse to fine, coarse sand is subangular lithic grains, medium subrounded quartz and lithic grains grading to subrounded fine quartz sand.
480		40	55	5	SP	7.5YR6/3	S	Light brown sand with gravel. Gravel subangular, white, gray, and pinkish sandstone; brown, pinkish, and gray siltstone; little phyllite; and trace metamorphic quartz. Sand coarse to fine, mostly coarse, poorly graded. Coarse sand mostly lithic grains; fine sand mostly quartz with few lithic grains and trace magnetite.
490	Morita Formation					2.5YR6/1	S	Bedrock. Reddish gray calcareous clayey siltstone, Morita Formation. Fine-grained black flecks may be carbon. Trace reddish gray fine-grained arkosic sandstone present as well. Formation is soft; the ARCH casing sinking into the formation under its own weight.
500						2.5YR6/1	S	Reddish gray calcareous and carbonaceous siltstone. Local fine sedimentary rip-up textures. Few quartz microveinlets. Less clayey and more competent that interval above.
510						2.5YR6/2	S	Pale red siltstone; soft, friable, thinly laminated; drill cuttings are as lenticular chips.
520						2.5YR6/2	S	Pale red siltstone, as above, with some calcite fracture fillings.
530						2.5YR5/3	W	Reddish brown siltstone. Few small light reduction spots.
540						7.5YR6/1	W	Gray arkosic sandstone; fine-grained, well sorted grains, weakly laminated, some fine cross bedding. Siliceous cement with a small amount of calcite.

Project Name: **Bisbee Mitigation**								Boring No.**: BMO-2008-7M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
550	Morita Formation					7.5YR7/2	N	Pinkish gray sandstone; fine-grained, few reddish and black (possibly fine carbon) flecks, moderately hard, siliceous cement.
560						2.5YR4/3	S	Reddish brown mudstone; soft, laminated, small lenses of clay locally. Few gravel sized clasts of white fine-grained limestone.
565						2.5YR4/3	S	Reddish brown mudstone to siltstone; soft, laminated, as above with some very fine-grained sand; sand content greater than previous interval.
570						5YR3/2	S	Dark reddish brown mudstone; 1% white finely vuggy cryptocrystalline quartz chips.
580								
585						5YR5/1- 5YR4/1	N-W	Gray to dark gray arkosic sandstone; very fine-grained, silty, lacks laminations; siliceous cement, moderately hard, few white CaCO3 chips, probably occurring as calcite fracture fillings.
590						2.5YR5/1	N-W	Reddish gray fine-grained arkosic siltstone; uniformly colored, slightly laminated; trace white calcite fracture fillings.
600						2.5YR5/1	W	Reddish gray calcareous siltstone to very fine-grained sandstone. Rare greenish gray small reduction spots Formation fluctuates alternately between siltstone and very fine-grained sandstone.
610						2.5YR5/1	S	Reddish gray calcareous arkosic sandstone; very fine-grained, well-sorted, slightly laminated; uniformly colored, moderately hard. Few white loose calcite chips, and calcite fillings in fine fractures.
620						2.5YR5/1	S	Reddish gray silty limestone, calcareous siltstone, to silty calcareous very fine-grained arkosic sandstone; sand grains are well-sorted quartz with few opaques and feldspars; few white calcite and silica chips.
630						2.5YR5/1- 2.5YR4/1	W-M	Reddish gray to dark reddish gray siltstone and very fine-grained silty arkosic sandstone. Few amber colored calcite-filled vugs; also has tiny (<.25 mm) angular voids, many empty, others filled with calcite and other non-HCl-reactive clear mineral, possibly selenite.
640						7.5YR5/1 - 7.5YR7/1	M	Gray to light gray fine-grained arkosic silty sandstone, well sorted. Orange calcite and white silica fill few small <1mm vugs. Small <1mm black disseminated oxide (manganese?) spots.
650						2.5YR5/3	S	Reddish brown calcareous sandy siltstone, fine sandstone, with some clay interbeds. Sandstone is hard; claystone soft friable. Locally sandstone layers contain small siltstone lithic fragments. Few small <1mm reduction spots; trace black oxide spots.
660						5YR5/2	N-W	Reddish gray siltstone with very fine-grained silty sandstone layers; few white calcite fracture coatings.

Project Name: **Bisbee Mitigation** Boring No.**: BMO-2008-7M**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
670	Morita Formation					5YR5/3 -	M	Reddish brown to reddish gray interbedded hard siltstone, very fine-grained hard
						5YR5/2		sandstone, and soft claystone. Slightly laminated.
680						5YR5/3	M	Reddish brown moderately laminated interbedded calcareous siltstone, sandstone,
								and claystone. Sandstone is fine-grained, well-sorted, and hard; siltstone and
								claystone are moderately soft, easily broken into platy fragments.
690						5YR5/3	M	Reddish brown calcareous sandstone, siltstone and claystone, as above.
700						5YR4/2 -	S	Dark reddish gray, reddish gray, and pinkish gray very fine-grained silty arkosic
						5YR6/2		sandstone
710						5YR5/2	M	Reddish gray silty arkosic sandstone, as above.
720						5YR4/2	M-S	Dark reddish gray sandy siltstone; weakly laminated; sand grains are very fine-
								grained, well-sorted.
730						5YR4/2	M-S	Dark reddish gray fine sandy siltstone, weakly laminated; few < 1mm thick calcite
								fracture fillings.
740						5YR4/2	W-N	Dark reddish gray siltstone, locally with about 10% very fine-grained, well-sorted
								arkosic sandstone, moderately laminated, moderately soft.
750						5YR4/2	W	Dark reddish gray siltstone, locally sandy, as above.

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
10	Basin Fill	60	25	15	GM	5YR 6/4	S	Light reddish brown silty gravel with sand. Gravel is angular to subrounded, up to 2 cm in diameter, composed primarily of Pinal Schist (phyllite and metamorphic quartz) with lesser amounts of gray limestone and gray chert, and small amounts of white fine-grained quartzite and silicified limestone with fossil fragments. Sand is fine to coarse-grained, subrounded, composed of quartz and lithic grains. Strong caliche cement.
20		55	35	10	GP-GM	5YR 8/3	S	Pink gravel with silt and sand with caliche cement. Gravel clasts are = 1 cm in diameter, comprised of subangular to subrounded caliche chunks, Pinal Schist, gray limestone, with minor greenish chert clasts. Sand is coarse to fine-grained with coarse grains most common; composed largely of quartz with some lithic grains. Fines are primarily calcareous clay.
30		35	40	25	SM	5 YR 6/4	S	Light reddish brown silty sand with gravel. Gravel clasts are angular to rounded, equidimensional to elongate up to 3 cm on long side, mostly Pinal Schist with little gray limestone and quartzite. Sand is mostly coarse and fine-grained with little medium-grained material, poorly graded, composed of quartz and lithic grains. Caliche cement.
40		60	30	10	GP-GM	5YR 6/3	S	Light reddish brown gravel with silt and sand. Gravel is mostly fine (= 1 cm in diameter), angular to rounded, primarily Pinal Schist with lesser amount of limestone and small amounts of chert and red siltstone. Sand is coarse to fine-grained, composed of quartz and lithic grains; strong caliche cement.
50		50	40	10	GP-GM	5YR 7/2	S	Pinkish gray gravel with silt and sand. As above; caliche cement.
60		65	20	15	GC	5YR 6/3	S	Light reddish brown clayey gravel with sand. Gravel is angular to subrounded, up to 4 cm in diameter, composed of gray limestone, Pinal Schist, sandstone, quartzite, and siltstone. Fewer Pinal Schist clasts than in previous intervals. Many clasts have either calcareous clay or caliche coatings. Sand is fine to coarse-grained, composed of quartz and lithic grains.
70		55	30	15	GC	5YR 7/2	S	Pinkish gray clayey gravel with sand. Gravel is angular to subrounded; mostly = 1 cm in diameter; composed of clasts of limestone, yellowish to gray sandstone, red and green siltstone, Pinal Schist (phyllite and metamorphic quartz), reddish brown sandy siltstone, and arkose. Limestone and clastic sediment clasts are more abundant than Pinal Schist clasts. Very little caliche; some calcareous clay coatings. Sand is fine to coarse-grained, composed of quartz and lithic grains.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
80		55	30	15	GC	5YR 6/3	S	Light reddish brown clayey gravel with sand. Gravel is mostly angular and subangular with lesser subrounded clasts up to 2 cm in diameter; composed primarily of clastic sediments including reddish brown, tan and green fine-grained sandstone, red and green siltstone, with smaller amounts of phyllite, quartz and limestone. Sand is fine to coarse-grained, composed mostly of lithic grains with lesser quartz. Calcareous clay matrix coatings. Very little caliche.
90		50	35	15	GC	5YR 6/3	S	Light reddish brown clayey gravel with sand, as above. Gravel clasts are mostly clastic lithologies (various sandstones and siltstones) with lesser phyllite, quartz, limestone, and chert. Calcareous clay coatings and matrix material.
100		70	15	15	GC	5YR 6/3	S	Light reddish brown clayey gravel with sand. Gravel is angular to subrounded; finer pebbles more rounded; coarser clasts are angular to subangular. Clasts lithologies are primarily reddish brown, gray, green, and white sandstone, arkosic sandstone, and siltstone, with lesser chert, phyllite, quartz, limestone, and trace white volcanics. Gravel clasts are up to 3 cm in diameter; caliche-clay coatings are common. Few sandy clay balls.
110		45	40	15	GM	5YR 7/3	S	Pink clayey and silty gravel with sand. Gravel is mostly subangular to subrounded, = 1 cm in diameter, grading to coarse sand. Clast lithologies are primarily clastic sediments as above with lesser phyllite, limestone, and quartz. Sand is coarse to fine-grained, well-graded through to silt, composed of quartz and lithic grains. Clayey, sandy caliche occurs as coatings on gravel clasts and as chunks in the sample.
120	Basin Fill	35	45	20	SM	5YR 7/2	S	Pinkish gray silty sand with gravel. Gravel is =1 cm in diameter, grading to coarse sand; angular to subrounded; composed primarily of reddish brown, gray, green, and white sandstone and siltstone, with lesser phyllite, quartz, and limestone. Clayey carbonate coatings on some clasts; some caliche chips in the sample. Sand is fine to coarse-grained, well-graded through to silt, composed of quartz and lithic grains.
130		30	45	25	SM	5YR 7/3	S	Pink silty sand with gravel. Gravel is angular to rounded; angular freshly broken pieces are up to 2 cm in diameter; rounded to subrounded pebbles are = 1 cm in diameter. Composition of gravel is as above, however phyllite and limestone clasts have increased to about equal to the amount of clastic sedimentary clasts; few caliche chunks. Sand is as above.
140		55	30	15	GM	5 YR 6/3	S	Light reddish brown silty gravel with sand. Gravel clasts are angular to subrounded, some with mixed clay, fine sand, and carbonate coatings; composed primarily of clastic sediments including abundant greenish gray fine-grained sandstone, with lesser phyllite clasts and little limestone. Sand is as above.
150		40	30	30	GM	2.5YR 6/3	S	Light reddish brown silty gravel with sand. Gravel clasts are subangular to subrounded, composed of abundant material derived from the Pinal Schist, clastic sediments, and lesser amount of limestone; some calcite-silt-fine sand coatings are present. Sand is fine to coarse-grained, composed of lithic grains and quartz.
160		70	15	15	GM	2.5YR 6/4	S	Light reddish brown silty gravel with sand. Gravel clasts are mostly = 1 cm in diameter with few 2 cm clasts; angular to subangular with few subrounded pebbles. Gravel is composed primarily of phyllite and metamorphic quartz, some sandstone and siltstone, and trace limestone. Few carbonate coatings on clasts. Sand as above.
170		70	15	15	GM	2.5YR 6/3	S	Light reddish brown silty gravel with sand, as above. The amount of Pinal Schist (phyllite and metamorphic quartz) clasts is approximately equal to the amount of clastic sedimentary clasts, with little gray limestone. Few calcite-fine sand cement coatings. Sand as above.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
173	Basin Fill	70	15	15	GM	5YR 6/2	S	Pinkish gray silty gravel with sand. Driller reports that the formation is becoming hard at this depth. Material is as above with more abundant calcite-fine sand coatings indicating a greater degree of cementation. Sand as above.
180		40	35	25	GM	2.5YR 7/2	S	Pale red silty gravel with sand. Gravel clasts are = 1 cm diameter, grading to coarse sand; angular to subrounded; composed primarily of gray, reddish brown, and green fine-grained sandstones and siltstones, with lesser phyllite, quartz and trace limestone. Sand is coarse to fine-grained, composed mostly of lithic grains. Few calcite-fine sand cement coatings.
190		20	60	20	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel. Gravel clasts are mostly subangular to subrounded, with few angular and rounded clasts. Clasts are =1 cm diameter, grading to coarse sand, composed primarily of variably colored sandstones and siltstones, with lesser phyllite. Few calcite-fine sand cement coatings. Sand is fine to coarse-grained, composed primarily of lithic grains, particularly in the coarser fraction.
200		85	10	5	GP	2.5YR 6/3 - 2.5YR 7/2	M	Light reddish brown to pale red gravel. Gravel clasts are mostly subangular to rounded, up to 2 cm but mostly =1 cm in diameter, composed primarily of reddish brown, gray, and greenish sandstone, siltstone, and arkosic sandstone, with lesser phyllite and small amount of gray silty limestone. Calcite-sand cement surface coatings are common. Few chunks of cemented silty sand are present in the sample.
210		60	25	15	GM	2.5 YR 6/3	S	Light reddish brown silty gravel with sand. Gravel clasts are = 1 cm in diameter, mostly subangular to subrounded with a few rounded pebbles. Calcite-sand cement coatings are common. Clast lithologies are as above. Sand is coarse to fine-grained, subangular to subrounded, mostly fine-grained and coarse-grained with little medium-grained, poorly graded.
220		35	45	20	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel. Gravel is fine (= 1 cm diameter) with some calcite-sand coatings; clasts are angular to subrounded, with lithic compositions as above. Sand is coarse to fine-grained, well-graded through to silt, angular to subrounded; coarse sand particles are mostly lithic grains; fine sand is mostly quartz with few lithic grains.
230		35	45	20	SM	2.5YR 6/3	S	Light reddish brown, silty sand with gravel, as above. Abundant 0.5 - 1.0 cm diameter subrounded pebbles in the gravel fraction.
240		30	55	15	SM	5YR 6/3	S	Light reddish brown silty sand with gravel. Gravel clasts are angular to subrounded, mostly subangular; = 1 cm in diameter; primarily reddish brown sandstone, with lesser amount of gray, green and white sandstone, smaller amount of phyllite, and trace limestone. Some calcite-sand coatings. Sand is mostly medium-grained with some fine and coarse grains; composed mostly of quartz with few lithic grains; loose, dry.
250		25	65	10	SW-SM	5 YR 5/3	S	Reddish brown sand with silt and gravel. Gravel clasts are angular to subrounded, =1 cm in diameter; mostly reddish brown sandstone, siltstone, and arkose, with lesser phyllite and little green siltstone. Sand is coarse to fine-grained, well-graded, loose. Coarse sand is composed of lithic grains; finer sand is mostly quartz. Calcite-sand coatings on some gravel clasts.
260		20	70	10	SW-SM	5YR 5/3	S	Reddish brown sand with silt and gravel. As above, with slightly less gravel; gravel clasts are = 1 cm in diameter, grading to coarse sand. Sand as above, loose, causing difficulty lifting cuttings.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated % GR**	**SA**	**FI**	**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
270	Basin Fill	15	65	20	SM	5YR 6/3	S	Light reddish brown silty sand with gravel; some clay in finer fraction as well. Gravel clasts are angular to subangular, mostly = 1 cm in diameter, dominantly phyllite and quartz derived from Pinal Schist, with approximately 10% fine-grained sandstone and siltstone clasts; calcite-sand cement on some surfaces. Sand is well-graded, composed of fine to coarse-grained quartz and lithic grains.
280		75	10	15	GC	5YR 7/3	S	Pink clayey gravel. Gravel clasts are mostly =1 cm in diameter grading to coarse sand, composed dominantly of angular to subangular phyllite with lesser amount reddish brown fine-grained sandstone, with calcite-fine sand cement coatings. Sand is mostly coarse and fine-grained; poorly graded.
290		60	20	20	GC	5YR 7/3	S	Pink clayey gravel with sand. As above, with increased sand and fines. Partial calcite-fine sand cement coatings on most gravel clasts.
300		tr	70	30	SC	5YR 7/4	S	Pink clayey sand. Sand is coarse to fine-grained, but mostly coarse and medium-grained, moderately well-graded, grains are subangular to subrounded, composed of phyllite and quartz.
310		20	60	20	SC	5YR 6/3	S	Light reddish brown clayey sand with gravel. Some silt also present in the fines fraction. Gravel clasts are angular to subangular, =1 cm in diameter, composed primarily of phyllite; few calcite cement coatings. Sand is mostly phyllite lithic grains and quartz.
320		15	65	20	SC	5YR 6/4	S	Light reddish brown clayey sand with gravel. As above, mostly phyllite with little sandstone and siltstone in gravel fraction. Sand fraction is also mostly phyllite with fewer sandstone and siltstone lithic grains and quartz.
330		65	20	15	GM-GC	2.5YR 6/3	S	Light reddish brown clayey-silty gravel with sand. Gravel is composed of about 90% phyllite and quartz clasts derived from Pinal Schist; with 10% fine-grained sandstone and siltstone; clasts are angular to subrounded; many phyllite clasts are tabular. Few calcite coatings. Sand is fine to coarse-grained. Some clay is present as well as silt in the fines fraction.
340		65	20	15	GC	2.5YR 6/3	M	Light reddish brown clayey gravel with sand. Gravel is composed primarily of phyllite with little sandstone and siltstone clasts; clasts are angular to subrounded, =1.5 cm in diameter, grading to coarse sand. Few calcite-fine sand coatings.
350		5	90	5	SW	5YR 5/3	W	Reddish brown sand. Sand is coarse to very fine-grained, well-graded, loose; grains are subangular to subrounded, composed of quartz and phyllite lithic grains. Gravel as above with few calcite coatings; one 3 cm diameter quartzite clast. FIRST WATER @ 357ft bls
360		10	85	5	SW	5YR 5/3	W	Reddish brown sand, as above. Gravel fraction is composed of = 1 cm diameter angular to subangular phyllite clasts with calcite-sand cement coatings.
370		35	60	5	SW	5YR 5/3	M	Reddish brown sand with gravel. Sand as above. Gravel is composed of mostly subangular, tabular =1 cm phyllite clasts with calcite-sand cement coatings.
380		60	35	5	GP	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel is composed of angular to subrounded, often tabular =3 cm clasts; clast lithologies are mostly phyllite with little sandstone and siltstone with calcite-sand cement coatings. Sand as above.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
390	Basin Fill	70	25	5	GP	5YR 6/3	M	Light reddish brown gravel with sand. Gravel clasts are = 2 cm in diameter, grading to coarse sand; composed of phyllite and quartz derived from Pinal Schist, have calcite-sand cement coatings, and are equidimensional to tabular in shape. Sand as above.
400		70	25	5	GP	5YR 6/3	M	Light reddish brown gravel with sand, as above but with increased quartzite and fine-grained arkosic sandstone (possibly derived from Morita Formation) clasts; Pinal Schist continues to be the dominant clast lithology.
410		15	80	5	SW	5YR 6/3	W	Light reddish brown sand with gravel. Gravel is composed of clasts =1 cm in diameter, grading to coarse-grained sand; angular to subrounded, mostly phyllite with little sandstone and siltstone. Sand is coarse to fine-grained, well-graded, subangular to subrounded quartz and phyllite lithic grains.
420		5	90	5	SW	5YR 6/3	W	Light reddish brown sand. Sand is moderately well-graded, coarse to fine-grained, but mostly medium to fine-grained. Grains are subangular to subrounded quartz and phyllite lithic grains. Gravel is made up of =1 cm diameter phyllite clasts, few with calcite-sand cement coatings. HCl reaction is confined to cement.
430		5	90	5	SW	5YR 6/3 - 5YR 5/2	M	Light reddish brown to reddish gray sand. As above but sand is well-graded with more coarse sand. Gravel as above. Finer sand is light reddish brown; coarser is reddish gray.
440		15	80	5	SW	5YR 6/3	M	Light reddish brown sand with gravel. Sand is as above, with larger gravel fraction. Gravel clasts are up to 2 cm, angular to subrounded, composed mostly of phyllite with little fine-grained sandstone; calcite-sand cement coatings on some clasts.
450		25	70	5	SW	5YR 6/3-5/2	M	Light reddish brown to reddish gray sand with gravel, as above with larger gravel fraction.
460		25	70	5	SW	5YR 6/3	M	Light reddish brown sand with gravel, as above.
470		20	75	5	SW	5YR 6/3	M	Light reddish brown sand with gravel, as above; slight increase in the relative amount of sandstone and siltstone clasts, but Pinal Schist phyllite remains the dominate clast lithology.
480		25	70	5	SW	5YR 6/3	M	Light reddish brown sand with gravel. Gravel is composed of approximately 60% phyllite and 40% clastic sedimentary rocks (sandstone, siltstone, arkosic sandstone). Sand fraction is fine to coarse-grained with abundant lithic grains. Gravel and sand clasts are angular to subrounded; few calcite-fine sand cement coatings.
490		tr	90	10	SW	2.5YR 6/2	M	Pale red sand. Sand is coarse to fine-grained; fine sand is composed of quartz grains; medium sand is comprised of quartz sandstone and little phyllite lithic grains; coarse sand is mostly sandstone with little phyllite lithic grains.
495	**Morita Formation**				bedrock	2.5YR 8/1	W	White fine-grained quartz sandstone. Sandstone is composed of clear quartz grains with few gray opaques with white calcite cement. Few chips of reddish brown siltstone and fine-grained sandstone are present in the sample as well. Morita Formation.

		GR	**SA**	**FI**				
500	Morita Formation					5YR 8/2,	W	Pinkish white, light gray, to gray fine-grained quartz sandstone; white calcite cement. Morita Formation.
						7/1 to 6/1		
510						2.5YR 5/3	W	Reddish brown fine-grained sandstone and siltstone. Some white sandstone and phyllite in sample, probably washing down from the basin fill. Phyllite is probably fall down from basin fill above. Some difficulty in picking up the cuttings with the reverse circulation method of drilling at this depth.
520						2.5YR5/1	W	Reddish gray, weak red, to reddish brown siltstone and fine-grained sandstone. Sample has some phyllite and quartz contaminants from basin fill above Morita Formation contact.
						to 5/3		
525						2.5YR 6/2	W	Pale red quartz sandstone. Less basin fill contamination of sample than at 520'.
530						2.5YR 5/2,	M	Weak red siltstone, clay balls, and pale red fine-grained sandstone. Few reduction bleached spots in siltstone; little crystalline calcite in hairline fractures.
						2.5YR 6/2		
540						2.5YR 4/2	W	Weak red siltstone with ~10% white (2.5YR 8/1) sandstone.
550						2.5YR 4/2	W	Weak red siltstone with few scattered white bleached reduction spots. Few gray limestone chips.
560						2.5YR 4/2	W	Weak red siltstone with few white reduction spots.
570						2.5YR 4/3	M	Reddish brown silty sandstone, fine-grained, moderately well-sorted quartz sandstone with carbonate cement. Moderate reaction to HCl.
580						2.5YR 4/3	M	Reddish brown silty sandstone, as above; the sample also contains a trace amount of limestone chips up to 1/4" in diameter.
590						2.5YR 4/3	M	Reddish brown fine-grained, silty quartz sandstone, with few 1 mm calcite nodules.
600						2.5YR 4/3	M	Reddish brown silty, fine-grained quartz sandstone. One slickenside surface noted.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
610	Morita Formation					2.5YR 5/3	M	Reddish brown crushed claystone and sandstone. Claystone is approximately 70% of the sample, with soft, moderately plastic, sticky, cohesive clay. Sandstone is fine-grained, fairly hard, with calcareous cement. Moderate reaction to HCl.
620						2.5YR 4/3	M	Reddish brown silty sandstone, limestone, and clay. Sandstone is as described above. Clay and limestone each comprise approximately 10% of the sample.
630						2.5YR 5/4	M	Reddish brown silty sandstone, very fine-grained, with carbonate cement. As above except that chips are slightly platy, fairly hard. Moderate reaction to HCl.
640						2.5YR 4/3	M	Reddish brown sandstone, mix of medium to fine grained sandstone, calcareous cement, hard; few pieces of quartzite. Moderate reaction to HCl.
650						2.5YR 6/2	M	Pale red arkosic sandstone and clay. Sandstone is medium to fine-grained, well-indurated, composed of quartz with 10% feldspar, few opaques and few reddish brown siltstone lithic grains with calcareous cement. Sample also contains approximately 10% soft clay that is moderately plastic, sticky, cohesive. Moderate reaction to HCl.
660						2.5YR 5/2	W-M	Weak red feldspathic sandstone. Sandstone is medium to fine-grained, carbonate cemented, hard; coloration of individual chips vary from dark through light grays of various hues. Weak to moderate reaction to HCl.
670						2.5YR 4/2	W	Weak red siltstone and fine-grained sandy siltstone. Siltstone is hard, very slightly laminated, calcareous. Few 1mm white calcite veinlets. Weak reaction to HCl.
680						2.5YR 4/3	M	Reddish brown clayey siltstone, sandstone with some clay. Siltstone is fairly hard, weakly laminated, with carbonate cement. Sandstone is fine to very fine-grained, hard, with carbonate cement. Small amount of clay (= 5%), is soft, sticky. Moderate reaction to HCl.
690						2.5YR 4/3	M	Reddish brown sandstone, medium to fine-grained, hard, carbonate cement; few small bleached spots. Some white quartzite and quartz grains, small amount of clay (= 2%). Moderate reaction to HCl.
700						2.5YR 4/3	M	Reddish brown sandy siltstone. Sand grains are fine to very fine- grained, well-indurated, with carbonate cement; slightly platy. Moderate reaction to HCl.
710						2.5YR 4/4	M	Reddish brown claystone, silty claystone, and fine-grained silty sandstone, and clay. Claystone fraction is moderately soft, slightly laminated, with calcareous cement. Silty sandstone is fine to very fine-grained, moderately hard, with calcareous cement. Clay is very soft, sticky, moderately plastic. Moderate reaction with HCl.
720						2.5YR 7/2, 2.5YR 8/2	M	Pale red to pinkish white sandstone, medium-grained, composed primarily of quartz sand with a few % feldspar; carbonate cement, moderately hard, clean (no silt). Moderate reaction to HCl.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
730	Morita Formation					2.5YR 7/2	M	Pale red sandstone, as above except that drilling action has disintegrated much of the sandstone to a beach sand consistency, indicating less induration; weak laminations. Trace disseminated limonite after fine pyrite. Moderate reaction to HCl.
738						2.5YR 4/3	M	Reddish brown silty sandstone, claystone, clay mix. Claystone is fairly soft, easily broken, calcareous, weakly laminated, platy. Clay fraction is soft plastic, sticky, moderate reaction to HCl.
740						2.5YR 4/3	M	Reddish brown calcareous mudstone. Material is fairly soft, easily broken, weakly laminated, platy. Moderate reaction to HCl.
744						2.5YR 4/3	M	Reddish brown sandstone, fine to very fine-grained, carbonate cement, moderately hard, slightly platy, Moderate reaction to HCl.
750						2.5YR 4/3	M	Reddish brown silty, slightly clayey sandstone, fine to very fine-grained; carbonate cement, moderately hard, slightly platy. Moderate reaction to HCl.
760						2.5YR 5/2	M	Weak red silty sandstone. Fine-grained, carbonate cement, hard; few hairline calcite veinlets. Moderate reaction to HCl.
770						2.5YR 5/2, 10R 5/2	M	Weak red sandstone and silty sandstone. Sandstone is fine-grained, with carbonate cement, hard. Moderate reaction to HCl.
780						2.5YR 5/3	M	Reddish brown calcareous siltstone, moderately soft, platy, weakly laminated, some fine-grained sand. Moderate reaction to HCl.
790						2.5YR 5/3	M	Reddish brown sandy siltstone. Sand is fine-grained, carbonate cement, fairly hard; moderate reaction to HCl.
800						2.5YR 6/1	M	Reddish gray sandstone. Composed of medium to fine-grained primarily quartz grains with a few % feldspar grains, <1% very fine-grained black opaques, and limonite after pyrite; carbonate cement; hard. Moderate reaction to HCl.
810						2.5YR 4/3	S	Reddish brown sandy siltstone. Sand where present in the siltstone is fine-grained. Siltstone is moderately hard, with calcareous cement. Strong reaction to HCl.
820						2.5YR 5/4	W-M	Reddish brown mix of clay, claystone, and siltstone. Clay fraction is about 30%, very soft, moderately plastic, cohesive, sticky. Claystone is moderately soft, platy, very weakly laminated. Moderate reaction to HCl.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
830	Morita Formation					2.5YR 5/1	W-M	Reddish gray siltstone with a small amount of limestone.
840						2.5YR 4/3	M	Reddish brown siltstone with small amount of very fine-grained sandstone, fairly hard, carbonate cement, some white calcite in fractures. Moderate reaction to HCl.
850						2.5YR 4/3	WM	Reddish brown sandy siltstone and sandstone, fairly hard, carbonate cemented. Sandstone is fine-grained, primarily a quartz sandstone with carbonate cement, hard. Contact between siltstone and sandstone is visible in larger chips. Overall moderate reaction to HCl.
						7.5YR 6/1		
860						2.5YR 4/2	WM	Weak red silty clay and claystone. Clay is soft, slightly plastic, cohesive, sticky. Moderate reaction to HCl.
870						2.5YR 4/3	S	Reddish brown claystone, soft, slightly platy, carbonate cement, strong reaction to HCl.
880						2.5YR 7/1	M	Light reddish gray sandstone; fine to medium-grained; primarily quartz with 10% feldspar and =1% speckling of black grains, carbonate cement, fairly hard, moderate reaction to HCl.
890						2.5YR 7/1	M	Light reddish gray sandstone and siltstone mix. Sandstone is as described above; siltstone is reddish brown, platy, slightly laminated, fairly soft, with carbonate cement. Reacts moderately with HCl.
						2.5YR 4/3	M	
900						2.5YR 7/1	W-M	80% light reddish gray fine-grained arkosic sandstone with 20% reddish brown siltstone, as above.
						2.5YR 4/3		
910						2.5YR 4/3	M	Reddish brown sandy siltstone. Sand is very fine-grained, carbonate cement, slightly platy, fairly hard. Moderate reaction to HCl.
920						2.5YR 7/1	M	Light reddish gray arkosic fine-grained sandstone with 25% reddish brown silty sandstone. Sand grains are primarily quartz with some rust colored staining on surfaces. Carbonate cement, fairly hard, moderate reaction to HCl.
						2.5 YR 5/3		
930						2.5YR 7/1	M	Light reddish gray arkosic sandstone. Sand grains are primarily quartz with some rust colored staining on surfaces, carbonate cement, hard. Moderate reaction to HCl.
940						2.5YR 5/2	S	Weak red silty sandstone, sand is fine to very fine-grained, fairly hard, carbonate cemented, strong reaction to HCl.

Project Name: **Bisbee Mitigation Order**							Boring No.: **BMO-2008-8M**	
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
950	Morita Formation					2.5YR 5/2	M	Weak red arkosic sandstone, medium to very fine-grained, hard, carbonate cement. Moderate reaction to HCl. Few calcite fracture fillings.
960						2.5YR 7/1	M	Light reddish gray arkosic sandstone. Sandstone is medium grained, composed primarily of quartz with a few % feldspar, few reddish brown siltstone lithic grains, and few black opaque grains. Some grains exhibit rust colored staining. Few chips have calcite fracture coatings, moderate reaction to HCl.
970						2.5YR 7/1	M	As above
980						2.5YR 7/1	M	As above, very consistent, identical in appearance.
990						2.5YR 4/3	M	Reddish brown clay and claystone with some sandy siltstone. Clay fraction is about 30%, very soft, moderately plastic, sticky, cohesive. Claystone is soft, very slightly laminated, platy. Silty sandstone is very fine-grained, fairly hard, with carbonate cement. Reaction to HCl is moderate.
1000						2.5YR 4/3	M	Reddish brown clay and claystone, as described above, except that clay fraction has increased to about 40% of total sample.
1010						25 YR 7/2	M	Pale red sandstone. Medium to fine-grained quartz with a few % feldspar; carbonate cement, hard. Moderate reaction to HCl
1020						2.5 YR 6/2	M	Pale red sandstone, as above with about 30% reddish brown siltstone.
						2.5YR 4/3	M	Fairly soft, slightly platy, carbonate cement. Moderate reaction to HCl.
1030						2.5YR 6/3	M	Light reddish brown arkosic sandstone, medium to fine-grained, primarily quartz with 10% feldspar and up to 1% opaque grains, carbonate cement, fairly hard, moderate reaction to HCl.
1040						2.5YR 6/3	M	Light reddish brown, arkosic sandstone, as above.
1050						2.5YR 6/3	M	As above; with fine white calcite veinlets and limonite stain on few fractures.
1060						2.5YR 4/3	M	Reddish brown clay and claystone. Clay fraction is about 40% of sample. Soft, moderately plastic, cohesive, sticky; claystone is fairly soft, platy, very slightly laminated; reaction to HCl is moderate.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
1070	Morita Formation					2.5YR 4/3	M	Reddish brown clay and claystone with small amount of limestone and trace sandstone. Claystone is fairly soft, platy, very slightly laminated, calcareous. Clay fraction comprises about 30% of sample; is soft, plastic, sticky, cohesive. Sandstone is medium to fine-grained, composed primarily of quartz with carbonate cement. Moderate reaction to HCl.
1080						2.5YR 4/3	M	Reddish brown claystone and siltstone with clay. Claystone and clay fractions are as described above except that clay comprises about 20% of the sample. Siltstone is moderately soft, slightly platy, contains some very fine-grained sand. Reacts moderately to HCl.
1090						2.5YR 4/3	M	Reddish brown siltstone and claystone, as above.
1100						2.5YR 6/3	M	Light reddish brown feldspathic sandstone. Sandstone is fine-grained, with calcareous cement, hard, composed primarily of quartz with approximately 10% feldspar and <1% black opaques. Moderate reaction to HCl.
1110						2.5YR 6/3	M	Light reddish brown feldspathic sandstone, as above.
1120						2.5YR 6/3	M	Light reddish brown feldspathic sandstone, as above.
1130						2.5YR 4/4	S	Reddish brown clay and claystone. Clay makes up about 40-50% of total sample, is soft, moderately plastic, cohesive. Claystone is slightly platy, moderately soft. Strong reaction to HCl.
1140						2.5YR 4/4	S	Reddish brown mudstone. Similar to above except that non-indurated clay content is only about 5% of sample. Mudstone is moderately well indurated, calcareous, composed of clay, silt and small amount of fine-grained sand. Strong reaction to HCl.
1150						2.5YR 6/3	M	Light reddish brown fine-grained arkose; composed of quartz, feldspar, and mudstone lithic grains in calcareous cement; hard. Moderate reaction to HCl.
1160						2.5YR 6/3	M	Light reddish brown fine-grained arkose, as above. Moderate reaction to HCl.
1170						2.5YR 6/3	M	Light reddish brown arkose and silty claystone. Arkose is as described above; silty claystone is approximately = 10% of sample; and is platy, soft, calcareous. Moderate reaction to HCl.
1180						2.5YR 4/3	M	Reddish brown claystone, silty claystone and clay. Claystone is soft platy, very slightly laminated. Calcareous silty claystone is fairly hard but can be broken by hand, calcareous cement. Clay fraction make up about 5-10% of total sample, is very soft, moderately plastic, cohesive, sticky, calcareous. Different lithologies in the sample may occur as thin interbeds. Reaction to HCl is moderate.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-8M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
1190	Morita Formation					2.5YR 4/5	M	Red clay, claystone, silty claystone and sandstone. Clay is soft, moderate plastic, calcareous; claystone/silty claystone is poorly indurated, soft, moderate reaction to HCl.
1200						2.5YR 4/5	M	Reddish brown mudstone. Fairly soft, slightly platy, calcareous, moderate reaction to HCl, saturated.
1210						2.5YR 6/3	M	Reddish brown arkosic sandstone; fine-grained, hard, calcareous cement, quartz grains, numerous opaques and some feldspar grains; moderate reaction to HCl, saturated conditions.
1220						2.5YR 6/3	M	Reddish brown arkosic sandstone; fine-grained, hard, calcareous cement, quartz grains, numerous opaques and some feldspar grains; moderate reaction to HCl, saturated conditions. TD = 1220 ft bls at 11:30 on 10/20/2008

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
1	Basin Fill	15	25	60	ML	2.5YR 5/6	N	Red sandy silt with gravel. Gravel clasts are up to 3" in diameter; subangular to well rounded, assortment of volcanics, light colored silicified limestone, chert; manganese oxide stain on surfaces of some clasts. Sand fraction is fine to very fine-grained, loose powdery, dry. No reaction to HCL.
10		40	40	20	SM	2.5YR 6/4	S	Light reddish brown silty sand with gravel. Gravel clasts up to 1/2"diameter, angular to rounded; primarily gray through white limestones, quartz, red fine-grained sandstone, few volcanics, some fragments of caliche. Sand fraction is coarse through very fine-grained, fairly well-graded through to silt fraction, loose dry mix, very strong reaction to HCL.
20		25	45	30	SM	2.5YR 6/4	M	Reddish brown silty sand with gravel. Gravel clasts up to 2" max diameter, angular to rounded, primarily pieces of a dark gray schist, dark through light gray limestones, quartz, chert, reddish fine-grained sandstone. Sand fraction is primarily medium through very fine-grained, loose dry mix; moderate reaction to HCL.
30		20	20	60	ML	2.5YR 5/4	S	Reddish brown sandy silt with gravel. Gravel and sand fractions as above; silt fraction has increased considerably, dry flour like texture, very strong reaction to HCL.
40		60	20	20	GM	2.5YR 6/4	S	Light reddish brown silty gravel. Gravel clasts up to 2" maximum diameter, subangular to rounded, clasts are coated with calcium carbonate, composed primarily of schists with some quartz, limestone, chert with strong caliche cement. Sand fraction is coarse though very fine-grained; loose mix, dry, strong reaction to HCL.
50		20	15	65	ML	2.5YR 6/3	S	Light reddish brown gravelly silt with sand caliche. Gravel and sand fractions as described above. Cemented together as a caliche, dry very strong reaction to HCL.
60		35	15	50	ML	2.5YR 6/3	S	Light reddish brown gravelly silt with sand. As above, except for increase in gravel fraction.
70		55	15	30	GM	2.5YR 6/3	S	Light reddish brown clayey silty gravel with sand, gravel clasts up to 2" max. diameter, subangular to rounded, mix of gray schists, limestone, quartz, and red fine-grained sandstone, medium-grained sandstone, quartz. Considerable amount of carbonate coatings on clasts. Sand fraction is coarse through fine-grained; fines are as clayey silt, that are very sticky and moderately plastic when wet; strong reaction to HCL.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-9M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
80	Basin Fill	55	20	25	GM	2.5YR 6/3	S	Light reddish brown clayey, silty gravel with sand. As above except that fines fraction has decreased slightly.
90		60	25	15	GM	2.5YR 6/3	S	Light reddish brown silty gravel with sand. Gravel clasts are fine, up to 1/2 inch max. diameter. Subangular to fairly well rounded, composed primarily of schist, quartz, some limestone, fine-grained sandstone; loose mix, dry, very strong reaction to HCL.
100		15	35	50	ML	2.5YR 5/3	S	Reddish brown silt with gravel and sand. Gravel as described above. Sand fraction is primarily fine to very fine-grained; fines are as a calcareous silt. Dry powdery fine texture; very strong reaction to HCl.
110		70	15	15	GM	2.5YR 5/3	S	Reddish brown silty gravel. Gravel clasts to 2" max. diameter, sub-angular to rounded, composed of primarily fine-grained, calcareous cemented sandstone, reddish brown, light pale green limestone, and few schists. Sand fraction is coarse through very fine-grained; fines are as a calcareous silt; very strong reaction to HCl.
120		15	10	75	ML	2.5YR 4/3	S	Reddish brown silt with sand and gravel. Gravel fraction contains numerous reddish brown very fine-grained sandstones up to 1" diameter. Sand fraction is minor, fine-to very fine-grained; fines are a very soft silt. May contain small percentage of clay. Dry, very strong reaction to HCl.
130	Morita Formation				Bedrock	2.5YR 5/2		Reddish brown, very fine-grained silty sandstone and siltstone; dry, strong reaction to HCl. Bedrock; Morita Formation.
140						2.5YR 5/3	S	Reddish brown, slightly laminated, moderately indurated claystone. Slightly damp, very strong reaction to HCl. Morita Formation.
150						2.5YR 5/3	S	Reddish brown, very fine-grained silty arkosic sandstone with highly indurated siltstone, calcareous cement. Dry, very strong reaction to HCl. Morita Formation.
160						2.5YR 5/3	S	Reddish brown clayey and silty fine-grained sandstone and hard calcareous siltstone. Hairline calcite veinlets; dry. Very strong reaction to HCl. Morita Formation.
170						2.5YR 5/3	S	Reddish brown calcareous mudstone. Locally soft and poorly indurated. Dry, very strong reaction to HCl. Morita Formation.
180						2.5YR 5/3	S	Reddish brown, very fine-grained sandstone, siltstone and mudstone, all fairly hard, calcareous. Dry, very strong reaction to HCl. Morita Formation.
190						2.5YR 5/3	S	Reddish brown very fine-grained sandstone and mudstone. As above.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-9M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
200	Morita Formation					7.5YR 8/2	S	Pinkish white, medium to fine-grained quartz sandstone with calcareous cement, hard. <1% dark opaques; trace very fine-grained disseminated oxidized pyrite. Very strong reaction to HCl. Morita Formation.
210						7.5YR 7/2	S	Pinkish gray sandstone. Medium to fine-grained, calcareous cement, moderately hard; very small amount of light gray and reddish brown claystone; soft, dry, strong reaction to HCl. Morita Formation.
220						2.5YR 6/2	S	Pale red silt with trace sand, soft flour like texture, calcareous; some coarse to very fine-grained sand, probably ground up during drilling; dry, very strong reaction to HCl. Morita Formation.
230						7.5YR 7/2	S	Pinkish gray sandstone, sample is almost entirely a pinkish gray medium to fine-grained, calcareous cemented, quartz sandstone; few pieces of a reddish brown mudstone; dry, very strong reaction to HCl. Morita Formation.
240						2.5YR 6/3	S	Light reddish brown, fine-grained sandstone, calcareous cement; few pieces of a white colored fine-grained, quartz sandstone with siliceous cement; sample has been ground up during drilling process. Dry, strong reaction to HCl. Morita Formation.
250						2.5YR 5/3	M	Reddish brown mudstone. Soft, poorly indurated, very slightly laminated, few bleached spots. Dry, moderate reaction to HCl. Morita Formation.
260						2.5YR 5/2	S	Weak red calcareous claystone, moderately indurated.
270						2.5YR 6/2	S	Pale red sandstone, fine-grained, hard, calcareous cement; and 10% reddish brown siltstone as above; dry, strong reaction to HCl. Morita Formation.
280						10YR 5/2	S	Weak red calcareous siltstone and very fine grained sandy siltstone.
290						10YR 5/2	M	Weak red very fine-grained calcareous silty sandstone. Very dry; drillers are injecting some water to keep dust from the cyclone down. Morita Formation.
300						10YR 5/2	M	Weak red fine-grained calcareous silty and slightly clayey sandstone, with few % gray limestone. Morita Formation.
305								First water at a 305 ft bls. Cyclone is blowing at about 15 gpm.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-9M**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
310	Morita Formation					2.5YR 4/3	S	Reddish brown siltstone, fairly well indurated, very weakly laminated, calcareous cement, with 1% gray limestone. Moderate to strong reaction to HCl. Morita Formation.
320							S	Reddish brown siltstone, fairly well indurated, very weakly laminated, calcareous cement, strong reaction to HCl. Morita Formation.
330						2.5YR 5/2	S	Weak red mudstone, weakly laminated, platy, moderately indurated, , strong reaction to HCl. Morita Formation.
340						2.5YR 4/2 7.5YR 6/1	S	Weak red sandstone. Very fine-grained, calcareous cement; some gray fine-grained sandstone also present. Strong reaction to HCl. Morita Formation.
350						2.5YR 4/2	M	Weak red mudstone and claystone. Platy, very slightly laminated, fairly soft, can be broken by hand, weak to moderate reaction to HCl. Morita Formation.
360						2.5YR 4/2	W	Weak red sandstone, very fine-grained, siliceous cement. Fairly hard, slightly platy; few white reduction spots. Very weak reaction to HCl. Morita Formation
370						2.5YR 6/1	W	Reddish gray sandstone, fine-grained quartz sandstone, siliceous cement, 1% high luster dark gray opaque grains, <1% limonite and hematite flecks; hard, homogenous, very weak reaction to HCl. Morita Formation.
380						2.5YR 4/2	M	Weak red siltstone, weakly laminated, platy. Fairly well indurated, moderate reaction to HCl. Morita Formation.
390						10R 4/2	W	Weak red fine-grained sandy mudstone. Morita Formation.
400						2.5YR 4/2	M	Weak red feldspathic silty sandstone, fine-grained, calcareous cement, platy chips, moderately soft, can easily be broken with fingers. Grains are quartz with 10% feldspar, 1% metallic gray opaques. Moderate reaction to HCl. Morita Formation.
410						2.5YR 7/2	M	Pale red sandstone, fine-to medium grained, primarily quartz, calcareous cement; hard, drilling as large 1" chips, some rust colored staining on surface of some chips, moderate reaction to HCl. Morita Formation.
420								Pale red sandstone, as above, with 1 % disseminated limonite and , 1% disseminated metallic opaques.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-9M**

		GR	**SA**	**FI**				
430	Morita Formation					2.5YR 7/2	M	Pale red medium-grained feldspathic sandstone with 1% disseminated limonite.
440						2.5YR 5/2 and 7.5YR 4/3	S	Weak red calcareous cemented mudstone and silty sandstone and 20% light reddish gray quartz sandstone, calcareous cement, fine-grained, fairly hard, very strong reaction to HCl. Few light gray reduction spots. Morita Formation.
450						2.5YR 4/2	W	Weak red mudstone, platy. Weakly laminated, moderately indurated, easily scratched but difficult to break in hand, weak reaction to HCl. Morita Formation.
460						2.5YR 4/2	W	Weak red mudstone, as above, with small amount (10%) of light reddish gray fine-grained quartz sandstone. Morita Formation.
470						2.5YR 4/2	M	Weak red sandstone, fine-grained, locally clayey and silty, calcareous cement, few calcite fracture fillings; no laminations observed, moderately hard, moderate reaction to HCl. Morita Formation.
480						2.5YR 6/2	M	Pale red sandstone, fine-grained. Primarily quartz, calcareous cement hard some rust stain, and few gray opaque grains. Small amount of reddish brown siltstone (<10%); moderate reaction to HCl.
490						2.5YR 6/2		Pale red sandstone, as above. 1% very fine disseminated limonite and < 1% dark fine-grained opaques.
500						2.5YR 5/2	M	Weak red siltstone, calcareous; fairly well indurated, small amount of gray limestone (<5%) saturated, moderate reaction to HCl.
510						2.5YR 5/2	M	Weak red silty sandstone, very fine-grained, calcareous cement, moderately hard, calcite filled fractures; some very light greenish gray sandstone (10%), saturated, strong reaction to HCl.
520						2.5YR 4/2	M	Weak red very fine-grained silty sandstone, as above. Few calcite veinlets.
530						2.5YR 4/2	M	Weak red calcareous mudstone.
540						2.5YR 4/2	S	Weak red fine-grained sandy arkosic mudstone. Trace amount of light brown clay that is soft, cohesive, sticky, and slightly plastic. Strong reaction to HCl.

550	Morita Formation					2.5YR 6/2	M	Pale red fine-grained quartz sandstone, with few % feldspar grains and disseminated limonite stain on quartz grain surfaces; moderately hard. Moderate reaction to HCl.
560						2.5YR 6/2	W/M	Pale red fine-grained sandstone, as above.
570						2.5YR 4/2	W/M	Weak red siltstone, calcareous, well-indurated, small amount of mudstone, few bleached spots. Moderate reaction to HCl.
580						2.5YR 5/2	M	Weak red sandstone, fine-grained, calcareous cement; primarily quartz with few % feldspar and dark colored mafic grains. Considerable rust colored limonite staining on grain surfaces, hard. Moderate reaction to HCl.
590						2.5YR 4/2	M	Weak red mudstone, platy, weakly laminated, moderately indurated but can easily be broke with fingers; small amount of clay (<5%) that is very soft, sticky, cohesive, plastic. Moderate reaction to HCl.
600						2.5YR 4/4	M	Reddish brown claystone with 20% clay. Claystone is finely broken up, indurated, platy. Clay is soft, sticky, cohesive, plastic; fragments of gray limestone are mixed in with the clay. Moderate reaction to HCl.
610						2.5YR 4/2	S	Weak red siltstone, fairly soft, can easily be broken with fingers, platy, poorly laminated, calcareous, rare light gray bleached patches. Strong reaction to HCl.
620						2.5YR 4/2	S	Weak red siltstone, as above.
630						2.5YR 4/2	S	Weak red siltstone, as above.
640						2.5YR 4/2	W	Weak red siltstone, as above; less calcareous.
641						2.5YR 5/4	M	Reddish brown clay, very soft, strongly cohesive, plastic, calcareous, moderate reaction to HCl (but is about 1' thick).
642						2.5YR 5/2	S	Weak red sandstone, fine-grained, calcareous, cementation primarily quartz with numerous dark mafic grains, considerable rust colored staining, fairly hard, strong reaction to HCl.

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
10	Basin Fill	15	60	25	SM	5 YR 5/6	S	Yellowish red silty sand with gravel, cemented with caliche. Sand is mostly fine to very fine-grained with few medium and coarse grains; is mostly subrounded; composed primarily of quartz, ground caliche and lesser amount of lithic grains. Gravel clasts are subangular limestone and quartzite pebbles; sample contains gravel-sized angular chunks of caliche generated by drilling.
20		35	40	25	SM	5 YR 4/6	S	Yellowish red silty sand with gravel, cemented with caliche. Gravel clasts are mostly Pinal Schist phyllite with a little gray limestone. Sand is coarse to fine-grained composed of lithic grains, quartz, and ground up (by drilling) silty caliche. Gravel clasts are mostly angular to subangular pebbles < 1 cm in diameter.
30		30	50	20	SM	5 YR 6/3	S	Light reddish brown silty sand with gravel, strongly cemented with caliche. Finer sand and silt sized particles are mostly ground up caliche generated during drilling. Gravel-sized material includes limestone, chert, phyllite, quartzite, jasperoid, red siltstone pebbles, and caliche chunks. Sand is fine to coarse-grained subangular to subrounded quartz and lithic grains.
40		65	30	5	GP	5 YR 7/3	S	Pink gravel with sand. Polymictic gravel is composed of angular to subrounded limestone, sandstones, chert, quartz, and red siltstone pebbles up to 2 cm in diameter; few angular chunks of caliche broken up during drilling, and little quartz. Fines are caliche and clay.
50		5	20	75	CL	2.5YR 6/3	S	Light reddish brown calcareous clay with sand. Some silt and trace gravel also present. Gravel lithology as above. Sand is made up of fine-grained lithic grains and quartz. Sticky, cohesive, sandy, clayey caliche.
60		5	15	80	CL	2.5YR 5/4	S	Reddish brown clay with caliche. Sticky, cohesive, calcareous clay. Sand particles are mostly fine-grained with few medium to coarse lithic grains and quartz. Clay swells with water. Few gravel clasts include red siltstone, reddish brown sandstone; very fine-grained quartz sandstone; gray limestone, black and white silicified limestone, green arkosic sandstone, and few hard caliche chips generated by drilling.
70		5	15	80	CL	2.5YR 6/4	S	Light reddish brown clay with caliche. As above, with few more hard caliche chips. Gravel as above, mostly as fine pebbles.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-10GL**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
80	Basin Fill	30	45	25	SM	2.5YR 7/3	S	Light reddish brown silty sand with gravel. Little clay in fine fraction. Gravel is fine, grading to coarse sand, composed of phyllite and metamorphic quartz derived from Pinal Schist, reddish brown, tan, white and green fine-grained sandstone, and a little light gray limestone. Sand is mostly lithic grains of same composition. Fines are calcareous silt with little clay.
90		15	10	75	ML	2.5YR 6/4	S	Light reddish brown silt with gravel. Calcareous silt with a little clay. Sand is fine to coarse lithic grains. Gravel is polymictic composed of lithologies listed above.
100		20	20	60	ML	2.5YR 5/4	S	Reddish brown sandy silt with gravel. Gravel and sand are mostly phyllite derived from Pinal Schist with few caliche chunks. Clasts are broken angular to subrounded, up to 2 cm diameter. Interpreted to be weathered top of Glance Conglomerate.
110	Glance Conglomerate				bedrock	2.5YR 6/4	W	Reddish brown conglomerate. Phyllite and quartz clasts derived from the Pinal Schist; angular to subrounded pebbles in silty sand, moderately well indurated matrix. Glance Conglomerate.
120						2.5YR 4/4	N	Reddish brown claystone with shaley partings; locally small < 1 mm white spots, some with tiny cubic pyrite in center. Claystone layer in Glance Conglomerate.
124						10 R 5/3	W	Weak red siltstone to sandy mudstone. Few cream colored = 2mm reduction spots and bleaching along micro fractures. One slickenside surface. Mudstone layer in the Glance Conglomerate.
130						10 R 5/2 10 R 6/2	W	Weak red to pale red conglomerate. Pinal Schist phyllite, quartz, quartzite, and reddish brown sandy siltstone. The sandy siltstone is as above, and is matrix material to the pebble clasts. One slickenside surface on siltstone cutting. Glance Conglomerate.
140						2.5YR 6/3	W	Light reddish brown conglomerate. Pinal Schist phyllite and quartz clasts up to 1 cm in sandy silt mixture. Some what soft matrix material is friable, falling apart during drilling. Fines locally reactive to HCl. Glance Conglomerate.
150						2.5YR 5/3	N	Reddish brown sandy siltstone. Well indurated; uniform color. Non-calcareous, but one calcite microfracture noted. Silty layer in Glance Conglomerate.
160						2.5YR 5/3	N	Reddish brown silty sandstone, poorly sorted, with few fine gravel sized clasts of quartz and phyllite (Pinal Schist). Sand grains are quartz and small phyllite lithic grains. Silty sandstone layer in Glance Conglomerate.
170						2.5YR 5/6	W	Red sandy siltstone. Sand grains are quartz with fewer phyllite lithic grains.
180						2.5YR 6/3	N	Light reddish brown conglomerate; Glance Conglomerate. Phyllite and metamorphic quartz clasts are angular to subangular, in a reddish brown silty sand matrix. Matrix material is adhered to phyllite and quartz clasts. Gravel clasts are up to 2 inches.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
190	Glance Conglomerate					2.5YR 5/3	W	Reddish brown conglomerate. As above; abundant sand-size quartz and phyllite grains as well as fine gravel-size clasts. Glance Conglomerate.
200						2.5YR 5/4	W	Reddish brown Glance Conglomerate. As above. Very weak HCl reaction only in fines of the matrix.
210						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Pinal Schist-derived, angular to subangular, lensoidal shaped pebble clasts in a silty, friable matrix.
220						2.5YR 4/6	W	Red broken up clayey arkosic siltstone. Siltstone contains scattered fine to medium-grained quartz and phyllite lithic sand grains. Few tiny = .5 mm white reduction spots. HCl reaction in fines only. Siltstone bed in the Glance Conglomerate.
230						2.5YR 4/6	N	Red sandy, clayey siltstone. Scattered yellowish =3 mm reduction spots. Few fine black oxide spots. Siltstone bed in the Glance Conglomerate. Dry.
240						2.5YR 5/4	N	Reddish brown clay, silt and sand with 10% lithified chips of reddish brown clayey siltstone with few reduction spots. Sticky, cohesive, soft. Possible fault gouge, Glance Conglomerate. Dry, despite intercepting water at 225 ft bls in BMO-10GU.
250						2.5YR 6/3	N	Light reddish brown Glance Conglomerate. Angular to subrounded Pinal Schist pebbles =1 cm in diameter in sandy silty matrix. Loose, friable. Dry.
260						2.5YR 5/3	W	Reddish brown silty fine-grained sandstone. HCl reacts only with the fines. Sandstone bed in the Glance Conglomerate. Dry.
270						2.5YR 6/4	N	Light reddish brown conglomerate. Pinal Schist gravel and sand conglomerate clasts and reddish brown silty sandstone as above, with loose reddish brown sand, silt and clay. Loosely consolidated zone in Glance Conglomerate. Dry.
280						2.5YR 6/4	N	Light reddish brown conglomerate. Angular to subrounded clasts up to 2.5 cm; composed of Pinal Schist material (phyllite and metamorphic quartz) in a silty sand matrix. Glance Conglomerate. Dry.
290						2.5YR 5/4	N	Reddish brown conglomerate. Pinal Schist clasts up to 2.0 cm in clayey, sandy siltstone matrix. Glance Conglomerate. Dry
300						2.5YR 5/4	N	As above; sand, silt, and clay mudstone matrix. Dry.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-10GL**

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
310	Glance Conglomerate					2.5YR 5/4	N	Reddish brown to red Glance Conglomerate Angular to subrounded Pinal Schist clasts up to 1 cm in mudstone (sandy, clayey siltstone) matrix. Dry.
						2.5YR 5/6		
320						2.5YR 6/4	N	Light reddish brown Glance Conglomerate. Angular chunks to subrounded pebbles of up to 2 c. Pinal Schist in silty sandstone matrix. Dry.
330						2.5YR 6/4	W	Light reddish brown Glance Conglomerate. As above with silty sand with little clay matrix, pebbles up to 1 cm. Matrix soft, friable. Dry.
340						2.5YR 6/4	N	Light reddish brown Glance Conglomerate, as above. Wet.
350						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Angular to subrounded Pinal Schist clasts, =1 cm diameter, in mudstone matrix. Wet.
360						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Pinal Schist clasts as above in mudstone matrix. Matrix soft, poorly indurated.
370						2.5YR 6/4	W	Light reddish brown Glance Conglomerate. Angular to subrounded = 1cm pebbles and coarse sand Pinal Schist clasts in soft silty sand with little clay matrix.
380						2.5YR 6/4	W	Light reddish brown Glance Conglomerate, as above. Dry.
390						2.5YR 6/4	W	Light reddish brown Glance Conglomerate. Pinal Schist phyllite and metamorphic quartz clasts (= 1 cm) and a few light greenish gray quartzite clasts in sandy siltstone matrix. Conglomerate is mostly coarse clasts with little matrix material. Formation not making water.
400						2.5YR 6/3	W	Light reddish brown Glance Conglomerate as above; abundant fine gravel and coarse sand-sized Pinal Schist clasts with small amounts of indurated sandy siltstone matrix. Reddish brown color is imparted by matrix material; the Pinal Schist clasts are reddish gray (2.5YR 5/1 to 6/1).
410						2.5 YR 5/2	N	Weak red to light reddish brown Glance Conglomerate. Abundant Pinal Schist clasts mostly = .5 cm with few up to 1 cm, angular to subrounded, in silty sandstone indurated light reddish brown matrix.
						2.5 YR 6/3		
420						2.5YR 5/2	N	Weak red to reddish brown Glance Conglomerate. Abundant Pinal Schist clasts (phyllite and metamorphic quartz) with small amounts of indurated reddish brown sandy siltstone matrix. Pinal Schist clasts are mostly fine gravel (= 1cm) and coarse sand size.
						2.5YR 5/3		

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-10GL**

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
430	Glance Conglomerate					2.5YR 5/2	N	Weak red to reddish brown Glance Conglomerate, as above.
						2.5YR 5/3		
440						2.5 YR 5/3	N	Reddish brown sandy siltstone with few fine gravel to coarse sand size Pinal Schist clasts. Sandy arkosic siltstone bed in the Glance Conglomerate.
450						2.5YR 5/2	W	Light reddish brown to pale red Glance Conglomerate. Abundant = 1 cm Pinal Schist gravel and coarse to medium-grained sand sized clasts in clayey siltstone soft to moderately well indurated matrix. Weak HCl reaction only in matrix.
						2.5YR 5/1		
460						2.5YR 6/4	N	Light reddish brown to pale red Glance Conglomerate. As above but without HCl reactivity. First water, first sample.
						2.5YR 6/2		
470						2.5YR 6/4	N	Light reddish brown Glance Conglomerate. Angular to subrounded Pinal Schist clasts; soft silty clay coatings and balls, and reddish brown sandy siltstone chips. Siltstone chips are probably be matrix of the conglomerate.
480						2.5YR 6/4	N	Light reddish brown Glance Conglomerate. As above. Very little water, not enough to sample.
490						2.5YR 7/4	W	Light reddish brown Glance Conglomerate. Sample is clay and silt coated Pinal Schist gravel clasts (angular to subangular, up to 4 cm) and reddish brown sandy siltstone chips. Sandy siltstone matrix can be occasionally seen adhered to small phyllite clasts.
500						2.5YR 6/4	W	Light reddish brown to pale red Glance Conglomerate. As above, very weak reaction to HCl in fines only. No water.
						2.5YR 6/2		
510						2.5YR 6/3	N	Light reddish brown to weak red Glance Conglomerate. As above, very weak reaction to HCl in fines only.
						2.5YR 5/2		
520						2.5YR 5/1	N	Reddish brown, weak red to reddish gray conglomerate. Sample is mostly = l cm chips of weak red to reddish brown sandy siltstone with lesser Pinal Schist (reddish gray phyllite and white metamorphic quartz) and trace light gray quartzite. Sandy conglomeratic siltstone layer in the Glance Conglomerate.
						2.5YR 5/2		
						2.5YR 5/3		
530						2.5YR 5/2	N	Weak red to pale red Glance Conglomerate. Abundant = 1 cm angular to subrounded lensoidal phyllite (Pinal Schist) conglomerate clasts with 15% sandy siltstone matrix.
						2.5YR 6/2		
540						2.5YR 5/2	N	Weak red to pale red Glance Conglomerate. As above
						2.5YR 6/2		
550						2.5YR 5/1	W	Reddish gray, weak red, to reddish brown Glance Conglomerate. As above. Sandy siltstone matrix occasionally can be seen adhered to Pinal Schist clasts. Trace clear calcite veinlets.
						2.5YR 5/2		
						2.5YR 5/3		

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-10GL**

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
560	Glance Conglomerate					2.5YR 5/3	W	Reddish brown Glance Conglomerate. Pinal Schist clasts up to l cm, with abundant coarse sand size phyllite lithic grains and about 5% white quartz in a sandy, clayey, silty mudstone matrix. Matrix is more clay-rich compared to previous (510' - 550') intervals. HCl reaction restricted to clayey matrix. Formation beginning to make water.
570						2.5YR 6/3	N	Light reddish brown silty sand. Loose fine to coarse sand with few fine gravel clasts consisting of angular to subangular phyllite and quartz grains derived from Pinal Schist. Poorly indurated sandy bed in Glance Conglomerate.
580						2.5YR 5/1 2.5YR 5/2 2.5YR 5/3	N	Reddish gray, weak red, to reddish brown conglomerate composed of e, = 1 cm of phyllite and little quartz (derived from Pinal Schist) in sandy siltstone matrix. Matrix material is moderately well indurated as in 510-550 intervals. Phyllite clasts are reddish gray to weak red; matrix is reddish brown. Glance Conglomerate.
590						2.5YR 6/3 2.5YR 6/2	W	Light reddish brown to pale red Glance Conglomerate. As above but with small amount of slightly calcareous clay. Very little water.
600						2.5YR 5/3	W	Reddish brown Glance Conglomerate. Loose silty sand with gravel composed of quartz, phyllite lithic grains and sandy siltstone particles (matrix of conglomerate). Poorly indurated and/or ground up by the drilling process.
610						2.5YR 5/3	N	Reddish brown Glance Conglomerate. Pinal Schist-derived phyllite and metamorphic quartz, and rare granular quartzite clasts in sandy siltstone matrix. Few chunks = 2 cm of Pinal Schist and matrix material; but most of sample is sand-size particles possibly due to grinding during drilling.
620						2.5YR 5/3	N	Reddish brown Glance Conglomerate. As above. Formation dry again.
630						2.5YR 6/3	N	Light reddish brown Glance Conglomerate. As above; ground up; small coarse sand-size phyllite lithic grains locally seen in sandy siltstone matrix.
640						2.5YR 5/2	N	Weak red Glance Conglomerate. As above, grayer in color; appears to be ground up from drilling.
650						2.5YR 5/2	N	Weak red Glance Conglomerate. As above.
660						2.5YR 5/2 2.5YR 5/3	N	Weak red to reddish brown Glance Conglomerate. Sample contains more gravel-size particles; appears less ground up. Sample is composed of angular to subangular Pinal Schist phyllite and metamorphic quartz pebbles, tabular to lensoidal in shape; with 5% sandy siltstone indurated matrix material.
670						2.5YR 6/3	N	Light reddish brown Glance Conglomerate. As above.

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0	Basin Fill	50	30	20	GM	2.5YR 5/6	S	Red gravel with sand, caliche cement. Gravel clasts are angular to sub-rounded, poorly sorted, composed of yellow silicified limestone, gray micritic, oolitic, and recrystallized limestone; chert, quartzite, reddish gray sandstones, vein quartz, and phyllite. Limestone clasts are most abundant, with lesser phyllite, and smaller amount of clastic sediments. Jarosite and gypsum precipitate from the former evaporation pond are also locally present as a weak cement. Sand fraction is angular to subrounded, coarse to fine-grained, poorly graded quartz and lithic grains.
1		80	15	5	GP	7.5YR 6/4 7.5YR 6/6	S	Light brown to reddish yellow gravel with sand; strong caliche cement. Gravel clasts are angular to subangular, composed of quartz, silicified limestone, fine-grained reddish gray sandstone, quartzite, and phyllite. Phyllite and some quartz is derived from the Pinal Schist; other clasts from Paleozoic and Mesozoic sedimentary formations. Black oxide coatings and jarosite stain are common. Sand grains are angular to subrounded, poorly sorted, coarse to fine-grained, but mostly coarse grained, composed mostly of light brown to reddish yellow lithic grains and quartz.
3		65	20	15	GM	7.5YR 6/3	S	Light brown silty gravel with sand, caliche cement. Gravel is subangular to angular silicified limestone, limestone, chert, phyllite, and milky massive quartz. Caliche chunks are generated by drilling. Sand is angular to subrounded, coarse to fine-grained lithic grains and quartz.
10		55	35	10	GW-GM	2.5YR 7/4	S	Light reddish brown gravel with silt and sand, caliche cement. Gravel is angular to subrounded, composed of limestone, silicified limestone, phyllite, reddish brown sandstone, and quartzite; caliche chunks generated by drilling. Sand fraction is coarse to fine-grained, well-graded, angular to subrounded quartz and lithic grains. Coarser sand fraction is dominated by lithic grains; finer sand has a greater amount of quartz grains.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
20	Basin Fill	5	70	25	SM	2.5YR 8/3	S	Pink silty sand; caliche cement. Gravel clasts are pebble sized, subangular to subrounded; composition is polymictic with lithologies as listed above. Sand is subangular to rounded lithic and quartz grains.
30		15	60	25	SM	2.5YR 7/4	S	Light reddish brown silty sand with gravel, caliche cement. Some swelling clays in the fine fraction, mixed with caliche. Sand is primarily fine-grained, well-graded through to silt.
40			35	65	ML	2.5YR 6/4	S	Light reddish brown sandy silt. Silt is calcareous. Sand fraction is mostly medium to fine-grained, mostly lithic grains with lesser quartz grains. Lithic grains include reddish brown, gray to white sandstone and siltstone, caliche particles, phyllite, quartzite and trace limestone. Most sand grains are angular to subangular.
50		tr	35	65	ML	2.5YR 7/3	S	Light reddish brown sandy silt; caliche cement. Sand is coarse to fine-grained, composed of lithic grains and quartz. Trace gravel and lithic sand grains are composed of abundant gray, pink, and reddish brown fine-grained sandstone and quartzite, with lesser amounts of phyllite and limestone. Caliche is well indurated, drilling as chunks and chips.
60		50	30	20	GC	2.5YR 6/4	S	Light reddish brown clayey gravel with sand. 20% sandy clay balls. Gravel is polymictic, composed of abundant quartzite, reddish brown fine-grained sandstone; moderate amount of phyllite, schist metamorphic quartz, with lesser gray limestone with trace oxidized pyrite, and trace amounts of reddish brown volcanic and green siltstone. Sand is composed of quartz and lithic grains. Clays swell in water. Caliche is well indurated, drilling as chunks.
70		30	40	20	SM	2.5YR 7/3	S	Light reddish brown silty sand with gravel. Sand and gravel compositions are as above with slightly more limestone and a small amount of chert in the gravel fraction. 20% sandy swelling clay balls.
75			55	45	SC	2.5YR 6/3	S	Light reddish brown clayey sand; some silt. Clays are calcareous, swelling. Sand is medium- to fine-grained, subangular to rounded, composed of quartz and lithic grains including white, reddish brown, gray, and green sandstone, siltstone, and quartzite.
77		65	30	5	GP	2.5YR 6/4	M	Light reddish brown gravel with sand. Gravel is 95% reddish brown, pink, gray, and greenish gray sandstone and siltstone. Remainder is phyllite, limestone and chert with rare reddish fine-grained volcanics. Clasts are mostly subangular with some angular material. Sand fraction is coarse- to fine-grained, but mostly coarse lithic grains. Few thin calcite and caliche coatings on clasts; caliche cement is weak.
80		65	25	10	GP-GC	2.5YR 6/4	M	Light reddish brown gravel with clay and sand. Gravel is pebble-sized, polymictic, composed of sandstone, siltstone, phyllite, with little limestone and chert. Sand is composed primarily of coarse lithic grains of same composition.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
81	Basin Fill	85	10	5	GP	mottled	M	Mottled reddish brown, gray, black, pink and white gravel. Gravel is poorly graded, mostly subangular, polymictic, composed of reddish brown and gray limestone, black chert, white to pink silicified limestone, and pinkish gray phyllite. Clasts are equidimensional to elongate up to 2 1/2" on long side. Few thin calcite coatings.
90		80	10	10	GP-GC	2.5YR 7/3	M	Light reddish brown gravel with clay. Gravel is mostly subangular with few subrounded clasts composed of reddish brown to gray sandstone, greenish gray quartzite, gray phyllite, and limestone. Clay is calcareous, sticky, cohesive.
100		20	60	20	SC	2.5YR 5/4	W	Reddish brown clayey sand with gravel. Gravel is angular to subrounded pebbles, primarily of phyllite, little quartz, silty reddish brown sand, poorly sorted. Uniform color. Sand is mostly coarse-grained, lithic grains poorly sorted, subangular.
110		25	65	10	SW-SM	2.5YR 6/6	N	Light red sand with silt and gravel. Gravel is composed of phyllite and metamorphic quartz derived from Pinal Schist, and reddish brown poorly sorted sandstone with manganese oxide spots. Sand is mostly coarse-grained, subangular, poorly graded and sorted, composed primarily of lithic grains with few quartz grains.
120		10	80	10	GP-GC	2.5YR 6/6	N	Light red gravel with clay. Gravel is angular to subrounded, composed of Pinal Schist clasts. Some silt and sand adhered to phyllite clasts. Probably rubble near the top of the Glance Conglomerate.
130	Glance Conglomerate				bedrock	2.5YR 5/4	N	Reddish brown Glance Conglomerate. Pinal Schist (phyllite and metamorphic quartz) clasts in reddish brown silty sandstone matrix. Uniform coloration.
140						2.5YR 5/3 2.5YR 5/2 2.5YR 6/1	N	Reddish brown, weak red, to reddish gray Glance Conglomerate. Gravel-sized clasts are primarily Pinal Schist with little metamorphic quartz and quartzite (possibly derived from the Bolsa Quartzite) in a silty sandstone matrix. Trace white crystalline calcite in the matrix.
150						2.5YR 5/4	N	Reddish brown Glance Conglomerate, composition as above. Conglomerate clasts are up to 2 cm in diameter, and are angular to subrounded, locally with some rounded surfaces.
160						2.5YR 5/2 2.5YR 5/4	N	Reddish brown to weak red Glance Conglomerate. Mostly pebble-size phyllite and little metamorphic quartz derived from Pinal Schist and few quartzite clasts in a sandy siltstone matrix.
170						2.5YR 5/4	N	Reddish brown to weak red Glance Conglomerate, as above; abundant Pinal Schist phyllite and quartz, with little sericitic sandstone and quartzite in reddish brown sandy siltstone matrix.
180						2.5YR 5/3	N	Reddish brown silty and clayey sandstone; sand grains are mostly fine-grained with scattered coarser clear quartzite lithic grains. Sandstone bed in the Glance Conglomerate.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
190	Glance Conglomerate					2.5YR 5/6	N	Red Glance Conglomerate. Conglomerate is composed of primarily subangular to angular phyllite and metamorphic quartz with few coarse-grained white quartzite gravel in a silty sandstone matrix.
200						2.5YR 6/3	N	Light reddish brown Glance Conglomerate, Pinal Schist pebbles and coarse sand-sized lithic grains in fine silty sandstone matrix.
210						2.5YR 4/3	N	Reddish brown silty clayey fine-grained sandstone. Mudstone layer within the Glance Conglomerate.
220						2.5YR 5/3	N	Reddish brown Glance Conglomerate, composed of up to 3 cm, phyllite, metamorphic quartz, micaceous quartzite, and rare coarse- grained arkose gravel clasts in a silty sandstone matrix.
230						2.5YR 5/4	N	Reddish brown Glance Conglomerate, as above.
240						2.5YR 5/3	N	Reddish brown Glance Conglomerate, as above with finer gravel pebbles up to 1 cm on long side.
242						2.5 YR 4/4	N	Reddish brown silty fine-grained sandstone, slightly micaceous. Sandstone layer in the Glance Conglomerate.
250						2.5YR 5/4	N	Reddish brown Glance Conglomerate; Pinal Schist phyllite and metamorphic quartz gravel in a sandy silt clayey matrix.
260						2.5YR 6/3	N	Light reddish brown Glance Conglomerate; Pinal Schist phyllite and metamorphic quartz, and few quartzite clasts in a sandy silt and clay mudstone matrix.
270						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Abundant Pinal Schist (phyllite and metamorphic quartz), with little matrix material.
280						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Abundant Pinal Schist and rare white quartzite pebbles in silty sandstone matrix.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
290	Glance Conglomerate					2.5YR 5/4	N	Reddish brown Glance Conglomerate. Pinal Schist clasts in fairly hard, poorly sorted silty sandstone matrix.
300						2.5YR 5/3	N	Reddish brown Glance Conglomerate. As above.
310						2.5YR 5/3	N	Reddish brown Glance Conglomerate, as above. Pinal Schist phyllite and metamorphic quartz clasts are angular to subangular, up to 2 cm on a long side, grading to coarse sand, in a silty sandstone matrix.
320						2.5YR 5/3	N	Reddish brown Glance Conglomerate, Pinal Schist clasts in mudstone matrix; abundant matrix material, fewer pebbles.
330						2.5YR 6/3	N	Light reddish brown Glance Conglomerate, abundant fine gravel and coarse sand-size Pinal Schist clasts in silty sandstone matrix.
340						2.5YR 6/3	N	Reddish brown Glance Conglomerate. Mostly coarse sand-sized and fine pebble-size particles of Pinal Schist in silty sandstone matrix.
350						2.5YR 6/3	N	Reddish brown Glance Conglomerate, mostly coarse sand-size Pinal Schist clast with few pebbles in silty sandstone matrix.
360						2.5YR 6/3	N	Reddish brown Glance Conglomerate. Pinal Schist clasts are mostly fine-to coarse-grained sand-sized particles with few pebbles in a silty and clayey sandstone matrix.
370						2.5YR 6/3	N	As above, abundant pebbles.
380						2.5YR 5/3	N	Reddish brown Glance Conglomerate. Sand and small pebble Pinal Schist (phyllite and metamorphic quartz) clasts in silty sandstone matrix. Abundant sandy matrix material.
390						2.5YR 5/3	N	Reddish brown Glance Conglomerate. Abundant Pinal Schist pebbles and coarse to fine sand-size lithic grains in sandy mudstone matrix.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
400	Glance Conglomerate					2.5YR 5/3	N	Reddish brown Glance Conglomerate. Angular to subrounded pebbles and sand-sized material derived from Pinal Schist in sandy siltstone matrix.
410						2.5YR 6/4	N	Light reddish brown Glance Conglomerate. Subangular to subrounded Pinal Schist clasts, mostly coarse sand-size, with some pebbles up to 1 cm diameter, in a sandy siltstone matrix.
420						2.5YR 5/3	N	Reddish brown Glance Conglomerate, as above. Rig chatter at 425' indicates presence of coarse cobble zone in the conglomerate.
430						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Few angular Pinal Schist phyllite and quartz clasts up to 1cm in clayey siltstone.
440						2.5YR 6/4	N	Light reddish brown Glance Conglomerate. Silt, clay, and sand mudstone with scattered fine pebble and coarse sand-sized Pinal Schist clasts. Rig chatter at 445 ' indicates presence of a coarse cobble zone in the conglomerate.
450						2.5YR 5/3	N	Reddish brown Glance Conglomerate. Sample is largely angular to subangular Pinal Schist pebbles and coarse lithic sand grains, with about 10% sandy silt matrix material.
460						2.5YR 6/4	N	Light reddish brown Glance Conglomerate, as above with a silt, sand and clay mudstone matrix.
470						2.5YR 6/4	N	Reddish brown Glance Conglomerate. As above with clayey, silt and sand mudstone matrix.
480						2.5YR5/3	N	Reddish brown Glance Conglomerate. Sample is mostly ground up Pinal Schist phyllite and quartz, and white granular quartzite (possibly derived from the Bolsa Quartzite). Gravel and coarse sand in a fairly well-indurated sandy siltstone matrix.
490						2.5YR 4/2	N	Weak red Glance Conglomerate. Sample is mostly ground up Pinal Schist sand and pebble size fragments with little sandy siltstone matrix material.
500						2.5YR 5/3	N	Reddish brown Glance Conglomerate, as above. Attempted to changed drilling method from conventional rotary to reverse circulation with tricone; RC attempt was unsuccessful due to the low water production by the formation.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
510	Glance Conglomerate					2.5YR 5/3	N	Reddish brown Glance Conglomerate. Abundant subangular to subrounded pebble (< 2 cm) conglomerate. Pebbles are phyllite and metamorphic quartz derived from the Pinal Schist with few white granular quartzites. Little matrix material.
520						2.5YR 5/3	N	Reddish brown Glance Conglomerate, as above.
530						2.5YR 5/4 2.5YR 6/6	W	Reddish brown Glance Conglomerate; portions of fine matrix material are light red. Subangular pebble conglomerate; clasts up to 1.5cm diameter in a silt, clay, and sand mudstone matrix.
540						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Sample is mostly angular to subrounded, coarse sand-size particles with few pebbles of Pinal Schist (phyllite and metamorphic quartz) and granular quartzite.
550						2.5YR 5/4	N	Reddish brown Glance Conglomerate, as above.
560						2.5YR 5/3	N	Reddish brown Glance Conglomerate. Mostly medium to coarse grained sand-sized particles with few angular to subrounded pebbles; derived from Pinal Schist.
570						2.5YR 5/4	N	Reddish brown Glance Conglomerate. Angular to subangular, coarse sand and gravel sized Pinal Schist-derived material in silty matrix..
580						2.5YR 5/4	N	Reddish brown Glance Conglomerate, as above.
590						2.5 YR 5/6	N	Red Glance Conglomerate. Pebbles and coarse sand-sized subrounded phyllite and quartz clasts derived from the Pinal Schist in a red siltstone matrix.
600						2.5YR 5/4	W	Reddish brown Glance Conglomerate. Mostly sand-sized particles with few fine pebbles derived from the Pinal Schist in a silt, sand and clay mudstone matrix. Clay is slightly calcareous.
610						10R 6/3	N	Pale red Glance Conglomerate. Sample is mostly loose fine to coarse sand with 10% subangular gravel derived from the Pinal Schist and 15% siltstone matrix material.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-10GU**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
620	Glance Conglomerate					10R 6/3	N	Pale red Glance Conglomerate. As above with 30% gravel-sized clasts.
630						2.5YR 7/4	W	Light reddish brown Glance Conglomerate. Mostly sand-sized Pinal Schist clasts in silty, clayey matrix. Clayey matrix slightly calcareous.
640						2.5YR 6/4	W	Light reddish brown Glance Conglomerate. Medium to coarse sand sized particles and fine angular to subrounded pebbles derived from Pinal Schist in silty clayey matrix.
650						2.5YR 6/4	W	Light reddish brown Glance Conglomerate, as above.
660						2.5YR 6/4 2.5YR 6/1	N	Light reddish brown to reddish gray Glance Conglomerate. Angular to subangular chips of Pinal Schist and rare quartz in siltstone matrix. Matrix is reddish brown, clasts are mostly reddish gray.
670						2.5YR 6/4	W	Light reddish brown Glance Conglomerate. Angular to subangular coarse sand and gravel derived from Pinal Schist in silty, slightly clayey and sand mudstone matrix. HCl, reacts with matrix material only. Clasts are reddish gray, matrix reddish brown.
680						2.5YR 6/4	W	Light reddish brown Glance Conglomerate, as above.
690						10R 6/3	W	Pale red Glance Conglomerate, as above, occasional Pinal Schist clasts up to 3 cm on long side.
700						2.5YR 6/3	W	Light reddish brown Glance Conglomerate. Angular to subangular Pinal Schist clasts up to 1 cm in reddish brown silty sandstone matrix. Formation is producing very little water. TD = 700 ft bls at 13:40 on 6/29/2008

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
0	Basin Fill	20	20	60	ML	7.5YR 5/4	S	Brown sandy silt with gravel. Gravel clasts are up to 3" diameter, few cobbles to 6", angular to well-rounded; composed primarily of dark through light gray limestone, with some fine to medium-grained sandstone. Sand fraction is medium to very fine-grained. Material is loose, dry; strong reaction to HCl.
10		35	40	25	SM	7.5YR 8/1	S	White silty sand with gravel; caliche cement. Gravel clasts are up to 1" in diameter, angular to rounded, primarily composed of dark through light gray crystalline limestone, some reddish sandstone; small amount of chert. Sand fraction is coarse through fine-grained, cemented with white caliche, soft, dry; very strong reaction to HCl.
20		15	25	60	ML	7.5YR 7/2	S	Pinkish gray sandy silt with gravel; caliche cement. Gravels and sands are as described above, powdery, flour-like texture, ground up caliche, dry; very strong reaction to HCl.
30		5	25	70	ML	7.5YR 6/3	S	Light brown sandy silt; caliche cement, trace gravel. Gravel clasts are up to 1/2" diameter, composed primarily of gray limestone. Sand fraction is primarily fine to very fine-grained, powdery flour-like texture, dry; very strong reaction to HCl.
40			10	90	ML	7.5YR 7/2	S	Pinkish gray silt; caliche ground to a silt during drilling; powdery flour-like texture, dry; very strong reaction to HCl.
50		40	20	40	GM	7.5YR 7/2	S	Pinkish gray silty gravel with sand; caliche-cement. Gravel clasts are up to 2" diameter, angular to well-rounded, composed of primarily light through dark gray crystalline limestone with quartz, arkose, some reddish mudstone. Sand fraction is coarse through fine-grained; silt fraction is primarily ground up calcareous cement; dry; very strong reaction to HCl.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-11G**

60	Basin Fill	5	20	75	ML	7.5YR 6/3	S	Light brown caliche-cemented silt with sand. Gravel clasts are up to 1/2" diameter; primarily limestone. Sand fraction is mostly fine-grained. Fine fraction is ground up caliche cement, powdery, flour-like texture, dry; very strong reaction to HCl.
70		15	20	65	ML	7.5YR 6/3	S	Light brown silt with sand, caliche cement. As above, except that gravel fraction has increased.
80		30	20	45	ML	7.5YR 6/3	S	Light brown gravelly silt with sand, caliche cement.
90		25	20	55	ML	7.5YR 6/3	S	Light brown gravelly silt with sand, caliche cement.
100		35	20	45	ML	7.5YR 6/3	S	Light brown gravelly silt with sand, caliche cement. Similar to above except that gravels are large, up to 2" diameter, primarily dark through light gray limestone, some quartz, chert, and fine-grained sandstone. Dry, very strong reaction to HCl.
110		80	10	10	GW-GM	Mottled	S	Mottled gravel with silt. Light to dark gray and red; gravel to 2", angular to subrounded, gray limestone, dark red fine-grained sandstone, few cherty clasts. Few gravel clasts coated with carbonate. Loose, dry, strong reaction to HCl.
120		60	20	20	GW	7.5YR 6/3	S	Light brown silty, gravel with sand. Gravel fraction is angular to subrounded, fine-grained up to 1/2" diameter, primarily dark through light gray limestones, some quartz, chert, fine-grained sandstones. Sand fraction is coarse through fine-grained; fines are as a carbonate, dry, very strong reaction to HCl.
130		80	10	10	GW-GM	Mottled	S	Mottled gravel with silt, as described for the 110' bls depth.
140		50	25	25	GM	2.5YR 6/2	S	Pale red silty gravel with sand. Gravel to 1/2", angular to rounded; dark to light gray with whitish and reddish limestone, some quartz and fine-grained reddish sandstone with calcareous cement. Sand coarse to very fine-grained; fines are a calcareous silt; dry, very strong reaction to HCl.
150		10	50	40	SM	2.5YR 6/2	S	Pale red silty sand. Gravel clasts are up to 1/2" diameter, angular to fairly well-rounded, primarily as dark through light gray limestone, some reddish fine-grained calcareous sandstone, few quartz. Sand fraction is coarse through very fine-grained, but is primarily silty, dry, strong reaction to HCl.

160	Basin Fill	30	40	30	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel. As described above, except for an increase in the gravel fraction and a corresponding decrease in the sand and silt fractions.
170		30	40	30	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel, as above.
180		30	40	30	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel, as above.
190		50	25	25	GM	7.5YR 5/4	S	Brown silty gravel with sand. Gravel fraction to 1", angular to rounded, dark to light gray, whitish and reddish limestones, reddish fine-grained calcareous cemented sandstones; carbonate coated clasts. Sand coarse to very fine-grained, siltly calcareous fines; dry, very strong reaction to HCl.
200		75	15	10	GW-GM	2.5YR 4/3	S	Reddish brown gravel with silt and sand, gravel fine grained, to 1"; angular to well rounded, clasts of Pinal Schist; reddish fine-grained calcareous sandstone, dark to light gray limestone, and few pale green argillite pieces. Sand coarse to very fine-grained, trace calcareous silt, dry, strong reaction to HCl.
210		15	35	50	ML	2.5YR 5/3	S	Reddish brown sandy silt with gravel. Gravel to 1/2", angular to rounded, lithology includes calcareous sandstone, siltstone, and mudstone, Pinal Schist with quartz and limestone fragments; Sand fine to very fine-grained; Silty calcareous fines; dry, strong reaction to HCl.
220		15	35	50	ML	2.5YR 5/3	S	Reddish brown sandy silt with gravel, as above. Gravel clasts are primarily Pinal Schist and limestone. Few calcite-sand cement coatings.
230		30	55	15	SM	2.5YR 6/3	S	Light reddish brown silty sand with gravel. Gravel to 1/2", angular to rounded, clasts are fine-grained sandstone with calcareous cement, quartz, and siltstone; Sand mostly coarse to fine-grained, Silty calcareous fines; dry, strong reaction to HCl.
240	Morita Formation				Bedrock	2.5YR 6/3	S	Light reddish brown arkosic sandstone, fine-grained, calcareous cement, fairly soft, platy, dry, strong reaction to HCl. Morita Formation, upper contact with basin fill.
250						2.5YR 5/4	S	Reddish brown mudstone. Platy, calcareous, fairly soft, homogenous, dry, strong reaction to HCl. Morita Formation.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-11G**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
260	Morita Formation					2.5YR 5/3	S	Reddish brown mudstone, weakly indurated, slightly laminated, platy, soft, dry, strong reaction to HCl. Morita Formation.
270						2.5YR 5/3 2.5YR 7/1	S	Reddish brown and light reddish gray siltstone and sandstone. Siltstone is as described above except that it is considerably harder, and has few bleached spots. Sandstone is composed of light gray quartz, fine-grained with calcareous cement, fairly hard, platy, dry, strong reaction to HCl. Morita Formation.
280						2.5YR 5/3	S	Reddish brown siltstone, weakly laminated, platy, fairly soft, dry, strong reaction to HCl. Morita Formation.
290						2.5YR 5/3	M	Reddish brown silty sandstone, fine-grained, calcareous cement, slightly platy, homogenous, fairly soft, can be broken with fingers; dry, moderate reaction to HCl. Morita Formation.
300						2.5YR 5/3	M	Reddish brown fine-grained sandstone, as above.
310						2.5YR 4/2	M	Weak red fine-grained silty sandstone, as above; with few small bleached spots.
320						2.5YR 4/2	M	Weak red silty sandstone with about 15-20% gray, micritic limestone, possibly occuring as nodules. Silty sandstone is very similar to above except that it tends to be finer grained and somewhat more silty. Moderate reaction to HCl.
330						2.5YR5/3	M	Reddish brown siltstone. As above except that light greenish gray, sandstone has diminished to less than 1%.
340						2.5YR 4/3	M	Reddish brown sandstone, fine grained, calcareous cement, platy, fairly hard, small amount (<1%) of a light gray quartz sandstone; strong reaction to HCl. Driller is injecting water to wet cuttings.
350						2.5YR 4/3	S	Reddish brown siltstone, platy, very weakly laminated, fairly soft, calcareous cement; very strong reaction to HCl.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-11G**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
360	Morita Formation					2.5YR 4/2	S	Weak red silty sandstone. Platy, calcareous cement, hard; 20% light gray limestone, possibly occuring as nodules. Strong reaction to HCl.
370						2.5YR 4/3	S	Reddish brown sandstone with 10% gray limestone.
380						2.5YR 4/3	S	As above.
390						2.5YR 4/3	S	Reddish brown silty sandstone, fine-grained, platy, calcareous cement, fairly homogenous, moderately hard; strong reaction to HCL.
400						2.5YR 4/3	S	As above.
410						2.5YR 4/2	S	Weak red silty fine-grained sandstone. Mostly quartz with a few percent feldspar grains in a calcareous matrix.
420						2.5YR 4/2	S	Weak red silty fine-grained sandstone. As above.
430						2.5YR 4/2	S	Weak red silty fine-grained sandstone. As above.
440						2.5YR 4/2	S	Weak red silty fine-grained sandstone. Mostly quartz with a few percent feldspar grains in a calcareous matrix.
450						2.5YR 4/2	M	Weak red silty, clayey fine-grained sandstone.

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
10	Basin Fill	65	25	10	GP	2.5YR 8/3	S	Pink, strongly cemented gravel with clay and sand. Angular broken to subrounded clasts of gray limestone gray chert, pink, white to gray fine-grained sandstone, gold siltstone, sand to gravel sized, cemented with hard caliche.
20		25	55	20	SM	5YR 7/3	S	Pink, strongly cemented silty sand with gravel. Gravel and lithic sand grains are angular to subrounded, composed primarily of gray to pinkish gray limestone with a little chert, fine grained sandstone, and white quartzite clasts, cemented with caliche. Caliche is softer and more clayey than above.
30		5	50	45	SC	5YR 7/4	S	Pink, strongly cemented clayey sand. Sample is mostly moderately well indurated broken chunks (generated by drilling) of sandy clayey caliche and few limestone chips.
40		10	25	65	CL	7.5YR 5/4	S	Brown, strongly cemented sandy clay with gravel. Sample is ground up (by drilling) clayey sandy caliche with angular freshly broken gravel clasts composed of gray limestone and a small amount of chert.
50		25	33	40	SC	5YR 6/4		Reddish brown, strongly cemented clayey sand with gravel. Gravel is mostly brown gray limestone with little gray sandstone and reddish brown sandy siltstone.
60		25	40	35	SM	5YR 6/3	S	Light reddish brown, strongly cemented sand with gravel, silt and clay. Clasts are primarily gray limestone with black hairline fractures and silicified limestone, with lesser greenish gray and reddish brown fine-grained sandstone. Gravel to 3 cm, subrounded to angular. Sand coarse to fine-grained composed of quartz and lithic grains.
65		85	10	5	GP	Mottled, 5YR 6/3	M	Mottled gravel, light reddish brown caliche cement. Abundant pinkish gray sandstone with fewer gray limestone, reddish brown and greenish gray fine-grained quartzite clasts. Clasts are =3 cm diameter, subangular to subrounded with caliche coatings.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-13B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
70	Basin Fill	tr	65	35	SC	2.5YR6/3	M	Light reddish brown, moderately cemented, clayey to silty sand. Caliche is clayey, swells and disintegrates in water. Sand is coarse to fine lithic grains of gray limestone, reddish brown siltstone, gray phyllite, fine-grained greenish gray sandstone, and white quartz. Damp.
80		15	60	25	SC	5YR 6/3	S	Light reddish brown, calcareous clayey sand with gravel. Gravel clasts to 3 cm are pink, gray and tan; primarily sandstones with lesser silty dark gray limestone. Sand as above. Damp.
90		15	60	25	SC	5YR 5/4	S	Reddish brown, calcareous clayey sand with gravel. Gravel is reddish brown, gray, green fine-grained sandstones, reddish brown siltstone, little phyllite and white quartz, trace gray limestone; mostly =1 cm diameter; caliche surface coatings. Sand is fine to coarse-grained lithic grains and quartz.
100		5	65	30	SC	5YR 6/4	S	Light reddish brown clayey sand. Sand is fine to coarse-grained, well-graded through to silt. Sticky and cohesive, swelling when wet.
110		15	65	20	SC	2.5YR 5/3	S	Reddish brown clayey sand with gravel. Gravel is variably colored fine-grained sandstones with lesser siltstone, limestone, chert, phyllite and quartz; clasts are = 1 cm pebbles. Sand is fine to coarse lithic grains and quartz. Clayey calcareous coatings.
120		70	15	15	GC	2.5YR 7/3	S	Light reddish brown clayey gravel with sand. Gravel comprises angular to subrounded = 1 cm pebbles, including green, gray, and reddish brown sandstone, reddish brown siltstone, gray limestone, chert, phyllite, and quartzite; with clayey calcite coatings. Sand is fine to coarse-grained, mostly lithic grains.
130		70	20	10	GP-GC	5YR 7/2	S	Pinkish gray gravel with clay and sand. As above; clayey calcite mixed with fine sand coatings on pebbles.
140		70	20	10	GP-GC	5YR 6/3-6/2	S	Light reddish brown to pinkish gray gravel with clay and sand; little clay. As above.
150		60	30	10	GP-GC	2.5YR 7/3	S	Light reddish brown gravel with clay and sand. Composition as above. Gravel is multicolored when washed; clay imparts overall light reddish brown color.
160		50	40	10	GP-GC	2.5YR 6/2	S	Pale red gravel with clay and sand. As above with about 10% more sand and less gravel.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-13B**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
170	Basin Fill	65	20	15	GC	2.5YR 6/3	S	Light reddish brown clayey gravel with sand. Gravel clasts are subrounded on weathered surfaces, = 2 cm diameter; lithologic composition as above; continued clayey calcite-fine sand cement coatings on some clasts.
180		15	65	20	SC	2.5YR 6/3	S	Light reddish brown clayey sand with gravel; little silt. Sand is fine to coarse-grained, well-graded, composed mostly of lithic grains with lesser quartz. Gravel composition as above with calcareous coatings on some clasts; most are pebbles = 1 cm.
190		25	65	10	SW-SM	2.5YR 5/3	S	Reddish brown sand with gravel; sand is mostly lithic grains derived from sandstone, siltstone, limestone and Pinal Schist (phyllite and quartz); gravel clasts are of same lithology. Sand is mostly subrounded to subangular; fine to coarse-grained, well-graded through to silt.
200		65	30	5	GP	5YR 7/2	S	Pinkish gray gravel with sand; little silt and clay. Gravel composition is as previous, several intervals since 120'; sand is mostly coarse grained lithic grains. Some clay, fine carbonate, fine sand mix cement coatings on gravel clasts.
210		60	35	5	GP	5YR 7/2-7/3	S	Pinkish gray to pink gravel with sand. Gravel is =1.5cm; sand is mostly coarse-grained, compositions as above with the exception of one greenish chloritic intrusive clast.
220		20	60	20	SC	2.5YR 6/3	S	Light reddish brown silty sand with gravel. Sand is mostly lithic grains, fine to coarse-grained. Gravel and lithic sand grains are green, reddish brown, gray fine-grained sandstones and siltstones with a little gray limestone, Pinal Schist (phyllite and metamorphic quartz). Caliche-like (clayey carbonate-fine sand mix) coatings on some clasts.
230		20	60	20	SC	2.5YR 6/3	S	Light reddish brown silty sand with gravel, as above.
238								**First water at 238 ft bls.**
240		35	15	50	CL	5YR 7/3	S	Pink gravelly clay with sand. Clay is sticky, cohesive, plastic. Gravel is subrounded pebbles to angular broken chips developed during drilling. Sand is mostly coarse-grained lithic grains. Gravel and lithic sand grains include sandstone siltstone, chert, limestone, phyllite, and quartz.
250		75	20	5	GP	2.5YR 7/3	S	Light reddish brown gravel with sand. Sand is fine to coarse-grained composed of lithic grains and quartz. Gravel to = 1 cm and lithic sand grains are reddish brown sandstone, reddish and greenish siltstone, gray limestone, reddish gray phyllite, variably colored chert, and white quartz.
260		40	55	5	SW	2.5YR 5/2	S	Weak red sand with gravel. Sand is mostly coarse-grained but ranges from fine to coarse. Gravel clasts are up to 3 cm, coated with calcite and sand. Clast lithologies are as above plus gray arkosic sandstone.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-13B**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
270	Basin Fill	60	35	5	GP	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel mostly = 1 cm diameter, subrounded to angular freshly broken faces; lithologies as above, few CaCo3 coatings. Sand is fine to coarse, composed mostly of coarse-grained lithic grains.
280		55	40	5	GP	2.5YR 5/2	S	Weak red gravel with sand. Gravel clasts are gray limestone, reddish brown to light gray sandstone, reddish brown siltstone, phyllite, and quartz. Sand-sized particles are mostly lithic grains, many angular, probably generated during drilling. Much of the gravel is angular and freshly broken.
290		65	30	5	GP	2.5YR 5/2	S	Weak red gravel with sand, as above. Gravel composition as above with trace quartzite and green siltstone in addition. Few coarse gravel clasts up to 4 cm in diameter.
300		60	35	5	GP	3.5YR 5/2	M	Weak red polymictic gravel with sand, as above. Gravel is mostly sandstone and siltstone with lesser limestone, phyllite, quartz; with trace rhyolite and Glance Conglomerate clasts. Sand is fine to coarse-grained, mostly lithic grains. Water production is approximately 200 gpm.
310		70	25	5	GP	2.5YR 5/2	M	Weak red gravel with sand. As above; gravel clasts are sandstone, siltstone, limestone, phyllite, quartz, and little rhyolite tuff. Continuing calcite coatings on some clasts.
320		60	35	5	GP	2.5YR 5/2	M	Weak red gravel with sand, as above.
330		75	20	5	GP	2.5YR 5/2	M	Weak red gravel with sand, as above. Gravel clasts include sandstone, arkose, siltstone, gray limestone, phyllite, quartz, and rare tuff; are angular to subrounded; up to 3 cm in diameter; with few white calcite coatings on weathered surfaces.
340		80	20	tr	GP	2.5YR 5/2	M	Weak red gravel with sand; polymictic, clast lithologies as above. Very few fines; sand is mostly coarse lithic grains, well washed by continued high water production.
350		50	45	5	GP	2.5YR 5/2	M	Weak red gravel with sand, polymictic, as above. Calcite coatings on some pebbles.
360		15	85	tr	SW	2.5YR 5/3	M	Reddish brown sand with gravel. Gravel angular to subrounded, to 4 cm, most clasts = 2 cm, composed of sandstone, siltstone, limestone, phyllite, metamorphic quartz (derived from the Pinal Schist), chert, and arkose; calcite-fine sand cement coatings on some pebbles. Sand fine to coarse quartz and lithic grains.

Project Name: **Bisbee Mitigation Order**								Boring No.: **BMO-2008-13B**
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**Fl**				
370	Basin Fill	45	55	tr	SW	2.5 YR 5/3	M	Reddish brown sand with gravel. Gravel is mostly gray and reddish brown sandstone; arkose, and phyllite with lesser amounts of other lithologies listed above. Sand is mostly medium to coarse, angular to subangular lithic grains.
380		35	65	tr	SW	2.5 YR 5/3	M	Reddish brown sand with gravel. As above. Trace buff-colored limestone with black microfractures.
390		55	45	tr	GP	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel composition as previously described at 360, clasts up to 3 cm diameter but mostly = 1 cm. Sand is fine to coarse lithic grains as above.
400		55	45	tr	GP	2.5YR 5/3	M	Reddish brown gravel with sand. Gravel is angular to subrounded, gray to reddish brown sandstone, arkose, siltstone, quartzite, phyllite, quartz, with only trace amount of limestone, less than previous intervals. Sand is fine to coarse-grained lithic grains and quartz. Fines if present are washed out.
410		75	25	tr	GP	2.5YR 5/2	M	Weak red gravel with sand. Gravel clasts are up to 2 cm, angular to subrounded Pinal Schist (phyllite & metamorphic quartz), gray limestone and chert, gray and reddish brown sandstone, siltstone, and arkose, white quartzite, and trace volcanics. Sand as above. Calcite-fine sand cement coatings on many pebbles.
420		70	25	5	GP	2.5YR 5/2	W	Weak red gravel with sand. Gravel to 2 cm, calcite +/- sand coatings on weathered surfaces; phyllite and metamorphic quartz derived from Pinal Schist clasts are most abundant with lesser amounts of arkosic fine-grained sandstone, medium to coarse-grained vitreous quartzite, little gray limestone and reddish brown siltstone; trace chert and greenish fine-grained sandstone.
430		80	20	TR	GP	2.5YR 5/2	W	Weak red gravel with sand. As above, but coarser with gravel clasts up to 3 cm; composed mostly of sandstone, arkosic sandstone, quartzite, and phyllite clasts, with trace aphanitic volcanics. Continued sandy calcite coatings on weathered pebble surfaces.
440		80	20	tr	GP	2.5YR 5/2	W	Weak red gravel with sand. As above; abundant phyllite, metamorphic quartz, gray and green quartz sandstone, few limestones; calcite-sand cement coatings. Clasts are subangular to subrounded, angular where broken. Sand is fine to coarse-grained, mostly lithic grains and quartz.
450		80	20	tr	GP	2.5YR 5/2 2.5YR 5/1	W	Weak red to reddish gray gravel with sand. Most clasts subangular, almost all are phyllite with little quartz derived from Pinal Schist; calcite-sand cement coatings common on weathered pebble surfaces. HCl reaction limited to cement.
460		80	20	tr	GP	2.5YR 5/2 2.5YR 5/1	W	Weak red to reddish gray gravel with sand, as above. Mostly Pinal Schist (phyllite and quartz) clasts with few sandstone clasts. Calcite-fine sand cement coatings.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-13B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	Fl	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
470	Basin Fill	80	20	tr	GP	2.5YR 5/2 2.5YR 5/1 2.5YR 6/3	W	Weak red to reddish gray to light reddish brown gravel with sand, as above. Calcite-fine sand cement coatings.
480		75	25	tr	GP	2.5YR 5/2 2.5YR 5/1 2.5YR 6/3	M	Weak red, reddish gray to light reddish brown gravel with sand. Angular to subrounded = 1 cm Pinal Schist clasts in calcite-reddish brown fine grain sand matrix. Few granular quartzite pebbles. Sand is fine to coarse-grained.
490		80	20	tr	GP	2.5YR 5/2 2.5YR 5/1 2.5YR 5/3	W	Weak red, reddish gray to reddish brown gravel with sand. Composition as above. Most clasts = 1 cm with few oblong, up to 3 cm on long side. Continued calcite-fine sand cement coatings; HCl reaction restricted to cement.
500		75	25	tr	GP	2.5YR 6/3 2.5YR 5/1	W	Weak red to light reddish brown gravel with sand. Pinal Schist phyllite, metamorphic quartz and rare quartzite, subangular to subrounded clasts mostly = 3 cm with some calcite-sand surface coatings. Sand is fine to coarse-grained, reddish brown, composed of quartz and lithic grains.
510		50	45	5	GP	2.5YR 5/2	W	Weak red gravel with sand. Increased sand content. As above, but with a little arkosic sandstone, and quartz sandstone with cement dissolution texture. Pebbles are smaller (mostly = 1 cm, few larger) and more subrounded. 5% material is chunks of lithic sand grains cemented with calcareous reddish brown clay. Few clasts have calcite-sand coatings.
520	Upper Mural Limestone				Bedrock	5 YR 7/2 7.5YR 7/1	S	Pinkish gray limestone with few orange clayey fractures, 90%; basin fill clasts 10%. Few of the limestone chips show rounding with calcite-sand cement indicating a rubbly top of the formation. Limestone has few small shell fragments and few 1 mm spots of recrystallized sparry calcite; otherwise micritic. Few orange calcareous clay balls. Probably Upper Mural Limestone.
526						7.5YR 6/1 7.5YR 7/1		Gray to light gray limestone; few calcite microveinlets, patches of recrystallization, and fine shell fragments. Fractures have orange calcareous clay fillings which pass through cyclone as 15% orange clay balls, turning discharge water orange.
530						7.5YR 6/2	S	Pinkish gray limestone. Reddish orange hematite-limonite and calcareous clay filled microfractures, patches of fine recrystallization; few shell fragments, and discontinuous calcite microfractures. At 530 ft bls, changed from 11 7/8" stratex system to 9 7/8" reverse circulation tricone bit.
535						7.5YR 6/2	S	Pinkish gray limestone, micritic; rare small (1-2 mm) spots of sparry calcite; trace orange clayey limonite very locally in microfractures.
540						7.5YR 6/2	S	Pinkish gray limestone, faintly oolitic; few clear calcite microveinlets and hairline orange hematite microfracture fillings, occasionally with black opaque spotty oxides. Few orange clay balls.

Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
550	Upper Mural Limestone					7.5YR 7/1	S	Light gray limestone, faint granular texture, some fine oolitic textures locally; 1% intergrown gray chert; weak limonite stain along a few microfractures. Few shell fragments and microfractures at 557'. Orange limonitic clay on fractures at 558'.
560						5YR 6/4	S	Light reddish brown limestone. Broken up, small chips, some stuck together with reddish yellow calcareous clay balls.
570						10YR 7/3	S	Very pale brown mix of limestone as above, clay and few clayey fine-grained sandstone chips. Bottom of limestone; top of claystone-siltstone sequence maybe the boundary between Upper and Lower Mural Limestone. Gougey; maybe faulting or slip along the limestone-clastic rock contact. Clay is mottled
575	Lower Mural Limestone					7.5YR 6/3	S	Light brown fine-grained silty sandstone and clay; clay may be generated from drilling or from pre-existing fracturing. Possibly Lower Mural Limestone.
580						2.5Y 6/4	S	Light yellowish brown soft calcareous clayey siltstone and mudstone; finely broken either by drilling process or tectonic activity.
590						2.5Y 7/3	S	Pale yellow calcareous clay-silt-fine sand mudstone. Broken and clayey as above.
595						2.5Y 6/3	S	Light yellowish brown mudstone (indurated clay, silt, fine-grained sand); combination of fairly hard silty sand layers and soft clay-rich layers; calcareous. Weak limonite stain on fracture surfaces indicates rock fractured prior to drilling.
600						10YR 5/1	S	Gray claystone, with few scattered yellow spots and reddish streaks. Soft and malleable like modeling clay when wet.
604						10YR 7/2	S	Light gray calcareous mudstone (clay, silt, fine-grained sand) with few limonitic microfractures and rare black fine dendrites.
610						10YR 7/2 10YR 6/4	S	Light gray calcareous clayey siltstone chips and light yellowish brown soft clay mix. May represent interbedded siltstone and softer claystone.
620						2.5Y 7/3	M	Pale yellow clayey calcareous siltstone.
630						2.5Y 7/3	M	Pale yellow clayey calcareous siltstone; as above.

Project Name: **Bisbee Mitigation Order** Boring No.: **BMO-2008-13B**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
640	Lower Mural Limestone					2.5Y 8/2 2.5YR 7/3	M	Pale yellow clayey calcareous siltstone and mudstone. Few small =5 mm maroon spots, few small black dendrites on fractures, trace calcite veinlets.
650						10YR 6/1	S	Gray granular sandy limestone. Crystalline limestone with fine oolites; sandy limestone with quartz, red jasperoid, dark opaque, and green fine sand grains; grading to calcareous fine-grained arkose.
660						2.5YR 6/3 5YR 7/2		Light yellowish brown to brown and pale yellow clayey siltstone (80%) and pinkish gray limestone (20%). Limestone has some gray shell fragments and small patches of crystalline calcite. Limonite in microfractures are present locally in the siltstones.
670						10YR 6/1 2.5Y 7/4	M	Gray fine-grained calcareous arkose (50%) and pale yellow calcareous siltstone (50%).
672						10YR 6/1	M	Gray fine-grained calcareous arkose.
679						2.5Y 5/1	S	Gray soft claystone, forms sticky clay when ground by drilling; repeatedly plugged bit and crossover.
680						2.5Y 6/3 5 YR 6/2	S	Light yellowish brown siltstone and claystone, with a small amount of pinkish gray siltstone. Pinkish gray siltstone chips may represent pinkish patches within the more generally yellowish brown strata.
685						2.5Y 6/3 10YR 7/3	S	80% light yellowish brown calcareous siltstone and 20% very pale brown limestone. Limestone has shell fragments and local recrystallized calcite patches. Few pinkish gray siltstone chips also present in sample.
690						2.5Y 7/3	S	Pale yellow calcareous clayey siltstone.
696						2.5Y 7/3	S	Pale yellow calcareous soft, sticky claystone and pale yellow siltstone.
700						2.5Y 7/3 2.5Y 6/2	S	Pale yellow calcareous claystone and light brownish gray siltstone and very fine-grained silty sandstone. The clay/claystone is soft, sticky, and repeatedly plugged up the bit and drill pipe. **TD = 700 ft bls on 8/24/08. Hole caved, bottom 180 ft abandoned.**

Depth (Ft)	Graphic Log	Estimated % GR	SA	FI	USCS Symbol	Munsell Color	HCl Rxn	Sample Description
10	Basin Fill	60	25	15	GM	7.5YR 8/2	S	Pinkish white silty gravel with sand, well-cemented with hard caliche. Gravel fraction is composed of angular clasts of gray to brownish gray micritic to granular limestone with rare chert. Gravel is in caliche matrix composed of calcium carbonate cemented sand, silt and little clay. Caliche is hard, breaking to angular chunks during drilling. Sand is fine to coarse-grained quartz and lithic grains.
20		5	10	85	CL	5 YR 6/4	S	Light reddish brown calcareous silty clay; well-compacted, passed through cyclone as cohesive chunks.
30		20	45	35	SC	5YR 8/3	S	Pink clayey sand with gravel, moderately well-cemented with caliche. Gravel is =2 cm, composed primarily of angular to subangular gray limestone clasts with few white quartzite clasts. Sand is fine to coarse-grained quartz and lithic grains. Caliche matrix varies from hard with crystalline calcite to clayey and friable.
40		50	25	25	GC	5YR 7/4	S	Pink clayey gravel with sand, moderately well-cemented with caliche. Gravel is =3 cm diameter, mostly gray micritic limestone with little oolitic limestone, with lesser amounts of reddish brown siltstone, greenish gray fine-grained sandstone, white quartzite and rare milky quartz. Sand as above; caliche as above.
50		15	50	35	SC	5 YR 8/4	S	Pink clayey and silty sand with gravel, moderately well- cemented with caliche. Gravel is subangular to subrounded limestone and clastic pebbles =1 cm diameter. Sand is fine to coarse-grained in clayey silty carbonate matrix. Caliche varies from hard crystalline calcite cement to softer friable material with swelling clays.
60		65	20	15	GM	5YR 7/2	S	Pinkish gray silty gravel with sand, moderately to well cemented by crystalline to soft clayey caliche. Gravel is angular to rounded, =2 cm diameter, primarily gray limestone, greenish gray fine grained sandstone with small amounts of quartz and siltstone. Sand is fine to coarse-grained quartz and lithic grains.
70		10	50	40	SC	5YR 6/3	S	Light reddish brown clayey sand. Gravel as above; sand is fine to coarse-grained, poorly graded quartz and lithic grains. Clay matrix is calcareous, swelling when wet. Few caliche (calcite, clay, fine sand mix) coatings on gravel.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
80	Basin Fill	60	20	20	GC	2.5YR 7/3	S	Light reddish brown clayey gravel with sand. Gravel is primarily gray limestone with some yellow recrystallized limestone with disseminated oxidized pyrite, and few reddish brown siltstone, green siltstone and milky quartz clasts. Fine carbonate-silt sand coatings on some surfaces. Sand is coarse to fine-grained, poorly graded, quartz and lithic grains.
90		35	45	20	SM	2.5YR 7/2 2.5YR 6/2	S	Pale red silty sand with gravel. Gravel is angular to subangular clasts =2 cm diameter with a few =1 cm rounded pebbles. Gravel clasts are a mix of gray sandstone, greenish yellow and reddish brown siltstone, gray limestone, and trace phyllite and quartz, compositional change relative to previous intervals marked by decreased limestone, increased clastics, appearance of gray sandstone and phyllite. Pink caliche coatings on many faces. Sand is predominately lithic grains, fine to coarse grained, moderately well-graded.
100		85	5	10	GP-GC	5YR 7/3	S	Pink gravel with clay. Pink color is imparted by calcareous clay matrix and of caliche coatings on the gravel clasts. Gravel is light to dark gray, greenish to pale red when washed; composed of gray limestones, gray sandstone, reddish brown siltstone, and fine-grained sandstone with trace phyllite, black chert, and epidote-chlorite-calcite clasts (in order of decreasing abundance).
110		65	20	15	GC	2.5YR 7/3	S	Light reddish brown clayey gravel with sand. Gravel is mostly is =2.5 cm, oblong to equidimensional, grading to coarse sand. Clasts are angular to subrounded, with subrounded material being finer pebbles. Sand is coarse to fine-grained. Caliche chunks generated during drilling are 10% of the sample gravel fraction. Gravel composition is as previous interval.
120		65	20	15	GC	2.5YR 7/2	S	Pale red clayey gravel with sand. Gravel clasts are angular to subrounded, =4 cm on long side oblong to equidimensional, composed primarily of gray limestone and fine-grained brownish gray sandstone with lesser amounts of chert, and Pinal Schist-derived phyllite and metamorphic quartz. Sand is coarse to fine-grained, with coarser sand mostly lithic grains and fine sand mostly quartz. Soft clayey to hard caliche matrix.
130		60	30	10	GP-GC	2.5YR 7/2	M	Pale red gravel with clay and sand. Pale red color is imparted by color of fines. Gravel and sand are mottled brown gray, green and white with few reds and yellow when washed. Gravel composition has changed relative to above intervals to primarily brown, gray, and green sandstone and siltstones, with some phyllite and little limestone. Gravel is angular to rounded = 1 cm diameter, some with calcite-sand-clay coatings. HCl reaction strong in fine fraction; moderate in sand and gravel.
140		85	10	5	GP	2.5YR 6/3	S	Light reddish brown gravel. Gravel composition is as above but coarser, up to 4 cm on long side; mostly angular to subangular; calcite-sand cement coatings are common.
150		65	25	10	GP-GM	5YR 6/3	S	Pale red gravel with silt and sand. Clasts are = 3 cm, angular to rounded, composed of sandstone, siltstone, phyllite, metamorphic quartz, and limestone. Calcite-fine sand coatings on some surfaces. Sand is coarse to fine-grained, composed of quartz and lithic grains.
160		50	35	15	GM	2.5YR 6/3	S	Light reddish brown silty gravel with sand. As above with larger sand fraction.

		GR	**SA**	**FI**				
170	Basin Fill	70	15	15	GC	2.5YR 7/3	S	Light reddish brown clayey and silty gravel with sand. Clasts are up to 3 cm on long side, but most are =1 cm; angular to rounded, composed of gray to brown sandstone, siltstone, limestone, phyllite, and chert; some calcite-sand cement coatings. Sand as above.
180		60	20	20	GC	2.5YR 6.3	S	Light reddish brown clayey and silty gravel with sand. As above with little green siltstone and sandstone clasts in addition.
190		45	35	20	GC	2.5YR 6/3	S	Light reddish brown clayey and silty gravel with sand; clay-calcite-fine sand cement. Gravel clasts are mostly =1.5 cm, angular to subrounded; abundant subrounded pebbles, composition as above. Sand is fine to coarse-grained, angular to subrounded, composed of lithic grains and quartz.
200		40	35	25	GC	2.5YR 6/3	S	Light reddish brown clayey gravel with sand, caliche-like cement chunks generated by drilling and as coatings on some gravel clasts. As above but gravel is finer, with most clasts = 1 cm. Sand as above.
210		80	10	15	GC	2.5YR 6/3	S	Light reddish brown clayey gravel. Gravel clasts are subangular to subrounded, equidimensional to oblong, up to 4 cm on long side. Caliche-like cement and coatings on some surfaces. Gravel composition continues to be primarily clastics with lesser limestone, phyllite, quartz, and rare chert. Sand as above.
220		35	45	20	SC	2.5YR 6/3	S	Light reddish brown clayey sand with gravel. Gravel clasts are angular to subrounded, up to 2 cm diameter, but mostly =1 cm, grading to coarse sand. Calcite-sand cement coatings. Gravel composition is variably colored sandstone and siltstone, with lesser gray limestone, phyllite and quartz. Sand as above.
230		50	30	20	GC	2.5YR 7/3	S	Light reddish brown clayey gravel with sand. Gravel and sand as above with trace light gray speckled limestone clasts in addition; calcite-sand cement coatings.
240		50	30	20	GC	2.5YR 6/3	S	Light reddish brown clayey gravel with sand. Gravel clasts are up to 3 cm, but mostly =1 cm pebbles; angular to subrounded sandstone, siltstones, gray and brown limestone, phyllite, quartz, and fine fossiliferous brown and gray limestone; calcite-fine sand cement coatings. Sand as above.
250		60	30	10	GP-GC	2.5YR 6/2	M	Pale red gravel with clay and sand. Gravel is =1 cm in diameter, angular to subrounded; lithologic composition as above. Sand as above.
260		55	40	5	GP	2.5 YR 6/2	M	Pale red gravel with sand. As above.
270		65	30	5	GP	2.5YR 6/2	M	Pale red gravel with sand. Gravel clasts are =2 cm diameter, angular to rounded, composed of variably colored sandstones with lesser siltstone, light gray micritic to black crystalline limestone, phyllite and quartz derived from Pinal Schist, and grayish brown chert. Sand as above. Calcite-fine sand cement coatings on some clasts.
280		45	50	5	SP	2.5YR 6/1, 6/2. 6/3	M	Mottled reddish gray, pale red, and light reddish brown sand with gravel. Gravel =2 cm, angular to subangular. Sand coarse to fine lithic grains and lesser quartz. Calcite sand cement on gravel clasts.

290	Basin Fill	65	30	5	GP	2.5YR 6/1, 6/2,6/3	M	Mottled reddish gray, pale red, and light reddish brown gravel with sand. Gravel and sand fractions as above.
300		45	50	5	SP	2.5YR 6/3	M	Light reddish brown sand with gravel. Gravel to 2 cm, mottled reddish gray, pale red to light reddish brown; angular to subrounded, sandstone, limestone, phyllite, and siltstone clasts; local calcite-sand cement coatings. Sand fine to coarse lithic grains and quartz.
310		65	30	5	GP	2.5 YR 6/3	M	Light reddish brown gravel with sand. Gravel is mottled reddish gray, pale red to light reddish brown; = 2 cm diameter; angular to subrounded sandstone, phyllite, limestone, siltstone, and quartz clasts. Sand as above.
320		65	30	5	GP	2.5YR 6/3	M	Light reddish brown gravel with sand. Gravel is mottled pinkish white, light reddish gray, pale red to light reddish brown sandstone, phyllite, quartz, limestone, and siltstone. Sand as above. Calcite-fine sand cement.
330		60	30	10	GP-GM	2.5YR 6/3	M	Light reddish brown gravel with silt and sand. Gravel is angular to rounded, mostly subangular =2 cm clasts of sandstone, quartzite, limestone, siltstone, phyllite, and quartz. Sand as above. Calcite-fine sand cement.
340		65	30	5	GP	2.5YR 6/3	M	Light reddish brown gravel with sand. Gravel angular and subrounded with minor rounded gray limestones, arkosic sandstone, fine-grain greenish gray quartzite, Pinal Schist phyllite, and metamorphic quartz; calcite sand coatings. Sand as above.
350		65	30	5	GP	2.5YR 6/3	M	Light reddish brown gravel with sand. Polymictic gravel composed of quartz, sandstone, siltstones, limestones, and Pinal Schist derivatives. Calcite-sand cement. Sand as above.
360		65	30	5	GP	2.5YR 6/3	M	Light reddish brown gravel with sand. Gravel is mottled reddish gray, pale red, reddish brown; composed of limestone, sandstone, siltstone, Pinal Schist, and trace chert; =2 cm angular to subrounded clasts. Sand as above.
370		65	30	5	GP	2.5yr 6/3	M	Light reddish brown gravel with sand. Gravel is mottled reddish gray, gray, pale red, reddish brown to white; =2 cm diameter angular to subrounded clasts of sandstone, limestone, and Pinal Schist. Sand is coarse to fine-grained, well-graded; lithic grains with quartz in the finer sand fraction. Calcite-sand cement.
380		65	30	5	GP	2.5YR 5/2	M	Weak red gravel with sand; as above with a few yellowish brown calcareous sandstone clasts. Rig chatter indicates presence of some coarse cobbles.
390		65	25	10	GP-GM	2.5YR 6/2	M	Pale red gravel with silt and sand. Gravel clasts are gray, pale red to white; primarily limestone, Pinal Schist phyllite and quartz, with smaller amount of sandstone, and little siltstone. Rig chatter indicates presence of some cobbles. Sand as above.
400		65	25	10	GP-GM	2.5YR 6/2	M	Pale red gravel with silt and sand. Gravel clasts are pale red, light red dark gray, white and weak red; angular to subangular with few subrounded; composed primarily of sandstone and siltstone with lesser Pinal Schist and small amount of gray limestone. Calcite-fine sand cement coatings. Sand as above.

410	Basin Fill	70	25	5	GP	2.5YR 6/2	M	Pale red gravel with sand. Gravel coloration and composition as above; clasts = 3 cm, angular to rounded. Sand as above. Calcite sand cement.
420		65	25	10	GP-GM	2.5YR 6/2	M	Pale red gravel with silt and sand. Gravel coloration and composition as above with trace chert. Clasts are mostly =2 cm in diameter with the exception of a few 4 cm; clasts angular to subrounded; calcite-sand cement coatings.
430		70	25	5	GP	2.5YR 6/3	M	Light reddish brown gravel with sand. Gravel is mostly reddish gray to light reddish brown; = 2 cm diameter angular to subrounded clasts of Pinal Schist phyllite with lesser sandstone and little limestone. Sand as above; calcite-sand cement common.
440		65	25	10	GP-GM	2.5YR 6/2	M	Pale red gravel with silt and sand. Gravel is pale red, reddish gray, white, and light reddish brown; clasts = 2cm diameter, few angular with mostly subangular to rounded; few with calcite sand cement. Gravel lithologic composition as above. Sand as above.
450		65	25	10	GP-GM	2.5YR 6/2	W	Pale red gravel with silt and sand. Gravel clasts are = 2 cm diameter, oblong to equidimensional, angular to rounded; pale red, weak red to reddish brown with few white clasts; composed dominantly of Pinal Schist-derived phyllite and quartz, with lesser sandstone. Calcite-sand coatings. Sand as above. HCl reaction restricted to cement and fines.
460		50	35	15	GM	2.5YR 6/2	M	Pale red silty gravel with sand. Gravel is mostly = 2 cm diameter, colored as above with trace greenish gray; dominantly Pinal Schist with lesser sandstone, siltstone, and trace limestone. Lacks calcite-sand coatings as seen in previous intervals. Sand as above.
470		35	45	20	SM	2.5YR 6/3	M	Light reddish brown silty sand with gravel. Gravel fine = 1 cm with very few =2 cm clasts, angular to subrounded, composed primarily of phyllite and metamorphic quartz derived from Pinal Schist, sandstone, and siltstone clasts. Sand is coarse to fine-grained; well-graded, composed primarily of lithic grains and smaller amounts of quartz. Few calcite-sand coatings.
480		45	40	15	GM	2.5YR 6/2	M	Pale red silty gravel with sand. Gravel and sand characteristics as previous interval.
490		45	40	15	GM	2.5YR 6/3- 2.5YR 6/2	M	Light reddish brown to pale red silty gravel with sand. As above; few calcite-sand coatings.
500		40	45	15	SM	2.5YR 6/2	M	Pale red silty sand with gravel. Gravel is as above with some calcite-sand coatings. Sand is mostly coarse-grained, poorly graded. Sand is mostly phyllite lithic grains and quartz.
510		20	65	15	SM	2.5YR 6/2	M	Pale red silty sand with gravel. As above, with larger percentage of sand. Few clay balls.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
520	Upper Mural Limestone				bedrock	5YR 7/2	S	Pinkish gray limestone; bedrock. Sample contains about 15% Pinal Schist fine gravel and sand-sized lithic grains, which are likely washing down from above. Limestone has few orangish clay coatings in fractures. Possibly Mural Limestone.
530						7.5YR 7/2	S	Pinkish gray limestone. Fine grained, micritic, locally oolitic; fossiliferous with fine shell fragments. Localized fine breccia textures. Few orange microfractures.
540						7.5YR 7/1	S	Light gray limestone. Limestone is finely crystalline, with few calcite microfracture fillings; fine few mm smooth convex and pectin shell fossil fragments replaced by calcite. Trace very fine-grained oxidized disseminated pyrite. Small amount of sandstone of same color also present; may represent thin sandstone interbed within the limestone.
550						7.5YR 7/1	S	Light gray limestone, finely crystalline, calcite in hairline microfractures, few orange limonite-calcite 1 mm fracture fillings. Rare shell fragments. Trace disseminated partially oxidized disseminated pyrite. Basin fill sand is washing down from the uncased 240-520' zone, and mixing with the bedrock samples.
560						7.5YR 7/1	S	Light gray limestone, as above. Hairline to 1 mm wide orange to yellow limonite +/- calcite fracture fillings. No fossils. Orange microfractures are not as abundant or as clayey as those seen in BMO-2008-13B.
570						7.5YR 7/1	S	Light gray limestone, finely crystalline, no fossils observed. Few hairline fractures with maroon hematite fillings.
580						10YR 7/2	S	Light gray argillaceous limestone, with small shell fossil fragments replaced by clear calcite.
587						10YR 7/2	S	Light gray micritic limestone with some small relic fossil shell textures.
590						10 YR 6/1	S	Gray micritic limestone, with local patches of fine sparry recrystallization. Rare small fossil shell textures.
600						10 YR 6/2	S	Light brownish gray limestone, micritic to finely crystalline, slightly argillaceous; few small shell fragments.
605						7.5YR 7/1	S	Light gray micritic limestone with = 1 mm orange limonite-clay-calcite microveinlets.
607						10YR 6/2	S	Light brownish gray limestone. Rare =1 mm fractures filled with orange to white calcite.
610						7.5YR 6/1 10YR 7/3	S	Mixed very pale brown argillaceous limestone with shell fragments and gray micritic limestone with no fossils.
612						7.5YR 5/1	S	Uniform gray micritic limestone, slightly argillaceous, with few small fossil shell fragments replaced by clear calcite.
614						7.5YR 5/1 - 7.5YR 6/2	S	Gray granular textured to light brown micritic limestone, few orange calcite-clay fracture fillings up to 2 mm wide.
616						7.5YR 5/1	S	Gray micritic to fine crystalline limestone, slightly argillaceous; few white calcareous clay fracture coatings.
620						7.5YR 6/1	S	Gray fine granular textured limestone with abundant small shell fragments replaced by clear calcite.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
626	Lower Mural Limestone					5 Y 5/1	S	Gray clay and little gray claystone. Material is mostly soft sticky plastic clay with few soft claystone chips. Little black disseminated free carbon which floats on top of water once liberated during drilling. This interval may be the top of the Lower Mural Limestone.
630						2.5YR 5/1	S	Gray calcareous mudstone. Mostly silty claystone with some local fine sandy silty claystone (mudstone).
639						2.5YR 5/1	S	Gray calcareous mudstone; mostly silty clay with local very fine sand.
640						2.5Y 6/1	S	Gray muddy limestone with few shell fragments and calcareous gray clay and soft claystone.
646						2.5Y 5/1	S	Gray mudstone. Clayey layers soft; silty sandy, hard gray calcareous mudstone.
650						2.5YR 5/1	S	Gray calcareous mudstone clayey and siltstone with very fine sand; clay balls, soft claystone.
651						GLEY1 5/N	S	As above with less clay and more very fine-grained sand.
657						GLEY1 5/N	S	Gray calcareous mudstone as above.
660						GLEY1 6/1	S	Gray calcareous mudstone; mostly clay and silt, less sandy than above.
670						2.5YR 6/2 to 6/3	S	Light brownish gray to light yellowish brown, strongly calcareous fine-grained sandstone and sandy siltstone, to sandy limestone.
680						10YR 6/1	W	Gray fine-grained arkosic sandstone; slightly argillaceous, calcareous matrix.
684						2.5Y 8/2	M	Pale yellow fine-grained arkosic sandstone and clayey silty fine-grained sandstone/mudstone.
689						10 YR 6/1	M	Gray fine-grained arkosic sandstone. Sand is quartz with few red black and rare green opaques; argillaceous, calcareous matrix.
690						2.5Y 7/1	S	Light gray clayey arkosic fine-grained sandstone. As above with greater clay content. Probably arkosic sandstone as above with thin more argillaceous lamina.
700						2.5 Y 5/1	M	Gray mudstone, from soft claystone to harder silty and fine sandy claystone. Moderately calcareous; carbonaceous.
703						2.5Y 6/2	S	Light brownish gray calcareous clay, claystone, clayey siltstone finely interlaminated.
708						2.5Y 7/2, 2.5Y7/3	S	Light gray to pale yellow limestone with abundant small shell fragments replaced by clear to reddish yellow crystalline calcite.
710						5y6/2	M	Light olive gray calcareous claystone, silty claystone, and clay balls.
712						2.5Y 6/3	M	Light brownish gray argillaceous calcareous fine-grained arkosic sandstone with little siltstone, few small gray shell fragments.
714						2.5Y 8/2	S	Pale yellow mudstone, varying ratios of clay, silt and sand.
720						2.5Y 8/2	S	Pale yellow sandy mudstone. Sand grains are fine-grained, supported in a matrix of clay and silt.
722						10YR 8/2 to 5YR 7/2, 2.5YR 7/2	M	Pale brown to pinkish gray fine-grained quartz sandstone. Sand grains are well sorted, calcite cement. Sandstone bed from 722 - 729 ft bls.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
730	Lower Mural Limestone					2.5Y 8/3	M	Pale yellow mudstone composed of clay, silt, and sand, grading to argillaceous silty sandstone.
731						10R 8/3	M	Pink quartz sandstone, fine to medium-grained, calcareous cement.
735						2.5YR 7/2	M	Pale red quartz sandstone, fine-grained calcite cement.
740						2.5Y 8/1	M	Pale yellow clayey, silty sandstone; fine-grained, calcareous argillaceous matrix.
743						10YR 8/2	W	Very pale brown fine-grained sandstone, argillaceous calcareous matrix.
750						5Y 6/1	W	Gray mudstone, moderately soft when wet, composed of fine sand, silt and clay, and sandy siltstone.
760						2.5Y 5/1	W	Gray mudstone, soft clayey with soft and locally fine sand, carbonaceous. Free fine carbon floats on water in hopper after liberation during the drilling process. Silty layers are more HCl-reactive than clayey material.
770						5Y 5/1	W	Gray mudstone, clay, claystone and clayey siltstone; carbonaceous. Locally carbon can be seen concentrated along fine laminae.
780						GLEY1 5/N	M	Gray calcareous, carbonaceous, silty fine-grained sandstone (80%) and 20% pink fine-grained sandstone (20%).
784.5						GLEY1 5/N	M	Gray calcareous fine-grained sandstone with 1 mm white calcite veinlets. Siltstone bed with carbon flecks that appear to be fine plant fragments at 789.
790						GLEY1 5/N	W	Gray carbonaceous soft claystone.
793						GLEY1 5/N	W	Gray carbonaceous mudstone composed of clay, silt and fine sand.
799						GLEY1 6/N	S	Gray muddy limestone with shell fragments.
800						GLEY1 5/N	M	Gray clayey carbonaceous calcareous siltstone. Visible fine carbon fragments.
810						GLEY1 4/N	M	Dark gray carbonaceous calcareous claystone, moderately soft; sample is mixed claystone chips and clay balls formed during drilling; some silty claystone also present.
820						5 Y 5/1	M	Gray carbonaceous calcareous claystone to fine-grained sandy mudstone. Claystone and clay balls more HCl-reactive than the sandy mudstone.
830						GLEY1 5/N	M	Gray claystone to silty claystone; calcareous, carbonaceous. Few chips of pale yellow limestone.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
840	Lower Mural Limestone					GLEY1 5/N	S	Gray calcareous siltstone to mudstone.
841						GLEY1 4/1	S	Gray carbonaceous clayey limestone with shell fragments.
845						GLEY1 4/1	S	Gray argillaceous limestone to calcareous clayey siltstone with scattered shell fragments.
850						GLEY1 5/N	S	Gray carbonaceous calcareous clayey siltstone to claystone.
860						GLEY1 5/N	S	Gray clay and claystone. Clay 80-90% of sample, is very soft, plastic, sticky, cohesive, calcareous. Claystone is soft, slightly platy.
865						GLEY1 5/N	S	Gray clay, claystone, silty claystone, sandy mudstone.
870						GLEY1 5/N	S	As above.
875						GLEY1 5/N	S	As above, clay content has decreased to about 10% of sample. Very small amount of a fine-grained reddish sandstone, calcareous cement.
880						GLEY1 5/N	S	Gray silty claystone, clay, and fine-grained clayey quartz sandstone.
885						GLEY 1 5/N	S	Gray claystone, clay, little siltstone. Claystone soft, platy, calcareous; 30% clay fraction soft, plastic, cohesive, calcareous.
890						GLEY1 5/N	S	Gray calcareous fine-grained sandstone to fine sandy limestone; hard.
895						GLEY1 5/N	S	Gray claystone, clay, and clayey siltstone, mudstone. Claystone soft, slightly platy, calcareous. 15% clay fraction soft, moderately plastic, cohesive.
900						GLEY1 5/N	M	Gray quartz sandstone, fine-grained, calcareous cement, hard; and some fine sandy limestone.
905						GLEY1 6/N	M	Gray fine sandy mudstone, siltstone, claystone, clay, little sandstone; calcareous cementation. 5-10% soft, sticky, moderately plastic clay.
910						GLEY1 6/N	M	Interbedded gray sandstone, sandy siltstone with some clay; small amount of sandy limestone.
915						GLEY1 5/N	M	Gray silty, sandy claystone (mudstone). Sand fraction very fine-grained, fairly hard, calcareous cementation.
920						GLEY1 5/N	M	Gray clay, claystone, silty claystone. Claystone soft, calcareous; 30-40% clay soft moderately plastic, cohesive.
925						GLEY1 5/N	M	As above, 40% fine-grained, hard gray limey sandstone to sandy limestone.
930						GLEY1 5/N	M	Gray clay, claystone, silty claystone and sandstone; sandstone fine-grained with calcareous cement; hard.
935						GLEY1 5/N	S	Gray sandstone. Fine-grained, hard, composed primarily of quartz grains with calcareous cementation.
940						GLEY1 5/N	S	Interbedded gray sandstone, mudstone, calcareous claystone. 10% calcareous clay, very soft, plastic, cohesive.
945						GLEY1 6/N	S	Gray fine-grained calcareous sandstone, siltstone, little limestone and silty limestone. Well-indurated.

Project Name:	Bisbee Mitigation Order							Boring No.: BMO-2008-13M
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
950	Lower Mural Limestone					GLEY1 6/N	S	Gray fine-grained, well-indurated quartz sandstone with calcareous cement and trace carbonaceous material along laminae. 10% soft gray mudstone and 3% pink sandstone.
960						GLEY1 6/N	M	Gray siltstone, claystone, argillaceous limestone, sandstone and little clay. 2-3% soft, moderately plastic, calcareous clay.
970						GLEY1 6/N	S	Gray mudstone and clay. Mudstone soft, calcareous; 25% soft plastic, cohesive, calcareous clay.
980								As above.
985						7.5YR 6/1	M	Gray sandstone, fined-grained, hard, calcareous, mostly quartz grains with few white and black opaque grains.
990						7.5YR 6/1	M	Gray fine-grained quartz sandstone, calcareous cement.
1000						GLEY1 5/N	M	Gray claystone, silty claystone; soft, slightly platy, with calcareous cement; 20% very soft, moderately plastic, cohesive, calcareous clay; trace reddish brown sandstone, .
1005						GLEY1 7/N	M	Light gray arkosic fine-grained sandstone, well-indurated, hard, calcareous cement.
1010						GLEY1 7/N	M	Light gray to gray, fine-grained sandstone with calcareous cement.
						GLEY1 5/N	M	
1015						GLEY1 5/N	M	Gray fine-grained sandstone with calcareous cement; soft siltstone silty claystone with calcareous cement; 15% very soft, moderately plastic, cohesive, calcareous clay.
1020						GLEY1 5/N	M	Gray, moderately soft, sandy clay-rich, calcareous mudstone.
1025						GLEY1 5/N	M	Gray clay, soft, plastic, cohesive, calcareous; silty claystone; trace limestone and pink sandstone.
1030						GLEY1 5/N	M	Gray fine-grained, hard, calcareous sandstone.
1035						2.5YR 7/1	M	Light gray, fine-grained, calcareous sandstone; hard; little dark gray laminated, platy, calcareous claystone.
1040						2.5YR 7/1	M	Light gray, fine-grained, well-indurated, calcareous sandstone and 10% dark gray, very soft, plastic, cohesive, calcareous clay.
						GLEY1 4/N	M	
1045						2.5YR 7/1	M	As above, with slightly less clay.
						GLEY1 4/N		
1050						2.5YR 7/1	M	Interbedded, light gray, hard, fine-grained, calcareous, sandstone; moderately soft, calcareous siltstone and claystone; very soft, moderately plastic, cohesive clay.
1055						2.5YR 7/1	M	As above.

Project Name:	Bisbee Mitigation Order					Boring No.: BMO-2008-13M		
Depth (Ft)	**Graphic Log**	**Estimated %**			**USCS Symbol**	**Munsell Color**	**HCl Rxn**	**Sample Description**
		GR	**SA**	**FI**				
1060	Lower Mural Limestone					2.5YR 7/1	M	Interbedded, light to dark gray, claystone, siltstone, and sandstone, with soft, moderately plastic, cohesive clay.
						GLEY 4/N		
1065						GLEY 4/N	S	Dark gray, soft; plastic, cohesive, sticky, calcareous clay with some mudstone and claystone.
1070						GLEY 4/N	S	Dark gray clay, claystone, and 20% fine-grained, calcareous sandstone.
1075						GLEY 4/N	M	Dark gray, hard, fine-grained, calcareous sandstone.
1080						GLEY 5/N	S	Gray mudstone; with 30% gray well-indurated fine-grained, calcareous sandstone and 20% gray limestone.
1090						GLEY 5/N	S	Gray calcareous, claystone, and limey cherty, with small amount of clay.
1095	Morita Formation					GLEY1 6/N	M	Gray very fine-grained, well-indurated, calcareous sandstone. May be top of Morita Formation
1100						2.5YR5/1	M	Reddish gray to gray calcareous sandstone; probably Morita Formation.
								TD = 1100 ft bls at 10:00 on 11/11/2008.

Notes:

ft bls = feet below land surface

SU = Standard units

µS/cm = microsiemens per centimeter

° C = Degrees Celsius

ppm = parts per million

mg/L = milligrams per liter

Field sulfate measurements conducted with an Orion AQ4000 Colorimeter

APPENDIX M

WELL CONSTRUCTION SUMMARIES FOR BMO-2008 WELLS

HYDRO GEO CHEM, INC.

Well Construction Summary

Project Name:	**Bisbee Mitigation Order**			Boring No.:	**BMO-2008-1G**
Drilling Co.:	WDC Exploration and Wells			Project No.:	872000
ADWR Well No.:	**55-909474**	Driller:	William Berg	Geologist	Kim Wilson
UTM Location:	3467919.582 N	602012.923 E	Elevation:	4583.97 ft	NAD83/NAVD88

DRILLING SUMMARY

Total Depth:	320 ft bls	Hole Diameter:	12" to 230', 8.5" to 320'
Drill Rig:	GEFCO Speedstar 50K-CH	Drill bit/Type:	Stratex to 230', Tricone to 320'

WELL CONSTRUCTION DATA

Type of Material	Depth Interval (ft bls)		Description
	From	To	
Casing	0	180	5" steel, ASTM A53-B
Well Screen	180	300	5" steel, 0.125" slots
Sump	300	310	5" steel, ASTM A53-B
Centralizer Locations	150	300	4 @ 50' ft intervals along screen
Cement Grout	0	20	Type II Portland Cement
Bentonite Grout	20	147	High-solids bentonite grout
Bentonite Pellets	147	160	Coated time release pellets
FineTransition Sand	160	165	No. 60 Sand
CoarseTransition Sand	165	170	8x12 Sand
Filter Pack	170	320	#8 Tacna

CONSTRUCTION TIME LOG

TASK	Start		Finish	
	Date	Time	Date	Time
Drilling	29-Jul-08	10:08	31-Jul-08	12:59
Casing	5-Aug-08	15:40	6-Aug-08	13:35
Filter Pack	6-Aug-08	14:22	8-Aug-08	9:42
Bentonite Pellets	8-Aug-08	9:44	8-Aug-08	10:23
Bentonite Grout	8-Aug-08	10:45	8-Aug-08	15:15
Cement	9-Aug-08	10:30	9-Aug-08	10:45

AIRLIFT WELL DEVELOPMENT

Date & Time Started:	9-Aug-08 7:25	Flow Rate in gallons per minute:	8
Date & Time Completed:	9-Aug-08 9:25	Static water level in feet bls:	61
Duration in minutes:	120	Gallons Purged:	970

Remarks:

HYDRO GEO CHEM, INC.

Well Construction Summary

Project Name:	**Bisbee Mitigation Order**			Boring No.:	**BMO-2008-3B**
Drilling Co.:	WDC Exploration and Wells			Project No.:	872000
ADWR Well No.:	**55-909147**	Driller:	Arnold Lamon	Geologist:	Warren Thompson
UTM Location:	3472626.482 N	606800.995 E	Elevation:	4844.67 ft	NAD83/NAVD88

DRILLING SUMMARY

Total Depth:	590 ft bls	Hole Diameter:	12" to 165', 10" to 195', 8.5" to 590'
Drill Rig:	GEFCO Speedstar 50K-CH	Drill bit/Type:	Stratex to 165', ARCH to 195', Tricone to 590'

WELL CONSTRUCTION DATA

Type of Material	Depth Interval (ft bls)		Description
	From	To	
Casing	0	150	5" steel, ASTM A53-B
Well Screen	150	250	5" steel, 0.125" slots
Sump	250	260	5" steel, ASTM A53-B
Centralizer Locations	150	250	3 @ 50' ft intervals along screen
Cement Grout	0	20	Type II Portland Cement
Bentonite Grout	20	120	High-solids bentonite grout
Bentonite Chips	120	130	Medium chips
FineTransition Sand	130	135	No. 60 Sand
CoarseTransition Sand	135	140	8x12 Sand
Filter Pack	140	272	#8 Tacna
Bentonite Chips	272	590	Borehole abandonment

CONSTRUCTION TIME LOG

TASK	Start		Finish	
	Date	Time	Date	Time

AIRLIFT WELL DEVELOPMENT

Date & Time Started:	5/28/2008 7:54	Flow Rate in gallons per minute:	200
Date & Time Completed:	5/28/2008 9:05	Static water level in feet bls:	263.98
Duration in minutes:	69	Gallons Purged:	13,800

Remarks:

HYDRO GEO CHEM, INC.

Well Construction Summary

Project Name:	**Bisbee Mitigation Order**			Boring No.:	**BMO-2008-7M**
Drilling Co.:	WDC Exploration and Wells			Project No.:	872000
ADWR Well No.:	**55-908794**	Driller:	Arnold Lamon	Geologist:	Kim Wilson
UTM Location:	3470029.282 N	603099.165 E	Elevation:	4688.33 ft	NAD83/NAVD88

DRILLING SUMMARY

Total Depth:	750' bls	Hole Diameter:	12" to 350', 10" to 680', 8" to 750'
Drill Rig:	GEFCO Speedstar 50K-CH	Drill bit/Type:	Stratex to 540', Tricone to 750' *

WELL CONSTRUCTION DATA

Type of Material	Depth Interval (ft bls)		Description
	From	To	
Casing	0	560	5" steel, ASTM A53-B
Well Screen	560	660	5" steel, 0.125" slots
Sump	660	670	5" steel, ASTM A53-B
Centralizer Locations	550	650	3 @ 50' ft intervals along screen
Cement Grout	0	20	Type II Portland Cement
Bentonite Grout	20	523	High-solids bentonite grout
Bentonite Pellets	523	537	Coated time release pellets
FineTransition Sand	537	543	No. 60 Sand
CoarseTransition Sand	543	549	8x12 Sand
Filter Pack	549	680	#8 Tacna
Bentonite Chips	680	693	Lower seal
Gravel Backfill	693	750

1. HYDRAULIC TESTING

This section describes the performance, analysis, and results of hydraulic tests conducted at the BMO-2008-Series (BMO-Series) groundwater monitoring wells and well nests installed under Task 2.3, and the selected pre-existing wells under Task 2.4 of the Work Plan (HGC, 2008). Locations of the tested wells are shown in Figures 8 and 10 and construction details are summarized in Table 13 of the main text. A detailed description of each well is provided in the well installation section of the report (Section 3.4 of the main text). Geologic logs for the BMO-2008-Series wells are in Appendix J of the main text.

The purpose of hydraulic testing was to evaluate aquifer hydraulic properties, including transmissivity, storage coefficient, and where possible, vertical hydraulic conductivity in the vicinity of each well. Hydraulic testing was conducted using the procedures described in the Work Plan. Most tests were conducted at multiple pumping rates (thereby constituting step rate tests), to enable evaluation of pumping well efficiency parameters. Pumping well efficiency parameters quantify the proportion of drawdown in the pumped well that is due to resistance to flow into the well bore and include non-linear head losses related to flow through well screen slots. In some cases, especially where the permeability of the aquifer is relatively high, the drawdown in the well is dominated by these head losses. This effect is illustrated in Figure N.1.

Hydraulic testing was conducted at each BMO-2008 well installed for Task 2.3 as described in the Work Plan (HGC, 2008). During hydraulic testing of the BMO-2008 wells, a water sample from each well was collected and analyzed for sulfate and a suite of major

elements as an initial characterization of water quality. The results of the initial sampling of the BMO-2008 wells are included in Table 11 of the main text.

1.1 Selection of Existing Wells

Hydraulic testing of wells existing prior to the installation of the BMO-Series well for Task 2.4 was conducted to develop additional hydraulic properties data for aquifer characterization. Testing at the existing wells required identifying appropriate and accessible wells. Wells identified by the well inventory (Section 3.1 of the main text) were screened to eliminate previously tested wells, dry wells, and wells that were inappropriate due to obstructions, a lack of access ports, or lack of a permanent cap. Additionally, wells were eliminated from testing if they were screened across more than a single geologic formation or if the geologic formation of the screened interval was unknown. Although there were a large number of potential wells considered, hydraulic testing was not practical at the majority of them because of difficulty obtaining access, the inability to interrupt water supply pumping, or construction characteristics that made the well poorly suited to hydraulic testing.

Five existing wells were selected for hydraulic testing: COB MW-1 (hereafter referred to as MW-1), GARNER 635, TM-02A, NWC-03, and TVI-875. MW-1 was chosen because it is a basin fill well near the location of BMO-2008-7M. GARNER 635 and TM-02A were chosen to test the Cintura and Morita Formations near the leading edge and source area of the sulfate plume, respectively. NWC-03 and TVI-875 were selected because they are in basin fill at the leading edge of the sulfate plume and have nearby wells that were used as observation wells.

1.2 Hydraulic Test Procedures

Hydraulic tests at the BMO-2008-series wells and the selected existing wells consisted of step-rate pumping of the well, measuring the pumping rates, and measuring the water levels in the pumping well and nearby observation wells (where available) before, during, and after pumping. Constant-rate pumping was performed when step-rate pumping was not practical. Observation wells consisted of other newly installed co-located wells, or existing nearby wells, that were screened at intervals deeper or shallower than the pumped well, often within a different hydrologic unit than the pumped well. For example, one well may have been completed in the basin fill and the other in the underlying bedrock at a particular location. Barometric pressure was also measured during each test to allow correction for any barometrically induced water level changes. Collected data were analyzed to estimate pumped well efficiency parameters and aquifer hydraulic properties in the vicinities of the well nests. Hereafter, for convenience, wells will be referred to using a shortened designation, for example BMO-6B, rather than BMO-2008-6B.

1.3 Pumping Procedures

Hydraulic tests were conducted subsequent to development of each new well. A sufficient time was allowed between well development and testing to allow recovery after development. Submersible pumps for testing BMO-series wells were supplied, deployed, and operated by Verdad Group, LLC. Testing at existing wells was conducted using the dedicated submersible pumps in the wells. Each well (except MW-1, TM-02A, GARNER 635, NWC-03, and TVI-875) was pumped at multiple, increasing, rates to allow analysis of pumping well

efficiency parameters. Target pumping rates were approximately 15, 30, and 50 gallons per minute (gpm) for basin fill wells and 5, 10, and 20 gpm for bedrock wells. Actual pumping rates varied depending on pump capacities, well productivities, and aquifer properties. For example, most wells completed in the Glance Conglomerate were pumped at substantially lower rates due the formation's low productivity. At BMO-1G and BMO-10GU, the tested well was pumped at only two rates due to low productivity. In general, the duration of pumping at the first two rates was approximately 1 hour for each, and at the maximum rate, approximately 8 hours (hrs), although at some locations (e.g., BMO-10GL) the initial low rate was sustained for approximately 8 hrs and the higher rates at about 1 hr each. Table N.1 lists pumping rates and durations for each test.

Pumping rates for BMO-series tests were measured using in-line flowmeters supplied by Verdad Group and by measuring the time to fill a vessel of known volume (the "bucket and stopwatch" method). In most cases, the vessel consisted of a calibrated, 55-gallon drum that allowed very accurate calculation of actual pumping rates because of its large capacity. Pumping rates for tests at existing wells were measured using in-line flowmeters when possible or by the bucket and stopwatch method.

1.4 Water Level Monitoring

Water level monitoring consisted of continuous monitoring of water levels in pumping and (where available) observation wells prior to, during, and after pumping. Observation wells included available wells within a few hundred feet of the pumped well. Observation wells were

either other wells in the newly installed well nest, or existing wells, screened at intervals either deeper or shallower than the pumped well. For example, BMO-6M was used as an observation well during pumping of BMO-6B and vice versa. Relative to BMO-6B, completed in basin fill, BMO-6M is screened over a deeper interval within the underlying Morita Formation (Section 3.4.4.5 of the main text).

Water levels were typically monitored at 30-second intervals using In-Situ Level Trolls (Trolls). The Trolls, which are submersible instruments containing pressure transducers and data loggers, were initially placed at sufficient depths below the static water levels in the wells to remain submerged throughout each test. Some of the Trolls used in the tests were vented to the atmosphere and therefore measured gauge pressures, while others were absolute pressure transducers. In all cases, an absolute pressure Troll at the surface continuously recorded atmospheric pressure during each test.

The pressure ranges of the Trolls selected for each test were based on the anticipated maximum response in the well in which the Troll was to be deployed. Trolls with a range of 30 pounds per square inch (psi), or approximately 70 feet of water, were typically used. For some of the pumped wells, Trolls with ranges of as much as 100 psi (approximately 230 feet of water) were used.

As an independent verification of the Troll data, water level measurements in pumping and observation wells were collected by hand using an electric water level sounder as frequently as practical. In some cases, hand collection of water levels was not possible over the entire

duration of a test due to binding-up of the water level probe. Binding resulted from crowding within the narrow diameter (2-inch or less) sounding tubes, which accommodated the vent lines and cables for the Trolls, and provided the only access for the water level sounder. In cases where the drawdown in a well exceeded the depth of placement of the Troll (such as at BMO-10GU) the hand-collected data were used during the period that the Troll was not submerged. In cases where the Troll data were of poor quality (excessively noisy), the hand collected data were used exclusively for analysis (e.g., at BMO-13B).

1.5 Data Analysis

Pressure data from the Trolls were downloaded and converted to depths to water and to water level drawdowns for purposes of analysis. Although these data were corrected for changes in atmospheric pressure, the corrections were in most cases negligible with respect to drawdown. In many cases where sufficient measurements were available (for example, at BMO-3B), the hand collected depths to water were converted to water level drawdowns and analyzed independently. As discussed above, in cases where the Troll data were of poor quality, the hand-collected data were used exclusively in the analyses. In all cases, hand-measured depths to water were compared with depths to water calculated from Troll readings as a check on Troll accuracy.

For purposes of analysis, the total number of automatically logged drawdown records was reduced. Typically, the first 5 to 10 records at the beginning of each pumping step were retained for analysis. Then, every second, then third, then fourth, etc, record was retained, until the beginning of the next pumping step. This was necessary in most cases to meet input data size

limits for the software used to analyze the data, and to improve the rate at which automatic parameter estimation could proceed.

At BMO-3B and BMO-6M Troll data were noisy, but useable, and were smoothed prior to analysis. This was accomplished by taking a 7-point moving average one or more times until the desired smoothness was achieved, or by breaking the data into blocks of 20 to 30 values and using the average value of each block in the analysis.

Drawdown and pumping rate data were analyzed using WHIP, a well hydraulics interpretation package developed and marketed by HGC (HGC, 1988). WHIP has solutions that account for variable pumping rates, vertical flow and leakage, wellbore storage, and partial penetration of pumping and observation wells within a vertically anisotropic aquifer. WHIP also accounts for head losses in the pumped well resulting from well efficiency effects. Direct estimation of vertical hydraulic conductivities of the aquifer and an aquitard (if present) is available as part of the vertically anisotropic aquifer solution provided in WHIP.

Hydraulic properties and pumping well efficiency parameters were estimated using either the 'homogeneous aquifer' solution or the 'vertically anisotropic, partially penetrating well solution' (the partial penetration solution) available in WHIP. In many cases, both solutions were used for comparison. The homogeneous aquifer solution assumes full well penetration, allows faster parameter estimation than the partial penetration solution, and accounts for well bore storage effects and vertical leakage (if present) into the aquifer. The homogeneous aquifer solution was used exclusively in cases where the pumped well fully penetrated the basin fill

aquifer (for example, at BMO-3B). The partial penetration solution accounts for partial penetration of pumping and observation wells, for vertical flow within an aquifer, and for leakage into the aquifer from an aquitard. The partial penetration solution was used for either basin fill or bedrock wells that did not fully penetrate the basin fill or bedrock unit they were completed within. Figure N.2 is a schematic illustrating some of the assumptions used in applying the two solutions. Non-horizontal flow typically associated with unconfined (phreatic) aquifer conditions can be approximated by applying a Dupuit correction to either solution

Hydraulic parameters estimated from each test included transmissivity, storage coefficient, and pumped well efficiency parameters. Vertical hydraulic conductivity was estimated when the partially penetrating well solution was used. In each case, pumping and recovery data were analyzed together to obtain the best fit to all collected data. In cases where a good fit to both were not obtained, drawdown and recovery data were analyzed separately. The automatic parameter estimation routines were utilized when needed to improve the fits between measured and simulated drawdowns. In cases where a nearby observation well completed at a different depth interval than the pumping well in the same formation showed no response to pumping (for example at site BMO-10), the lack of response was used to provide a limit on the vertical conductivity.

Because the only wells close enough to serve as observation wells were completed within a different formation than the pumped well or were completed within a different depth interval of the same formation in which the pumped well was completed, drawdowns were not detectable at observation wells in most cases. Accurate estimation of storage coefficient is usually not

possible using only data from the pumped well. Drawdowns in the pumped well are often significantly affected by borehole storage and head losses due to low well efficiency. Therefore, a value of 0.01 was initially assumed for wells completed in unconfined aquifers, and 1 x 10^{-5} for wells which were assumed to be completed in confined aquifers. In general, wells completed in basin fill were assumed to be under unconfined conditions, and those completed in bedrock aquifers located beneath either saturated basin fill or saturated bedrock of an overlying formation were assumed to be under confined conditions. During analysis, the storage coefficient was adjusted to improve the fit between measured and simulated drawdowns at the pumped well even though analyzable observation well data were not obtained.

When using the partial penetration solution, the specification of the screened intervals of pumping and observation wells, and the upper and lower boundaries of the aquifer (and aquitard, if present) were based on the particular conditions at each test location. For basin fill wells, the lower aquifer boundary was usually assumed to coincide with the bedrock contact, and the top of the aquifer to coincide with the static water level in the well. For bedrock wells, the lower boundary was typically assumed to be the base of the well's filter pack, and the top boundary to be either the upper contact of the formation, or the static water level in the well if the static water level was below the upper contact. The effective horizontal hydraulic conductivities of the aquifer intervals penetrated by the pumped wells can be approximated by dividing the estimated transmissivity by the aquifer thicknesses assumed in the respective analyses.

Exceptions to these guidelines occurred at locations where observation wells completed in one formation responded to pumping in another formation. For example, at the location of the

BMO-5 series wells, the well completed in the basin fill (BMO-5B) responded to pumping at the well completed in the underlying Cintura Formation (BMO-5M) and vice versa. Analyses using the partial penetration solution assumed that the aquifer extended from the water table (the static water level in BMO-5B) to the base of the filter pack in BMO-5M. Calculating the effective hydraulic conductivity across the assumed aquifer thickness in this case resulted in some averaging of the basin fill and Cintura Formation conductivities. Other exceptions are discussed in Section 1.5.1.

When analyzing tests at partially penetrating wells using the homogeneous aquifer solution, the pumped well was assumed to be fully penetrating, the aquifer assumed to be only as thick as the pumped well filter pack interval, and any vertical flow was represented as leakage from intervals above or below. These assumptions result in a lower transmissivity than would be calculated using the partial penetration solution because the assumed aquifer thickness would be correspondingly smaller. In most cases, however, the effective hydraulic conductivity computed would be similar to that computed using the partial penetration solution because the reduced transmissivity estimate would be nearly compensated for by the reduced aquifer thickness assumed.

Figure N.3 provides conceptual schematics that illustrate the application of the homogeneous aquifer and partial penetration solutions to the various test analyses described in Section 1.5.1. The schematics indicate the locations of well screens relative to formation boundaries, the selection of aquifer boundaries, and the location of the piezometric surfaces relative to formation and assumed aquifer boundaries.

1.5.1 Results

The results of analyzing pumping rate and drawdown data at the tested wells are provided in Figures N.4 through N.59 and Tables N.2 and N.3. Table N.2 provides the results of all the analyses. Table N.3 summarizes the ranges of hydraulic conductivity and provides a set of representative values for hydraulic properties. Details of the test results are provided in Sections 1.5.1.1 through 1.5.1.15. The results of the analyses for sulfate in samples collected at the time of testing are provided in Section 3.4.4 of the main text.

Multiple interpretations of the data from most tests were performed. The multiple interpretations were considered necessary because a single conceptual model could not *a priori* be determined to be superior to other possible conceptual models. Alternate interpretations were possible even when using one conceptual model and one aquifer solution method. Table N.2 and corresponding figures show the results corresponding to each interpretation and the quality of each interpretation. The quality of each interpretation is reflected in the goodness of fit between measured and simulated drawdowns using a particular set of hydraulic parameters.

The rationale for providing the results of multiple interpretations is that in most cases more than one conceptual model can provide an adequate fit to the data. Furthermore, when using a particular solution method, one set of parameters may not fit all portions of the data equally well. While one interpretation may provide a better fit to some portions of the data, another interpretation may provide a better fit to other portions. Because one interpretation was not always superior, the selection and presentation of only one interpretation may result in the loss of useful information. The final set of parameters provided in Table N.3 are generally based

on averages of the results shown in Table N.2, with the constraint that values considered outliers (based on professional judgment) were not included.

1.5.1.1 BMO-1

Results of testing well BMO-1G are provided in Table N.2 and Figures N.4 through N.6. BMO-1G is completed in the Glance Conglomerate (Section 3.4.4.1 of the main text). Drawdown data were analyzed using both the homogeneous aquifer and partial penetration solutions. There were no nearby wells to serve as observation wells during pumping of BMO-1G. Due to low productivity, BMO-1G was pumped at only two rates as shown in Table N.1.

Using the partial penetration solution, a transmissivity estimate of 75 ft^2/day over an aquifer thickness of 258 feet (the approximate thickness of the water column in the well) was obtained yielding a hydraulic conductivity of 0.29 ft/day. A negligible vertical conductivity of 5 x 10^{-7} ft/day was estimated. Using the homogeneous aquifer solution, transmissivity estimates ranged from 25 feet squared per day (ft^2/day) to 34.8 ft^2/day over a saturated thickness of 150 feet (the approximate length of the well's filter pack) yielding hydraulic conductivity estimates of 0.17 to 0.23 ft/day. Improving the fit to the first step (Figure N.5) reduces the quality of the fit to the third step and the recovery data. Fits to the data were generally better using the homogeneous aquifer solution. Low estimated storage coefficients of 5 x 10^{-6} to 6 x 10^{-6} imply confined conditions.

1.5.1.2 BMO-3

Results of testing BMO-3B are provided in Table N.2 and Figures N.7 through N.10. BMO-3B is completed within the basin fill (Section 3.4.4.2 of the main text). The test was analyzed using the homogeneous aquifer solution because the well fully penetrated the saturated portion of the basin fill. There were no nearby wells to serve as observation wells during pumping of BMO-3B.

Depending on the relative weight given to drawdown or recovery data, transmissivity estimates ranged from 3,000 to 4,500 ft^2/day which imply horizontal conductivities of 23.1 to 34.6 ft/day over a saturated thickness of 130 feet (the approximate saturated thickness of the basin fill at this location). An improved fit to the step 3 drawdowns was obtained by applying a Dupuit correction (Figure N.9). The improved fit implies non-horizontal flow to the well, consistent with a fully penetrating well in a phreatic (unconfined) aquifer, although the low estimated storage coefficients of 1×10^{-4} to 1×10^{-6} imply confined conditions. Analysis of the hand-collected drawdown data (Figure N.10) yielded results nearly identical to the results of analysis of the automatically logged data.

1.5.1.3 BMO-4

Results of testing BMO-4B are provided in Table N.2 and Figures N.11 and N.12. BMO-4B is completed within the basin fill (Section 3.4.4.3 of the main text). The test was analyzed using the partial penetration solution because the well only partially penetrated the saturated portion of the basin fill, and because nearby wells (NWC-03, ROGERS 803, and TVI-713/875)

that were used as observation wells were screened at various depths within the basin fill. During the test, measurable drawdowns were obtained only at the pumped well and observation well NWC-03 CAP. Data from NWC-03 CAP during the first 6 hours of the test were not useful because they were influenced by cycling of NWC-03 and, presumably, other nearby production wells. Only hand collected drawdowns from the pumped well were used in the analysis because automatically logged data were excessively noisy.

Transmissivity was estimated to range from 19,900 to 20,000 ft^2/day, vertical hydraulic conductivity from 0.867 to 1 ft/day, and storage coefficient from 4.15×10^{-4} to 4.5×10^{-4} (Table N.2 and Figures N.11 and N.12) depending on whether data from the pumped well or the observation well (NWC-03 CAP) was analyzed. These transmissivities yield nearly identical horizontal hydraulic conductivities of 39.4 and 39.6 ft/day over an aquifer thickness of 505 feet (the approximate saturated thickness of the basin fill at this location). The estimated storage coefficients are lower than would be expected for an unconfined aquifer.

Background monitoring of BMO-4B and observation well NWC-03 CAP prior to the testing indicated that variations in water level of a few tenths of a foot to more than 1 foot (that are only partially related to changes in barometric pressure) can occur within the vicinity of BMO-4B (Figure N.13). BMO-4B is screened from 500-600 feet below land surface (ft bls), and NWC-03 CAP is screened only to a depth of 160 feet. Although NWC-03 CAP is located only about 200 feet from BMO-4B, the background water level fluctuations in the two wells correlate poorly. The poor correlation indicates that changes in hydraulic head within the basin fill in this area can vary substantially with depth.

1.5.1.4 BMO-5

Results of testing the BMO-5 series wells are provided in Table N.2 and Figures N.14 through N.20. BMO-5B is completed within the basin fill and BMO-5M within the Cintura Formation (Section 3.4.4.4 of the main text). For comparison purposes, tests were analyzed using both the partial penetration solution and the homogeneous aquifer solutions.

Variations in drawdown during the third step of the BMO-5M test, which were reflected in both automatically logged and hand collected data, were not attributable to measured changes in atmospheric pressure or changes in pumping rate (Figure N.14). Although BMO-5M is completed in bedrock (interpreted to be the Cintura Formation) and BMO-5B in the basin fill, measurable responses were obtained at BMO-5M during pumping at BMO-5B and vice versa. These responses indicate significant hydraulic interaction between the basin fill and the upper bedrock at this location.

When analyzing the test data from pumping BMO-5B using the partial penetration solution, the upper portion of the Cintura Formation was assumed part of the same aquifer as the basin fill. This assumption is justified by the response of BMO-5M to pumping at BMO-5B and vice versa, and allowed estimation of hydraulic parameters using BMO-5M as an observation well during pumping of BMO-5B and vice versa. When using an observation well completed in a different formation than the pumping well, estimates of horizontal and vertical hydraulic conductivity and storage coefficient will be affected by the properties of both formations.

Using the partial penetration solution and only data from the pumping well (BMO-5B), a transmissivity estimate of 25,000 ft^2/day, a vertical hydraulic conductivity estimate of 3 ft/day, and a storage coefficient estimate of 0.076 were obtained (Figure N.15). Using only data from the observation well (BMO-5M) during pumping of BMO-5B, a transmissivity estimate of 30,000 ft^2/day, a vertical hydraulic conductivity estimate of 4.3 ft/day, and a storage coefficient estimate of 1.05×10^{-4} were obtained (Figure N.16). The transmissivity and vertical hydraulic conductivity estimates are similar but the estimated storage coefficients differ by 2 orders of magnitude. The low estimate obtained from the observation well (BMO-5M) data is likely more representative of the Cintura Formation in which it is completed than of the basin fill aquifer. The range of estimated transmissivities imply a range in horizontal conductivity of 93.3 ft/day to 95.2 ft/day over an assumed aquifer thickness of 315 feet. The assumed aquifer thickness was defined by the static water level in BMO-5B and the base of the filter pack in BMO-5M.

Analyzing data from pumping of BMO-5M using the partial penetration solution resulted in somewhat different parameters even though the aquifer thickness was assumed to be the same and a response to pumping BMO-5M was measured at BMO-5B. Using only data from the pumping well (BMO-5M), a transmissivity of 2,200 ft^2/day and a vertical hydraulic conductivity estimate of 3 ft/day were obtained (Figure N.18). Using only data from the observation well (BMO-5B) during pumping of BMO-5M, a transmissivity estimate of 528 ft^2/day, a vertical hydraulic conductivity estimate of 1.1 ft/day, and a storage coefficient of 0.035 were obtained (Figure N.19). The transmissivity estimates are one to two orders of magnitude lower than estimated from the data obtained from pumping BMO-5B although the vertical conductivity estimates are similar. The range of transmissivities implies a range in horizontal conductivities

of 1.7 ft/day to 7 ft/day over an aquifer thickness of 315 feet. The analysis of data from the observation well (BMO-5B) yields a significantly lower horizontal conductivity and higher storage coefficient than data from the pumping well (BMO-5M). The higher storage estimate obtained from the observation well data is likely more representative of the basin fill in which it is completed than of the Cintura Formation. Conversely, the transmissivity estimate is likely more representative of the pumped (Cintura) formation.

That transmissivity estimates are dominated by the pumped formation is consistent with the Cintura Formation having a lower average conductivity than the basin fill. The similar vertical conductivity estimates represent some average over the two hydrostratigraphic units. The relatively high estimates of vertical conductivity are consistent with the responses measured in one unit while the other is pumped. The interaction between the two units is also consistent with the lithologic logs which show an absence of clayey material sometimes reported near the bottom of the basin fill. The cross-formation responses suggest that either the upper portion of the Cintura Formation is so weathered, fractured, poorly cemented, or coarse-grained, that its behavior is hydraulically similar to the basin fill, or that near-vertical permeable structures penetrating the Cintura Formation (or both the Cintura Formation and basin fill) exist at this location.

When using the homogeneous aquifer solution to analyze data from the pumping wells, full well penetration and horizontal flow were assumed, and vertical flow (leakage) into the portion of the aquifer penetrated by the pumped well filter pack was approximated by assigning a

leakance term. The assumed aquifer thicknesses of 145 feet for BMO-5B, and 130 feet for BMO-5M, are the approximate lengths of the respective filter pack lengths.

A transmissivity estimate of 3,370 ft^2/day, a leakance of 0.2/day, and a storage coefficient of 6.9 x 10^{-3} were obtained from the data from BMO-5B (Figure N.17). This transmissivity implies a conductivity of only 23.2 ft/day over an aquifer thickness of 145 feet, which is substantially lower than the estimate obtained using the partial penetration solution. The rather large leakance value of 0.2/day implies significant vertical flow. A transmissivity estimate of 986 ft^2/day, a leakance of 0.06/day, and a storage coefficient of 1.9 x 10^{-3} were obtained for the data from BMO-5M (Figure N.20). This transmissivity implies a horizontal conductivity of 7.6 ft/day over an aquifer thickness of 130 feet, which is at the high end of the range estimated using data from the pumping well and data from the observation well in the partial penetration analysis.

In general, slightly better fits to the pumping well data, especially to the third step, were obtained using the homogeneous aquifer solutions for both the BMO-5B and BMO-5M test data (Figures N.17 and N.20). These improved fits could only be obtained by assuming large leakances which imply vertical interaction between basin fill and Cintura Formation. These results imply the existence of high vertical permeability structures in the vicinity of the BMO-5 wells as discussed above.

1.5.1.5 BMO-6

Results of testing the BMO-6 series wells are provided in Table N.2 and Figures N.21 through N.26. BMO-6M is completed in bedrock interpreted to be the Cintura Formation and BMO-6B in both basin fill and the weathered upper portion of the Cintura Formation (Section 3.4.4.5 of the main text). Measurable responses were not obtained at BMO-6M during pumping at BMO-6B or vice versa. The data from BMO-6M were analyzed using both the partial penetration solution and the homogeneous aquifer solutions for comparison purposes. The data from BMO-6B were analyzed using only the homogeneous aquifer solution because the well fully penetrated the saturated portion of the basin fill.

Only the data from the first two steps of the test at BMO-6B were interpretable for hydraulic properties. Figure N.21 shows the raw drawdown data, Figure N.22 shows the fit to the first two steps, and Figure N.23 shows the fit to all the data. Features in the drawdown data from BMO-6B that made the third step uninterpretable for hydraulic properties include the rapid increases in drawdown during the initial portion of the third step and from 540 minutes to the end of pumping. The rapid increases in drawdown that occurred in the early and latter portions of the third step cannot be attributed to changes in pumping rate or to low well efficiency. Furthermore, the changes in slope of the drawdown data (Figure N.21) were detected over the same depth intervals in the pumping and recovery data. This behavior likely results from dewatering of relatively thin water bearing zones that supply most of the water to the well or to the development of seepage faces as the water level in the well dropped below one or more of these relatively thin water bearing zones. Once seepage faces develop, the well is decoupled from these water bearing zones, and the rate at which water flows into the well from these zones

is independent of the water level in the well. Under these conditions the standard solutions used to analyze hydraulic tests are invalid.

Using the homogeneous aquifer solution to analyze data from the first two steps, the transmissivity at BMO-6B was estimated to be 170 ft^2/day over a saturated thickness of 75 feet yielding a hydraulic conductivity of 2.26 ft/day (Figures N.22 and N.23). The estimated storage coefficient of 1 x 10^{-4} suggests confined behavior.

Using the partial penetration solution, the transmissivity at BMO-6M was estimated to be 2,870 ft^2/day over an aquifer thickness of 190 feet (the approximate depth of penetration of the well into the Cintura Formation) (Figure N.24). In performing the analysis, the basin fill was treated as an aquitard (or confining layer that is a source of leakage, Figure N.2 and N.3) but having the same vertical conductivity as the Cintura Formation. The vertical hydraulic conductivities of the Cintura Formation and basin fill were estimated to be negligible (1 x 10^{-6} ft/day), indicating that the basin fill and the Cintura Formation are essentially isolated hydraulically. Analysis of the hand-collected drawdown data at BMO-6M yielded results nearly identical to the results of analysis of the automatically logged data (Figure N.26). Using the homogeneous aquifer solution, a transmissivity of 2,100 ft^2/day over an aquifer thickness of 130 feet (the approximate length of the filter pack) was obtained (Figure N.26). The aquifer was assumed to be only as thick as the filter pack length, and flow to be horizontal, with no vertical leakage from above or below the aquifer interval penetrated by the filter pack.

These transmissivities and assumed aquifer thicknesses yield similar hydraulic conductivities of 15.1 and 16.2 ft/day, respectively. Estimated storage coefficients of 1×10^{-5} are consistent with confined conditions.

The estimated low hydraulic conductivity of the material penetrated by BMO-6B, which included basin fill and weathered Cintura Formation, and the changes in slopes in the drawdown, are consistent with a heterogeneous material that transmitted water to BMO-6B primarily via higher conductivity (coarser-grained) zones. These zones are likely thin and/or discontinuous. The calculated conductivity represents an average over the entire saturated portion of the basin fill and top of the Cintura Formation penetrated by the well and is influenced by the presence of thick intervals having a large proportion of fine-grained material. These fine-grained materials, described in the lithologic logs for this well (Appendix J), presumably have a low conductivity. The low calculated conductivity for the mixture of basin fill and weathered top of the Cintura Formation penetrated by BMO-6B seems anomalous in comparison to the relatively high conductivity calculated for the Cintura Formation at co-located well BMO-6M.

1.5.1.6 BMO-7 and MW-1

Results of testing BMO-7M and MW-1 are provided in Table N.2 and Figures N.27 through N.37. BMO-7M is completed in the Morita Formation and MW-1 in the basin fill (Section 3.4.4.6 of the main text). Tests were analyzed using both the partial penetration and the homogeneous aquifer solutions.

Although BMO-7M is completed in the Morita Formation and MW-1 in the basin fill, and MW-1 is located nearly 500 feet east of BMO-7M, a measurable response was obtained at MW-1 during pumping of BMO-7M. Conversely, BMO-7M did not respond to pumping at MW-1, perhaps because MW-1 was pumped at only one low rate of 11 gpm (Table N.1) whereas BMO-7 was pumped at three rates (11, 23, and 34 gpm). The response of MW-1 to pumping at BMO-7M indicates the potential for vertical interaction between basin fill and the shallow Morita Formation at this location.

Although well efficiency parameters were estimated for BMO-7M, the solutions were not very sensitive to these parameters, and applying them provided little improvement in the fit between measured and simulated drawdowns. Regardless, the well efficiency corrections were applied as shown in Table N.3.

Using the partial penetration solution to analyze drawdowns at BMO-7M, a transmissivity estimate of 105 ft^2/day over a thickness of 190 feet (the approximate depth of penetration of the well into the Morita Formation) and a vertical conductivity of 1 x 10^{-5} ft/day were obtained. This transmissivity and aquifer thickness yield a hydraulic conductivity of 0.62 ft/day (Figure N.27). The analysis assumed that the basin fill was a source of water to the Morita Formation at BMO-7M via downward flow or leakage. The basin fill was treated as an aquitard (or confining layer that is a source of leakage, Figure N.2 and N.3) but having the same vertical conductivity as the Morita Formation. The vertical hydraulic conductivities of the Morita Formation and basin fill were estimated to be low (1 x 10^{-5} ft/day), indicating little hydraulic interaction between the two formations. Attempts to treat the basin fill as part of the same

aquifer as the Morita Formation (as in the partial penetration analyses for BMO-5) did not provide reasonable fits to the data.

Using the homogeneous aquifer solution, a transmissivity estimate of 81 ft^2/day over a thickness of 130 feet (the approximate length of the well's filter pack) was obtained Figure N.31). This transmissivity and aquifer thickness yield a horizontal conductivity of approximately 0.55 ft/day. Only the aquifer interval penetrated by the filter pack was assumed to provide water to the well. Flow was assumed to be primarily horizontal with no significant leakage from above or from below the screened interval of the well.

Assuming a somewhat large effective well radius of 0.5 feet provided the best fit to all the data when using the homogeneous aquifer solution. This suggests an effective bore radius that is larger than nominal due to washout of the borehole during drilling. The increased bore radius would increase the storage of the filter pack and would increase the effective well radius provided the filter pack has higher storage than the aquifer. The increased diameter of the borehole will, however, only affect the results to the extent that the filter pack has different storage properties than the aquifer. Borehole washout at BMO-7M is likely, by analogy with BMO-8M and BMO-13M where it has been confirmed by video and caliper logging.

The fits between measured and simulated drawdowns were poor for both the partial penetration and homogeneous aquifer solutions as shown in Figures N.27 and N.31. Improved fits to the third step and recovery data were obtained by applying a Dupuit correction to the BMO-7M drawdown data (Figures N.28 and N.32) regardless of whether the well was

considered fully or partially penetrating. Using the Dupuit correction with the partial penetration solution, a transmissivity estimate of 125 ft^2/day over a thickness of 190 feet and a vertical conductivity of 0.45 ft/day were obtained, implying a horizontal conductivity of 0.66 ft/day. This is very close to the 0.62 ft/day obtained without the Dupuit correction. Using the Dupuit correction with the homogeneous aquifer solution, a transmissivity estimate of 170 ft^2/day over a thickness of 100 feet (the length of the screen) was obtained, implying a horizontal conductivity of 1.7 ft/day. This estimate is more than double the estimate of 0.55 ft/day obtained without the Dupuit correction.

The improved fits when using the Dupuit correction suggest the occurrence of non-horizontal flow similar to that encountered when pumping an unconfined (phreatic) aquifer. Analysis of the hand-collected drawdown data at BMO-7M yielded results nearly identical to the results of analysis of the automatically logged data (Figure N.28 and N.29). The improvement of the fit when using the partial penetration solution with the Dupuit correction and a higher vertical conductivity (Figure N.28) is consistent with the apparent response of MW-1 to pumping in BMO-7M because it implies a vertical flow component. However, a reasonably good fit to all the data was obtained by assuming full penetration with no vertical leakage (Figure N.32).

Although improved fits were obtained to the third step and recovery data by applying a Dupuit correction, Figures N.27 and N.31 indicate that the fit to the first and second steps is rather poor. An analysis using the partial penetration solution that considered only the first step is shown in Figure N.30. A transmissivity estimate of 278 ft^2/day over a thickness of 190 feet, and a vertical conductivity of 0.1 ft/day were obtained, implying a horizontal conductivity of 1.5

ft/day. This estimate is more than double the estimate of 0.66 ft/day obtained using all the data. Again, the vertical conductivity estimate implies vertical interaction and is consistent with the apparent response at MW-1. The higher transmissivity estimate obtained from the first step suggests that the effective conductivity of the Morita Formation may decrease as drawdown increases, possibly due to dewatering of relatively isolated, relatively low storage, higher permeability zones as pumping rate increases. While this suggests dual porosity, a dual porosity effect was not evident in the drawdown data.

The response at MW-1 to pumping at BMO-7M was also analyzed using the partial penetration solution. This required the assumption that the basin fill and portion of the Morita Formation penetrated by BMO-7M constituted a single aquifer (similar to the analysis at BMO-5). A transmissivity of 16,100 ft^2/day over a thickness of 440 feet and a vertical conductivity of 0.064 ft/day were obtained (Figure N.33). The assumed aquifer thickness of 440 feet is defined by the static water level in MW-1 and the base of the filter pack in BMO-7M. The transmissivity estimate is anomalously high for the Morita Formation because it represents some averaging of the basin fill and Morita Formation at this location. The implied horizontal conductivity of 37 ft/day is much larger than the estimates for the Morita Formation based on pumping well data but is less than half the basin fill conductivity estimates obtained from analysis of pumping MW-1 as discussed below. The approximate arithmetic average of the conductivities of the basin fill and Morita Formation is 37 ft/day at this location.

Estimates of storage coefficient from the various analyses of data obtained from pumping BMO-7M varied from 4.6×10^{-5} to 0.42 depending on the method of analysis, and therefore

range from values typical of confined to unconfined conditions. The lowest value was obtained from analysis of the response at MW-1 to pumping at BMO-7M. This is to be expected because measurable drawdowns would be very unlikely considering the relatively short duration of pumping, the relatively low pumping rate at BMO-7M, and the lateral and vertical distance between the well screens, unless the effective storage coefficient was low.

Analysis of data obtained during pumping of MW-1 using the partial penetration solution provided a transmissivity estimate of 19,200 ft^2/day over a thickness of 257 feet (the thickness of saturated basin fill at this location), yielding a hydraulic conductivity of 75 ft/day (Figure N.34). The vertical hydraulic conductivity was estimated to be negligible. Using the homogeneous aquifer solution, transmissivity estimates ranging from 7,790 ft^2/day to 11,500 ft^2/day over a thickness of 90 feet (the approximate length of the well's filter pack) were obtained, yielding hydraulic conductivity estimates of 87 to 128 ft/day (Figures N.35 through N.37). Analysis of the hand-collected data at MW-1 yielded a higher transmissivity compared to the results of analysis of the automatically logged data (Table N.3). The estimated storage coefficients of 0.1 to 0.01 are consistent with unconfined conditions.

The ranges of estimates of hydraulic properties obtained from testing of BMO-7M and MW-1 are indicative of the complexity of the hydraulic system at that location. Some interaction between the basin fill and Morita Formation is indicated by the response of MW-1 to pumping at BMO-7M. This interaction could be due to weathering or fracturing of the upper portion of the Morita Formation that increases its permeability to levels more typical of basin fill, or to near-vertical structures that penetrate both Morita Formation and basin fill at this location. Such

structures would be consistent with the low effective storage coefficient estimated from the MW-1 response to BMO-7M pumping. However, reasonable fits to drawdown data obtained during pumping of MW-1, or to later portions of the drawdown data at BMO-7M, did not require the assumption of significant vertical flow, which would seem to be necessary if pumping from the bedrock at BMO-7M can affect basin fill water levels at MW-1. These apparent inconsistencies are not resolvable using standard analytical aquifer test methods.

1.5.1.7 BMO-8

Results of testing the BMO-8 series wells are provided in Table N.2 and Figures N.38 through N.43. BMO-8M is completed in the Morita Formation and BMO-8B in the basin fill (Section 3.4.4.7 of the main text). The data from BMO-8B were analyzed using the partial penetration solution because the well did not fully penetrate the saturated portion of the basin fill. The data from BMO-8M were analyzed using both the partial penetration solution and the homogeneous aquifer solution for comparison purposes. No measurable responses were obtained at BMO-8M during pumping at BMO-8B or vice versa. Due to excessive noise in the automatically logged data during pumping, hand collected data were used exclusively to analyze the pumping portions of the tests. Because the noise did not affect the automatically logged recovery data, the automatically logged data were used to analyze the recovery portions of the tests.

Using the homogeneous aquifer solution, the transmissivity at BMO-8B was estimated to be 3,500 ft^2/day over a saturated thickness of 197 feet (the thickness of saturated basin fill at this

location) yielding a hydraulic conductivity of 17.8 ft/day. A storage coefficient of 0.01 was estimated, consistent with unconfined conditions (Figure N.38).

Using the partial penetration solution, the transmissivity at BMO-8M was estimated to range from 115 to 146 ft^2/day over an aquifer thickness of 725 feet (the approximate depth of penetration of the well into the Morita Formation), depending on whether drawdown or recovery data were analyzed. This transmissivity and aquifer thickness yield a hydraulic conductivity range of 0.16 to 0.20 ft/day (Figures N.39 and N.40). The vertical hydraulic conductivity was estimated to be negligible (1×10^{-5} ft/day). In performing the analysis, the Morita Formation was considered to be hydraulically isolated from the basin fill. A large effective well radius of 1 foot improved the quality of fit to the data. Using the homogeneous aquifer solution, transmissivity estimates ranged from 20 to 31 ft^2/day over an aquifer thickness of 135 feet (the approximate length of the filter pack), yielding hydraulic conductivities ranging from 0.15 to 0.23 ft/day (Figures N.41 and N.42). The aquifer was assumed to be only as thick as the filter pack length, and flow to be horizontal, with no vertical leakage from above or below the aquifer interval penetrated by the filter pack. Effective well radii of 0.33 and 0.43 feet improved the quality of fit to the data. Using the Dupuit correction (Figure N.42) also improved the overall fit to the data, suggesting the occurrence of the non-horizontal flow conditions typical when pumping an unconfined (phreatic) aquifer.

Because fits to the first step were slightly poor, an additional analysis was performed using the partial penetration solution that considered only the first step data (Figure N.43). A transmissivity of 220 ft^2/day over an aquifer thickness of 725 feet, and a vertical conductivity of

1 x 10^{-3} ft/day were obtained. This transmissivity and aquifer thickness yield a horizontal hydraulic conductivity of 0.30 ft/day.

Estimates of storage coefficient ranged from 0.12 to 0.40 depending on the method of analysis, and are inconsistent with the expected confined conditions at BMO-8M. The estimated storage coefficients would be even higher if, as discussed below, a large effective well radius was not assumed in the analyses. The assumption of relatively large storage coefficients and large effective well radii provided the best overall fits to the data.

The improved fits to the data when specifying an effective well radius of up to 1 foot in using the partial penetration solution indicate that the effective bore radius was larger than nominal due to washout of the borehole during drilling. A similar behavior was encountered when analyzing tests at BMO-7M (Section 1.5.1.6). Borehole washout was confirmed at BMO-8M by video and caliper logging. Washout would increase the storage of the filter pack and could increase the effective well radius assuming that the filter pack has a higher storage that the formation. However, it seems unlikely that washout would be extensive enough to justify an effective radius as large as 1 foot. The effective radii used in the homogeneous aquifer solutions (of 0.43 feet or less, Table N.3) are more reasonable.

1.5.1.8 BMO-9

Results of testing BMO-9M are provided in Table N.2 and Figures N.44 and N.45. BMO-9M is completed in the Morita Formation (Section 3.4.4.8 of the main text). The data

were analyzed using the homogeneous aquifer solution because reasonable fits to measured drawdowns were not obtained using the partial penetration solution. A good fit to all the data was not possible using only one set of parameters. Therefore, two analyses were performed; one focused on the late time drawdown and recovery data and the other on the first pumping step.

Transmissivity estimates range from 28 ft^2/day (using the late time and recovery data, Figure N.44) to 101 ft^2/day (using only step 1 data, Figure N.45) over an aquifer thickness of 130 feet (the approximate length of the well's filter pack), yielding hydraulic conductivities of 0.21 and 0.78 ft/day, respectively. Only the aquifer interval penetrated by the filter pack was assumed to provide water to the well. Flow was assumed to be horizontal with no significant leakage from above or from below the filter pack interval of the well. The storage coefficient estimated from the late time and recovery data was 0.24, and from step 1 data was 0.021 (Table N.2). The value of 0.24 is typical of an unconfined aquifer.

When focusing on the late time and recovery data, specifying a rather large effective well radius of 0.81 feet provided the best overall fit, suggesting that the bore radius was larger than nominal due to washout, as at BMO-7M and BMO-8M. As shown in Figure N.44, the fit to the recovery portion of the data is good, but the fit to the pumping portion of the data is poor. In this case the assumption of both a large storage coefficient and a large effective well radius were needed to provide the best fit to all the data, especially the recovery data. When considering only step 1 the specification of a large well radius was not necessary to provide a good fit to the data; however, the aquifer properties that provided a good fit to step 1 did not provide good fits to steps 2 or 3 or to the recovery data.

1.5.1.9 BMO-10

Results of testing the BMO-10G well nest are provided in Table N.2 and Figures N.46 through N.48. Both BMO-10GU and BMO-10GL are completed in the Glance Conglomerate (Section 3.4.4.9 of the main text). BMO-10GU is about 95 feet north of BMO-10GL. Tests of both wells were analyzed using the homogeneous aquifer solution. No measurable responses were obtained at BMO-10GU during pumping at BMO-10GL or vice versa. Due to low productivity, BMO-10GL was pumped at only two rates as shown in Table N.1.

The drawdown at BMO-10GU displayed several significant changes in slope during both steps of the test (Figure N.46) even though pumping rate was relatively constant during each step. The changes in slope are interpreted to represent changes in hydraulic responses due to discontinuities in the aquifer materials. The drawdowns during the latter portion of the first step and during the higher pumping step could not be interpreted; only the early portion of the first step and the latter portion of the recovery data were interpretable for hydraulic parameters. The decrease in data frequency once the drawdown exceeded about 70 feet is due to the dropping of the water level below the Troll in the well. Hand collected data are displayed in the time interval during which the Troll was not submerged.

Transmissivity estimates of 4.92 ft^2/day over an assumed aquifer thickness of 140 feet, and 0.451 ft^2/day over a thickness of 135 feet were obtained at BMO-10GU and BMO-10GL, respectively (Figures N.47 and N.48). The approximate filter pack lengths for BMO-10GU and BMO-10GL are 140 feet and 135 feet, respectively. In analyzing the data, only the aquifer interval penetrated by each well's filter pack was assumed to provide water to the well. Flow

was assumed to be horizontal with no significant leakage from above or from below the filter pack interval of either well. These transmissivities and thicknesses yield hydraulic conductivity estimates of 0.035 ft/day for BMO-10GU and 0.0033 ft/day for BMO-10GL.

The estimated storage coefficients of 0.21 at BMO-10GU and of 0.0138 at BMO-10GL are generally typical of unconfined conditions. As at BMO-8M, the best fit to the data at BMO-10GL required the assumption of a large effective well radius and a somewhat larger storage coefficient than would seem typical for the expected confined conditions. Assuming a rather large effective well radius of 2.36 feet provided the best fit to all the BMO-10GL data. This value seems too large to be consistent with borehole washout but does indicate that the test was strongly influenced by storage effects regardless of the mechanism.

The discontinuities evident in the BMO-10GU drawdown (Figure N.46) during pumping were reflected in the recovery data. These discontinuities likely result from the development of seepage faces as the water level in the well dropped below a succession of relatively thin water bearing zones that supply most of the water to the well. Once seepage faces develop, the well is decoupled from these water bearing zones in that the rate at which water flows into the well from these zones is independent of the water level in the well. Under these conditions the standard solutions used to analyze hydraulic tests are invalid. Possibly BMO-10GL would have displayed similar behavior had water levels in that well dropped below the top of the screened interval during testing.

1.5.1.10 BMO-11

Results of testing BMO-11G are provided in Table N.2 and Figures N.49 and N.50. BMO-11G is completed in the Glance Conglomerate (Section 3.4.4.10 of the main text). The data were analyzed using both the partial penetration solution and the homogeneous aquifer solution for comparison purposes.

Using the partial penetration solution, the transmissivity was estimated as 115 ft^2/day over an aquifer thickness of 325 feet (the approximate length of the water column in the well) yielding a hydraulic conductivity estimate of 0.35 ft/day. Vertical conductivity was estimated as 0.01 ft/day. Using the homogeneous aquifer solution, the transmissivity was estimated as 60 ft^2/day over an assumed aquifer thickness of 180 feet (the approximate filter pack length of the well). The aquifer was assumed to be only as thick as the filter pack length, and flow to be horizontal, with no vertical leakage from above or below the aquifer interval penetrated by the filter pack. The assumption of negligible vertical leakage is generally consistent with the relatively low vertical conductivity of 0.01 ft/day estimated using the partial penetration solution. Estimated storage coefficients of 1×10^{-4} to 1×10^{-5} are consistent with confined conditions.

As shown in Table N.2, significant non-linear head losses occurred in the well at the higher pumping rates, as reflected in the well loss exponents that were estimated to range from 1.9 to 2.8 depending on the method of analysis.

1.5.1.11 BMO-13

The results of testing the BMO-13 series wells are provided in Table N.2 and Figures N.51 and N.52. BMO-13B is completed in the basin fill and BMO-13M in the Mural Limestone (Section 3.4.4.11 of the main text). Drawdown data from BMO-13B were analyzed using the partial penetration solution because the well does not quite fully penetrate the basin fill aquifer. Data from BMO-13M were analyzed using the homogeneous aquifer solution. Reasonable fits to measured drawdowns at BMO-13M could not be obtained using the partial penetration solution. No measurable responses were obtained at BMO-13M during pumping at BMO-13B or vice versa. Only hand collected data from BMO-13B were analyzed because the automatically logged data were excessively noisy.

As shown in Figure N.51, the interpretation of the test data from BMO-13B was complicated by short term changes in drawdown that are noticeable during the third step of the test. These were due to periodic cessation of drilling at nearby well BMO-13M at which times no water was airlifted from the formation. BMO-13B is approximately 120 feet from BMO-13M. The effect of water removal from the nearby well could be ignored in the analysis because the drilling began about 45 minutes prior to testing, and the water removed during drilling resulted in a relatively constant drawdown prior to the start of the test. The short term variations in drawdown caused by periodic cessation of drilling were sufficiently symmetrical that they did not need to be removed from the data set during the analysis.

Using the partial penetration solution, a transmissivity estimate of 7,500 ft^2/day over an assumed aquifer thickness of 313 feet and a storage coefficient of 0.01 were obtained at BMO-

13B. The approximate saturated thickness of the basin fill is 313 feet at this location. The transmissivity and assumed aquifer thickness yield a horizontal hydraulic conductivity of 24 ft/day. The response at BMO-13B to airlifting at BMO-13M suggests that the actual storage coefficient may be less than 0.01.

Using the homogeneous aquifer solution, a transmissivity estimate of 0.661 ft^2/day over an assumed aquifer thickness of 130 feet and a storage coefficient of 0.019 were obtained at BMO-13M. 130 feet is the approximate length of the well's filter pack. The aquifer was assumed to be only as thick as the filter pack length, and flow to be horizontal, with no vertical leakage from above or below the aquifer interval penetrated by the filter pack. The transmissivity and assumed aquifer thickness yield a horizontal hydraulic conductivity of 0.0051 ft/day. Assuming a rather large effective well radius of 1.13 feet provided the best fit to all the data. As discussed in Section 1.5.1.6, a large effective well radius is consistent with borehole washout during drilling. Washout was confirmed at BMO-13M by video and caliper logging. Although the effective well radius of 1.13 feet seems too large to be consistent with borehole washout, it indicates that the test was strongly influenced by storage effects.

The estimated storage coefficients of 0.01 at BMO-13B and 0.019 at BMO-13M are both typical of unconfined conditions. As at BMO-8M, the best fit to the data at BMO-13M required the assumption of a large effective well radius and a somewhat larger storage coefficient than would seem typical for the expected confined conditions.

1.5.1.12 GARNER

Results of testing the GARNER well are provided in Table N.2 and Figure N.53. The GARNER well is a private well interpreted to be completed within the Cintura Formation (but previously reported to be completed in Morita Formation). Data were analyzed using the homogeneous aquifer solution. As shown in Table N.1, the GARNER well was pumped at only a single rate due to constraints at the well.

A transmissivity estimate of 142 ft^2/day over a thickness of 120 feet (the approximate length of the well's filter pack) was obtained, yielding a hydraulic conductivity estimate of 1.18 ft/day. A storage coefficient of 1×10^{-5} was obtained, consistent with confined conditions. The analysis assumed strictly horizontal flow within the aquifer interval penetrated by the well screen, with no vertical leakage into this interval from above or below.

1.5.1.13 TM-02A

Results of testing TM-02A are provided in Table N.2 and Figures N.54 and N.55. TM-02A is a groundwater monitoring wells completed within the Glance Conglomerate. Data were analyzed using both the partial penetration and the 'homogeneous aquifer' solutions. As shown in Table N.1, TM-02A was pumped at only a single rate for a short period of time due to rapid dewatering. As a result of the low yield, the drawdown during pumping was significantly impacted by borehole storage.

Using the partial penetration solution, a transmissivity estimate of 15.7 ft^2/day over an aquifer thickness of 346 feet was obtained, yielding a hydraulic conductivity of 0.045 ft/day. 346 feet is the approximate depth of the penetration of the well into the Glance Conglomerate. A storage coefficient of 0.041 was obtained.

Using the homogeneous aquifer solution a transmissivity of 2 ft^2/day over a thickness of 100 feet was obtained, yielding a hydraulic conductivity estimate of 0.02 ft/day. 100 feet is the approximate length of the well's filter pack. The analysis assumed strictly horizontal flow within the aquifer interval penetrated by the well screen, with no vertical leakage into this interval from above or below. A storage coefficient of 2×10^{-4} was obtained, which seems more reasonable for the expected confined conditions at this well.

In fitting the data at TM-02A, assuming rather large effective well radii of 1.66 to 2.36 feet provided the best fit to the data. Although these values seem too large to be consistent with borehole washout, they indicate that the test was strongly influenced by storage effects.

1.5.1.14 NWC-03

Results of testing NWC-03 are provided in Table N.2 and Figure N.56. NWC-03 is a public supply well owned and operated by Naco Water Company that is completed within the basin fill. The test was conducted by monitoring drawdown at NWC-03 CAP, a former production well located approximately 25 feet from NWC-03, during a typical pumping cycle at

NWC-03. As shown in Table N.1, NWC-03 was pumped at only a single rate of approximately 52 gpm, which was estimated from the totalizer flow meter on NWC-03.

Drawdown data were analyzed using only the partial penetration solution because both the pumping well (NWC-03) and the observation well (NWC-03 CAP) partially penetrate the basin fill aquifer. NWC-03 CAP, with a total depth of only 179 ft bls, is screened over a shallower interval than NWC-03, which is screened from 252 to 312 ft bls. A transmissivity estimate of 21,000 ft^2/day over an aquifer thickness of 505 feet (based on the basin fill aquifer thickness encountered in BMO-4B), a vertical conductivity of 3.45 ft/day, and a storage coefficient of 4.53 x 10^{-4} were obtained. The transmissivity estimate implies a horizontal conductivity of 41.6 ft/day. The low storage coefficient is consistent with confined conditions.

1.5.1.15 TVI-875

Results of testing TVI-875 are provided in Table N.2 and Figures N.57 through N.59. TVI-875 is completed within the basin fill. The test was analyzed using the partial penetration solution because the well only partially penetrated the saturated portion of the basin fill, and because nearby wells (BMO-4B, NWC-03 CAP, and TVI-713) that were used as observation wells were screened at various depths within the basin fill. During the test, measurable drawdowns were obtained at all three observation wells. Drawdowns in the pumped well were not measured due to inaccessibility for water level monitoring.

Water level monitoring before and after the test indicated that water levels in all observation wells were increasing at a rate of approximately 2.92 x 10^{-5} ft/min. This trend was subtracted from the drawdown data prior to analysis. Although measurable drawdowns were obtained at all three observation wells, reasonable estimates of hydraulic parameters were not obtainable from drawdown data at NWC-03 CAP and BMO-4B using the partial penetration solution in WHIP. The Neuman unconfined aquifer solution available in AQTESOLV (HydroSOLVE, Inc., 2000) was therefore used to analyze these data. As with WHIP, wells were treated as partially penetrating when using the Neuman solution.

Transmissivity was estimated to range from 21,860 to 28,850 ft^2/day, vertical hydraulic conductivity from 8.6 x 10^{-3} to 1 ft/day, and storage coefficient from 6.9 x 10^{-6} to 3.2 x 10^{-3} (Table N.2 and Figures N.57 through N.59) depending on which observation well was analyzed and on the solution method. When using the Neuman solution, vertical conductivities were calculated from the resulting beta factors. The estimated transmissivities yield horizontal hydraulic conductivities ranging from 43.3 to 57.1 ft/day over an estimated aquifer thickness of 505 feet (based on the thickness encountered in BMO-4B). The horizontal hydraulic conductivities of 43.3 and 57.1 ft/day obtained using the Neuman solution bracket the estimate of 47.5 ft/day obtained using WHIP. The estimated storage coefficients are lower than would be expected for an unconfined aquifer.

1.6 Discussion

As shown in Table N.3, transmissivities are highest in basin fill and lowest in the Mural Limestone and Glance Conglomerate, with the Cintura and Morita Formations having intermediate values. Calculated hydraulic conductivities over the entire assumed aquifer thicknesses (which represent vertically averaged values) are also highest in the basin fill and lowest in the Mural Limestone and Glance Conglomerate. Although a number of different conceptual models were used to interpret data at some of the test locations, the hydraulic conductivity estimates shown in Table N.3 are similar to previous estimates for the site (Table 6 of the main text). The differences between maximum and minimum hydraulic conductivity estimates at individual test locations are greatest for bedrock wells, and are within a factor of two at all locations except at BMO-5M, BMO-7M, and BMO-9M.

Some of the important results of the hydraulic testing include:

1. Vertical hydraulic conductivities in bedrock aquifers are likely small except in the vicinities of BMO-5M and BMO-7M.

2. Responses in basin fill to pumping in the Cintura and Morita Formations at BMO-5M and BMO-7M, respectively, imply that either the upper bedrock and basin fill have similar hydraulic properties or that permeable vertical structures exist that connect them hydraulically at these locations.

3. Vertically averaged horizontal hydraulic conductivities (calculated over the assumed aquifer thicknesses) can vary by 2 to 3 orders of magnitude in both basin fill and bedrock.

4. Hydraulic conductivities generally decrease with depth in the bedrock.

5. Flow within bedrock aquifers may be dominated (at least locally) by higher permeability zones of limited thickness and/or lateral extent.

6. In areas where relatively thin higher permeability zones dominate the bedrock flow system, the permeability of these zones could be substantially higher than the (vertically averaged) estimates shown in Table N.3.

The presence of relatively thin permeable zones in bedrock is indicated by the discontinuities in the measured drawdowns during pumping of BMO-10GU. These discontinuities likely resulted from the development of seepage faces as the water level in the well dropped below a succession of relatively thin water bearing zones that presumably supplied most of the water to the well. The presence of these zones was evident at BMO-10GU because the well was screened at a shallow depth near the water table. The shallow construction and low permeability resulted in dewatering of a portion of the screened interval during the test, a necessary precondition for the development of seepage faces.

The thin water-bearing zones in the bedrock likely have higher conductivities due to fracturing, which would also imply relatively low effective porosities. Under these conditions, the rate of sulfate transport in these zones could be similar to the rate of transport in basin fill even though the rate of mass transport in bedrock may be substantially smaller because the average transmissivity of the bedrock is small compared to the basin fill.

In addition, background water level monitoring in the basin fill in the vicinity of BMO-4B indicated that variations in water level of a few tenths of a foot to more than 1 foot (that are only partially related to changes in barometric pressure) can occur in this area. Water level fluctuations in BMO-4B, screened from 500-600 ft bls, correlate poorly with water level fluctuations in NWC-03 CAP, screened only to a depth of 160 feet. The poor correlation indicates that changes in hydraulic head within the basin fill in this area can vary significantly with depth. These results imply that the permeability and the potential rate of sulfate transport within the basin fill may vary significantly with depth.

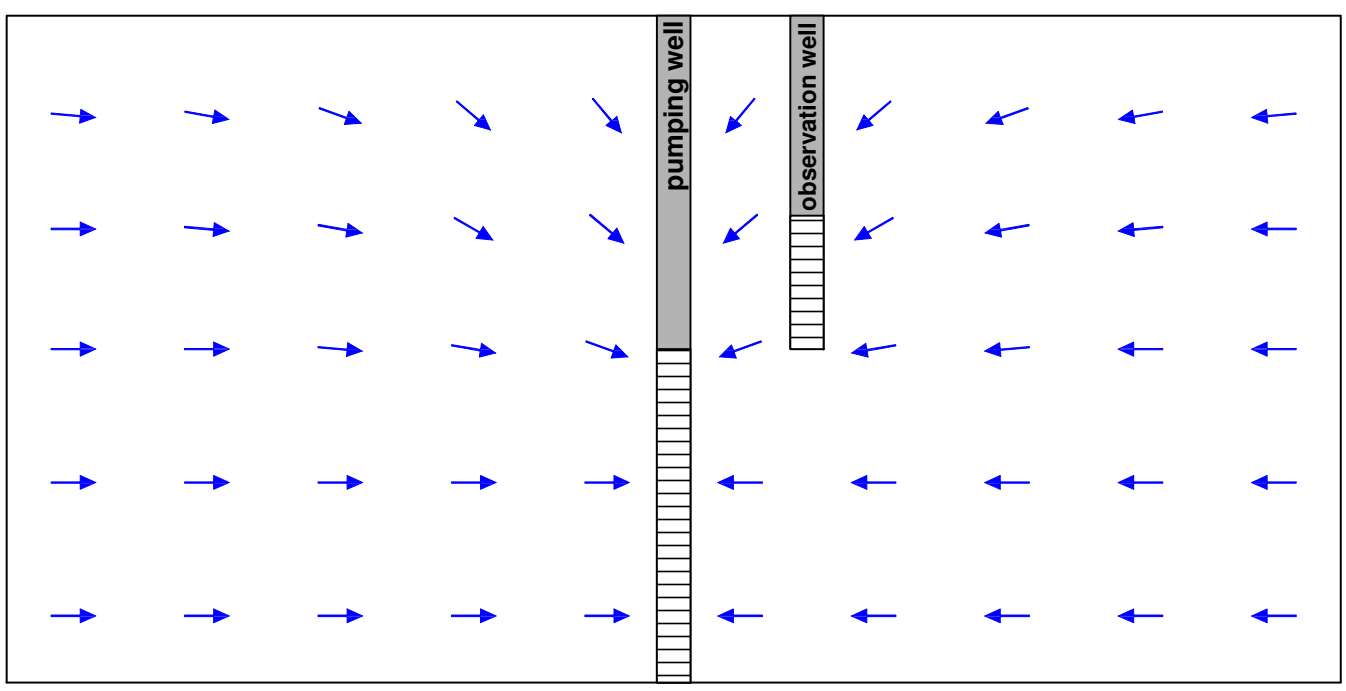
leakage from aquitard into aquifer

non-horizontal flow to well partially penetrating the aquifer

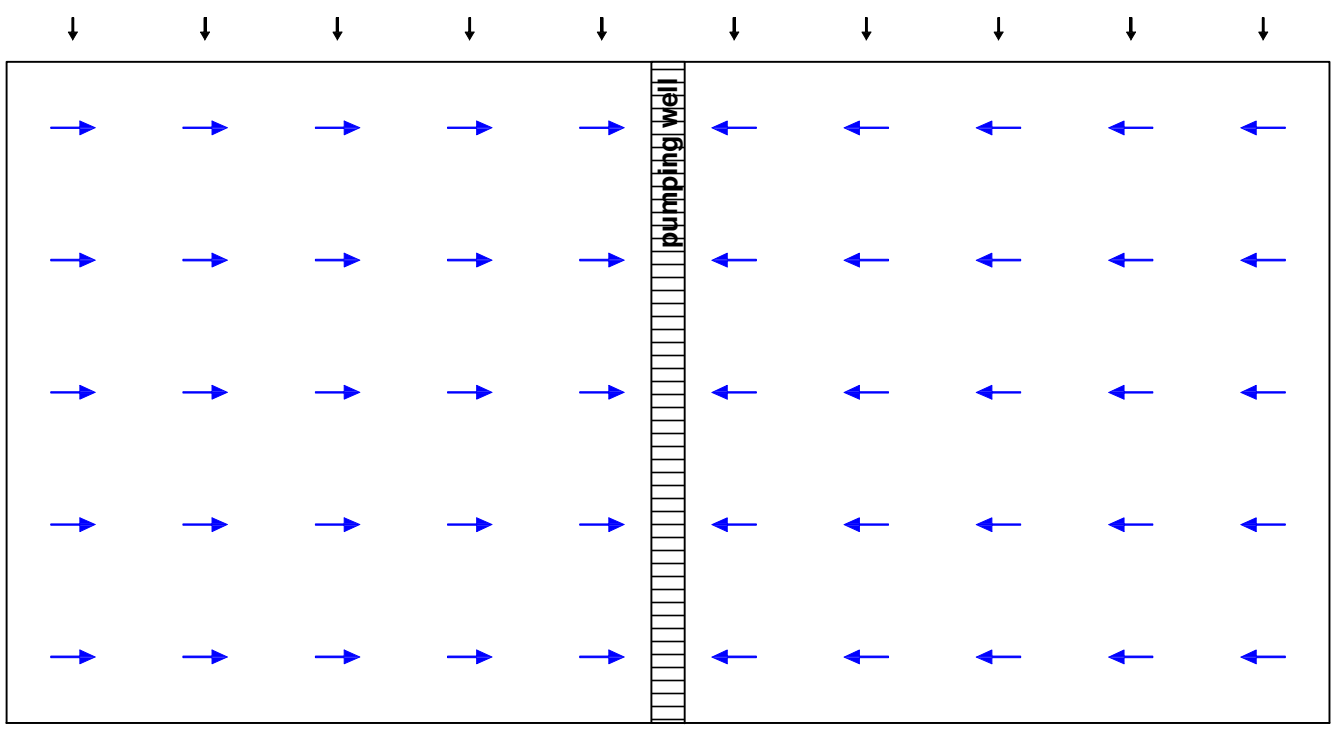
Partial Penetration Solution (with aquitard)



no aquitard (or leakage into aquifer)

non-horizontal flow to well partially penetrating the aquifer

Partial Penetration Solution (without aquitard)



leakage (if present) into aquifer

horizontal flow to well fully penetrating the aquifer

Homogeneous Solution

EXPLANATION

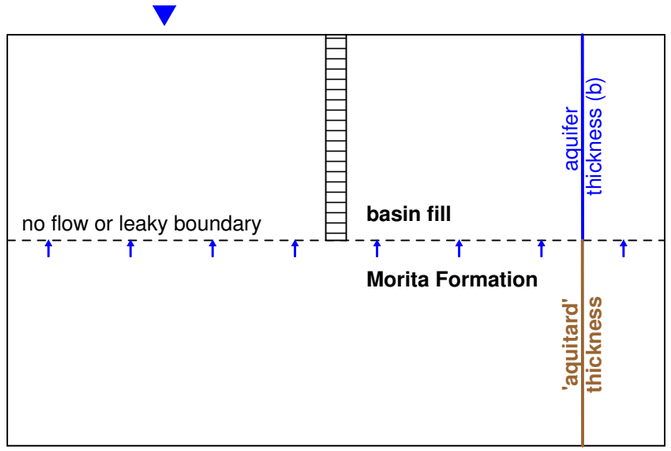
→ schematic flow direction within aquifer horizon

↓ schematic leakage into aquifer horizon

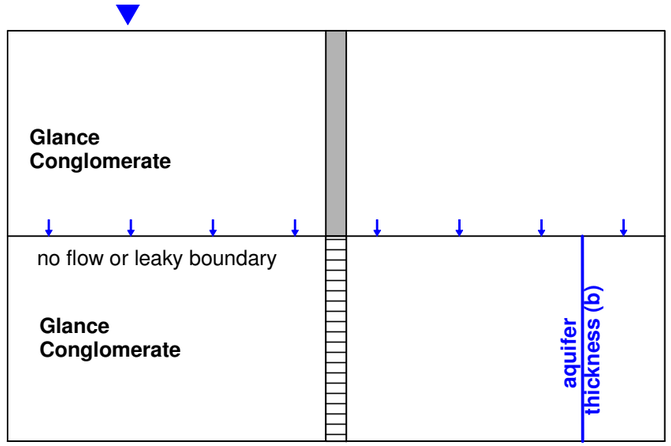
HYDRO GEO CHEM, INC.

SCHEMATIC DIAGRAM ILLUSTRATING THE PARTIAL PENETRATION AND HOMOGENEOUS AQUIFER SOLUTIONS

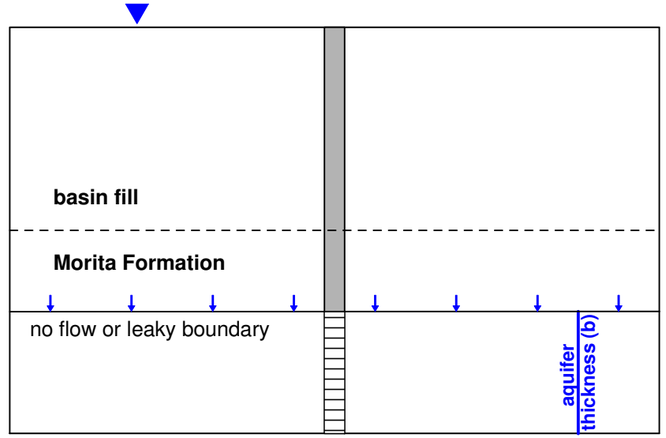
APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	P:/stewart/bisbee/pumptest/figure/schematic.srf	N.2



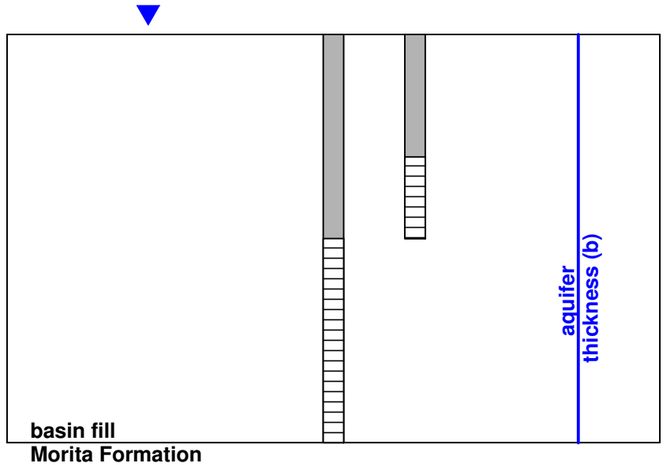
Application of the homogeneous aquifer solution to a well ully penetrating the basin fill with upward leakage from the Morita Formation (note: basin fill/Morita contact treated as no flow when leakage rate set to zero)



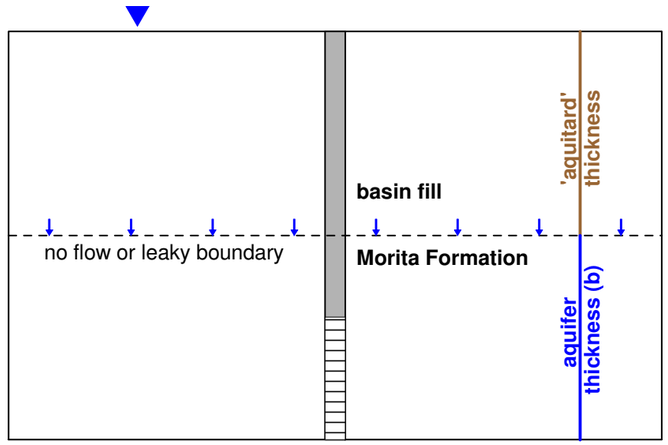
Application of the homogeneous aquifer solution to a well partially penetrating the Glance Conglomerate (note: upper aquifer boundary treated as no flow when leakage rate set to zero)



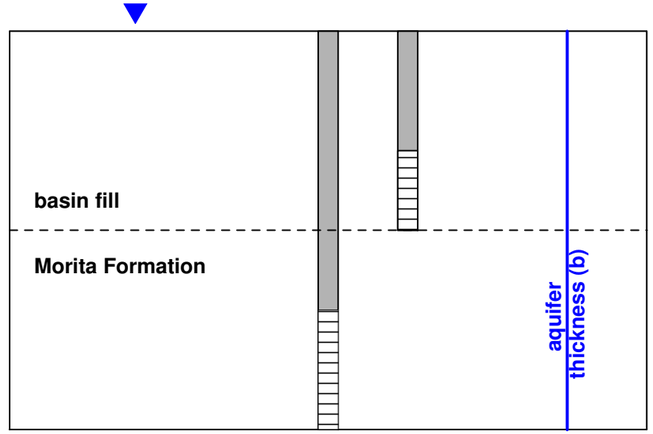
Application of the homogeneous aquifer solution to a well partially penetrating the Morita Formation showing leakage from the upper Morita into the assumed aquifer horizon (note: assumed upper aquifer boundary treated as no flow when leakage rate set to zero)



Application of the partial penetration solution to wells partially penetrating the basin fill (note: basin fill/Morita contact is treated as no flow in this example)



Application of the partial penetration solution to a well partially penetrating the Morita Formation showing leakage from the basin fill into the assumed aquifer horizon (note: basin fill treated as a leaky 'aquitard' source of water



Application of the partial penetration solution to a well partially penetrating the Morita Formation treating the basin fill and the portion of the Morita penetrated by the well as part of the assumed aquifer horizon

EXPLANATION

well schematic showing screened interval

schematic leakage into assumed aquifer horizon

piezometric surface (water table if unconfined)

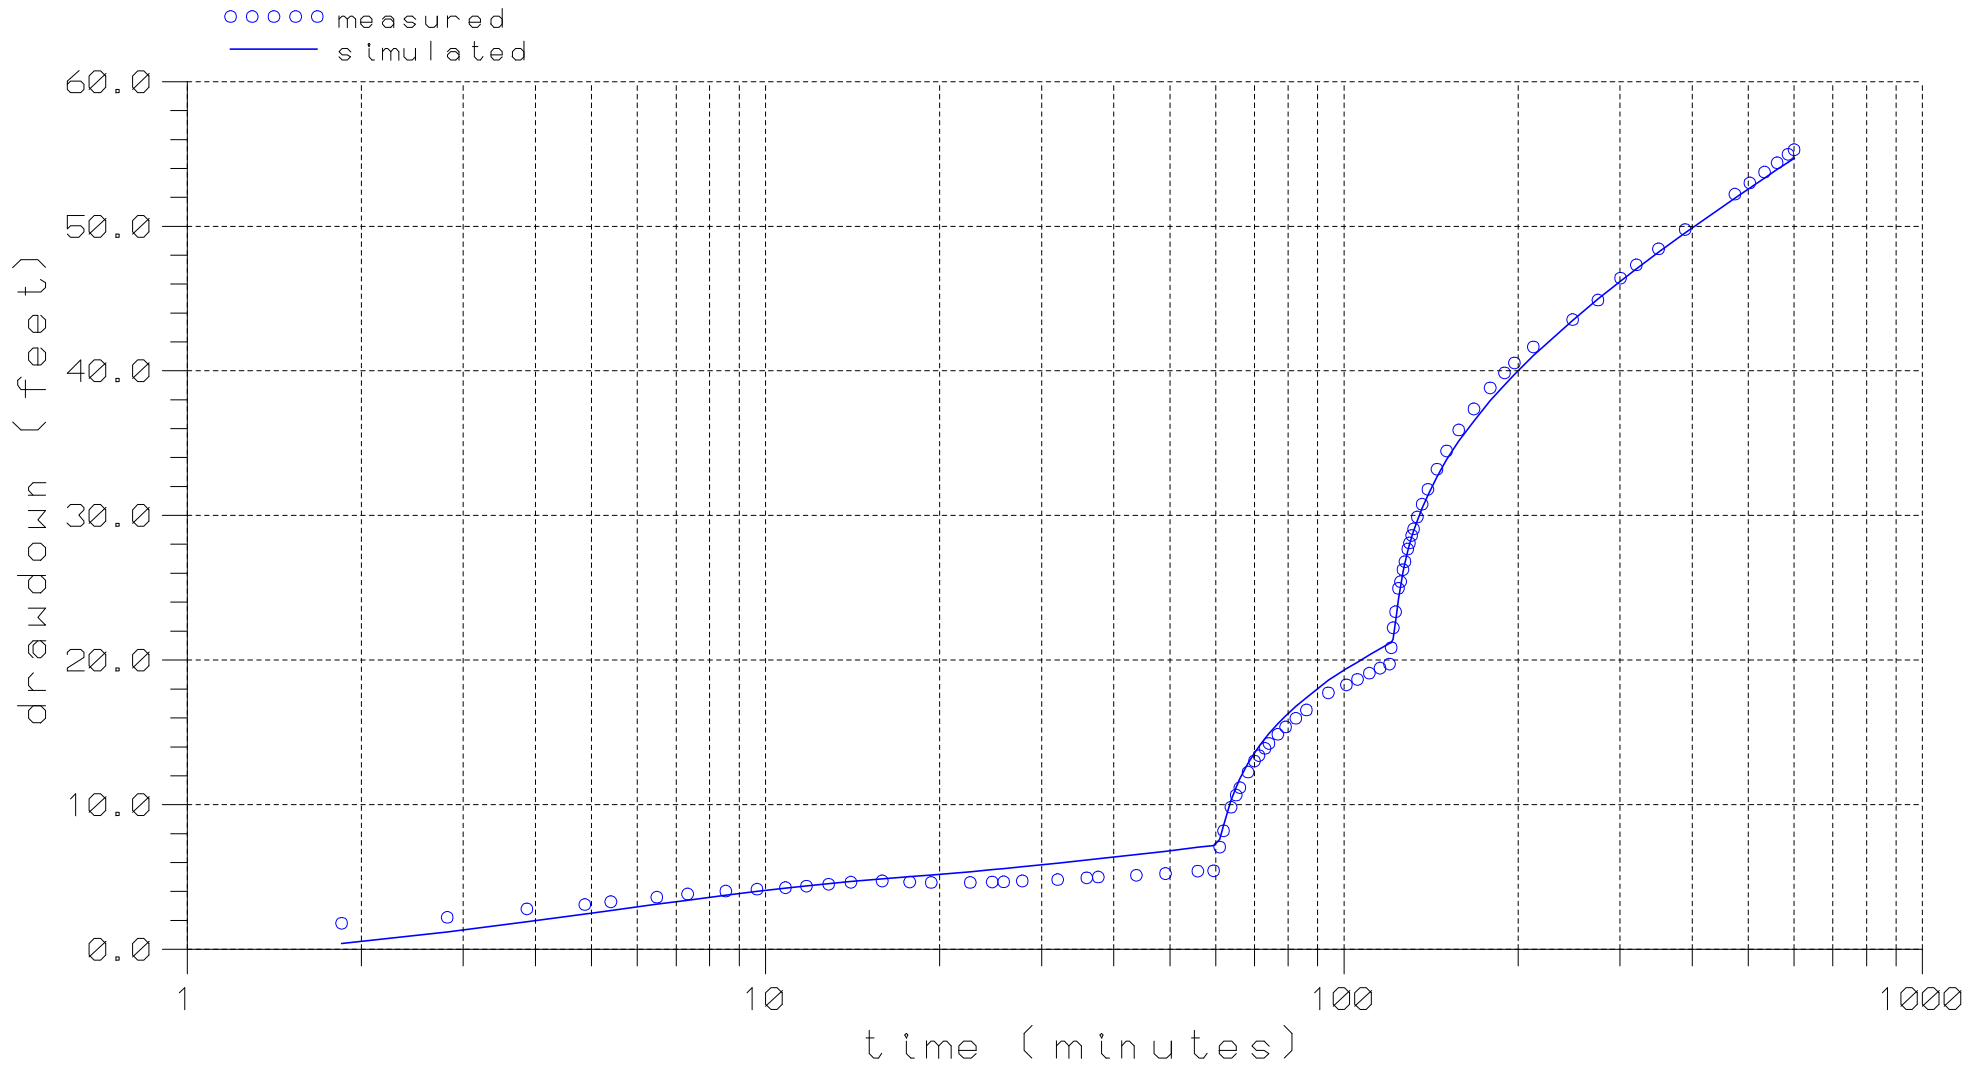
MEASURED AND SIMULATED DRAWDOWNS AT BMO-8B DURING PUMPING AT APPROXIMATELY 15, 30, AND 53 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8B/whip/bmo8b.srf	**N.38**



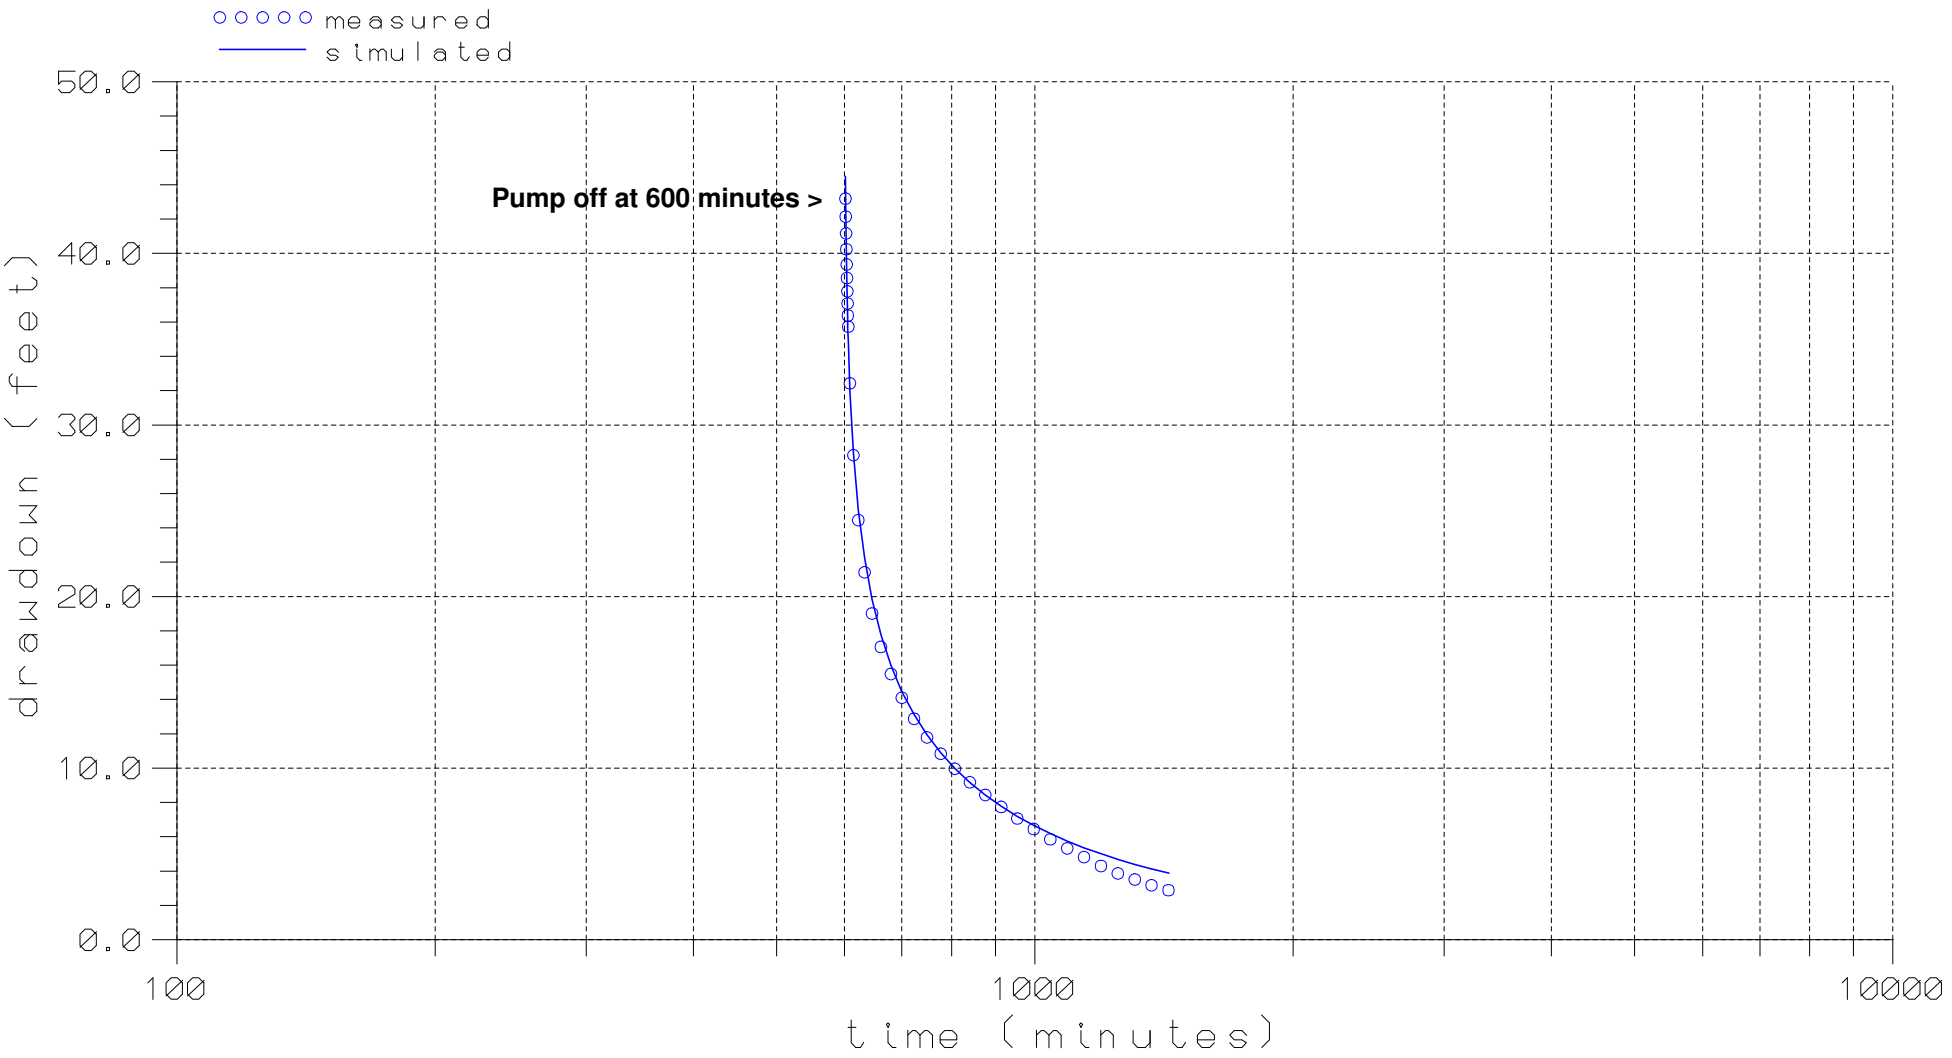
RESULTS

Transmissivity = 115 ft2/day
Storage coefficient = 0.396
Vertical Hydraulic Conductivity = 1.e-5 ft/day
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 725 ft
effective well radius/casing radius = 1.0 / 0.208

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-8M DURING PUMPING AT APPROXIMATELY 3, 8.3, AND 14 GPM USING HAND COLLECTED DATA

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8M/whip/bmo8m.srf	**N.39**



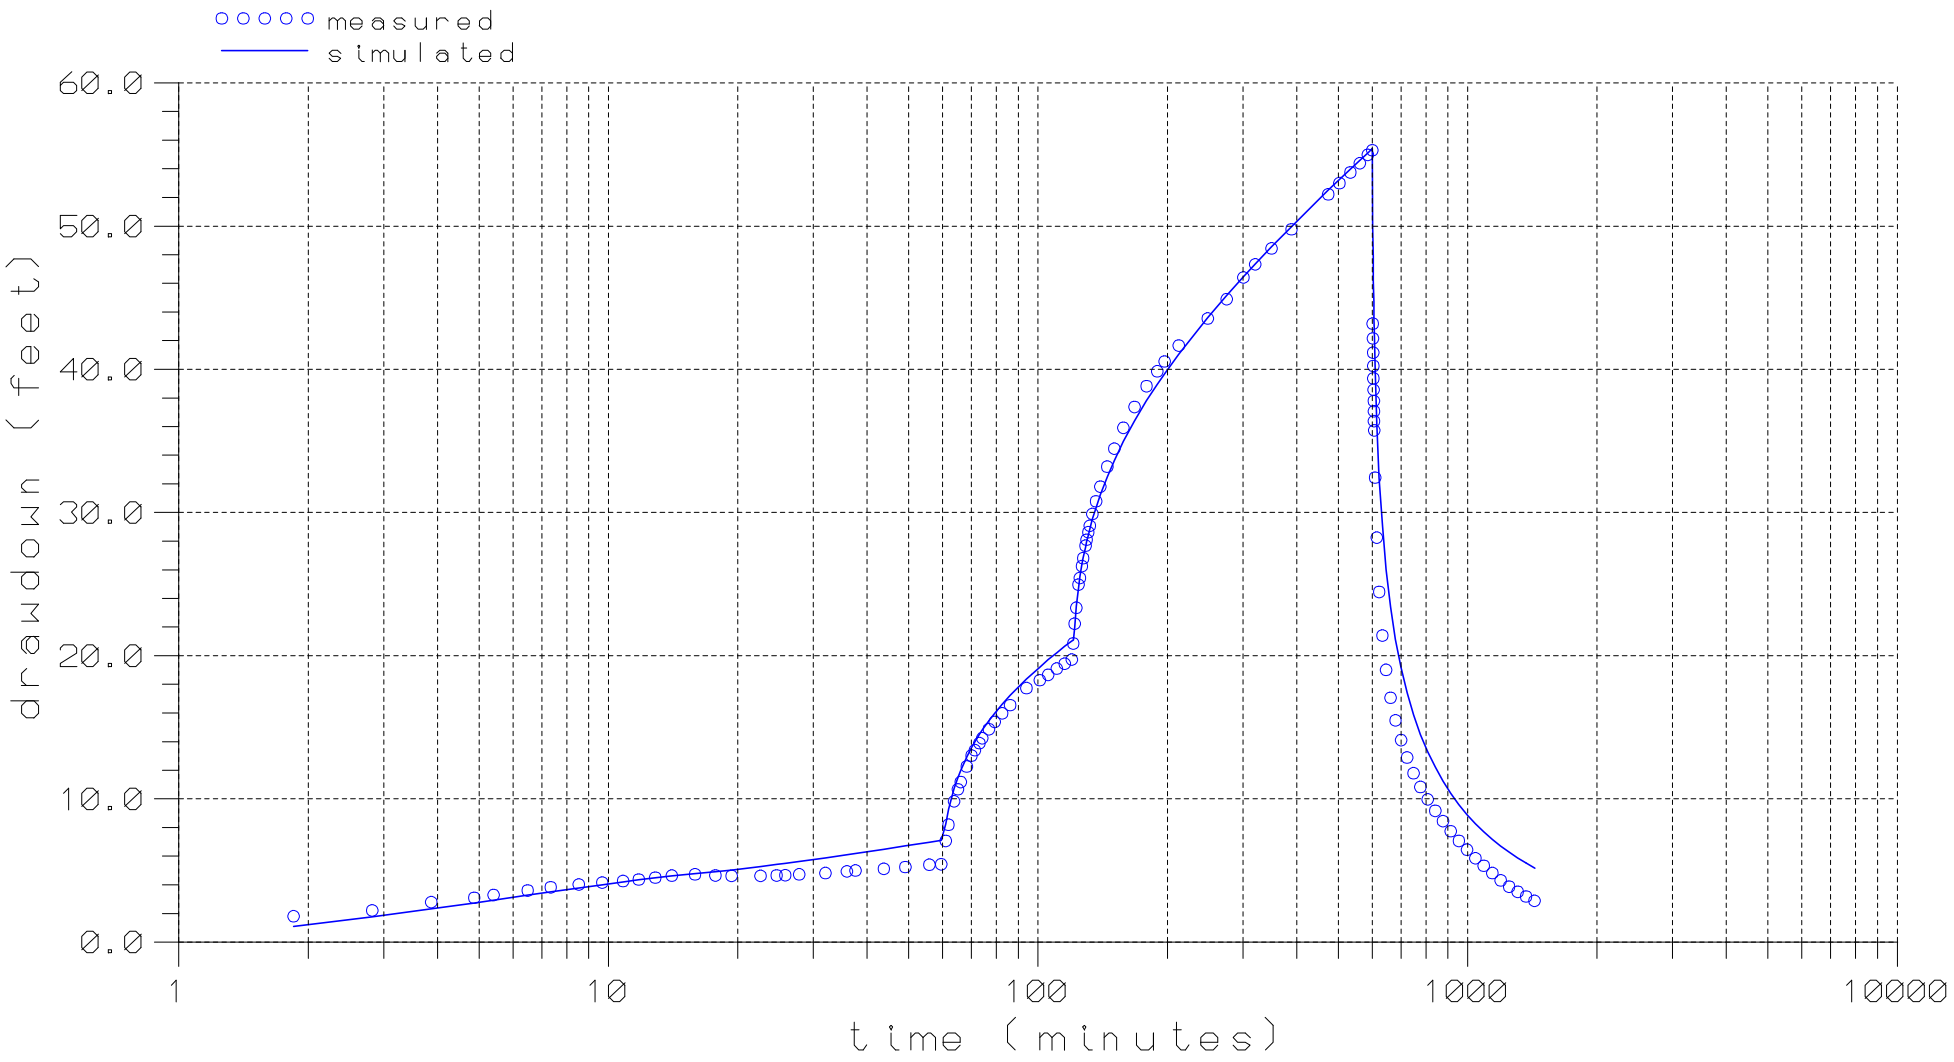
RESULTS

Transmissivity = 146 ft2/day
Storage coefficient = 0.116
Vertical Hydraulic Conductivity = 1.e-5 ft/day
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 725 ft
effective well radius/casing radius = 1.0 / 0.208

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED RECOVERY AT BMO-8M USING AUTOMATICALLY LOGGED DATA

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8M/whip/bmo8mr.srf	**N.40**



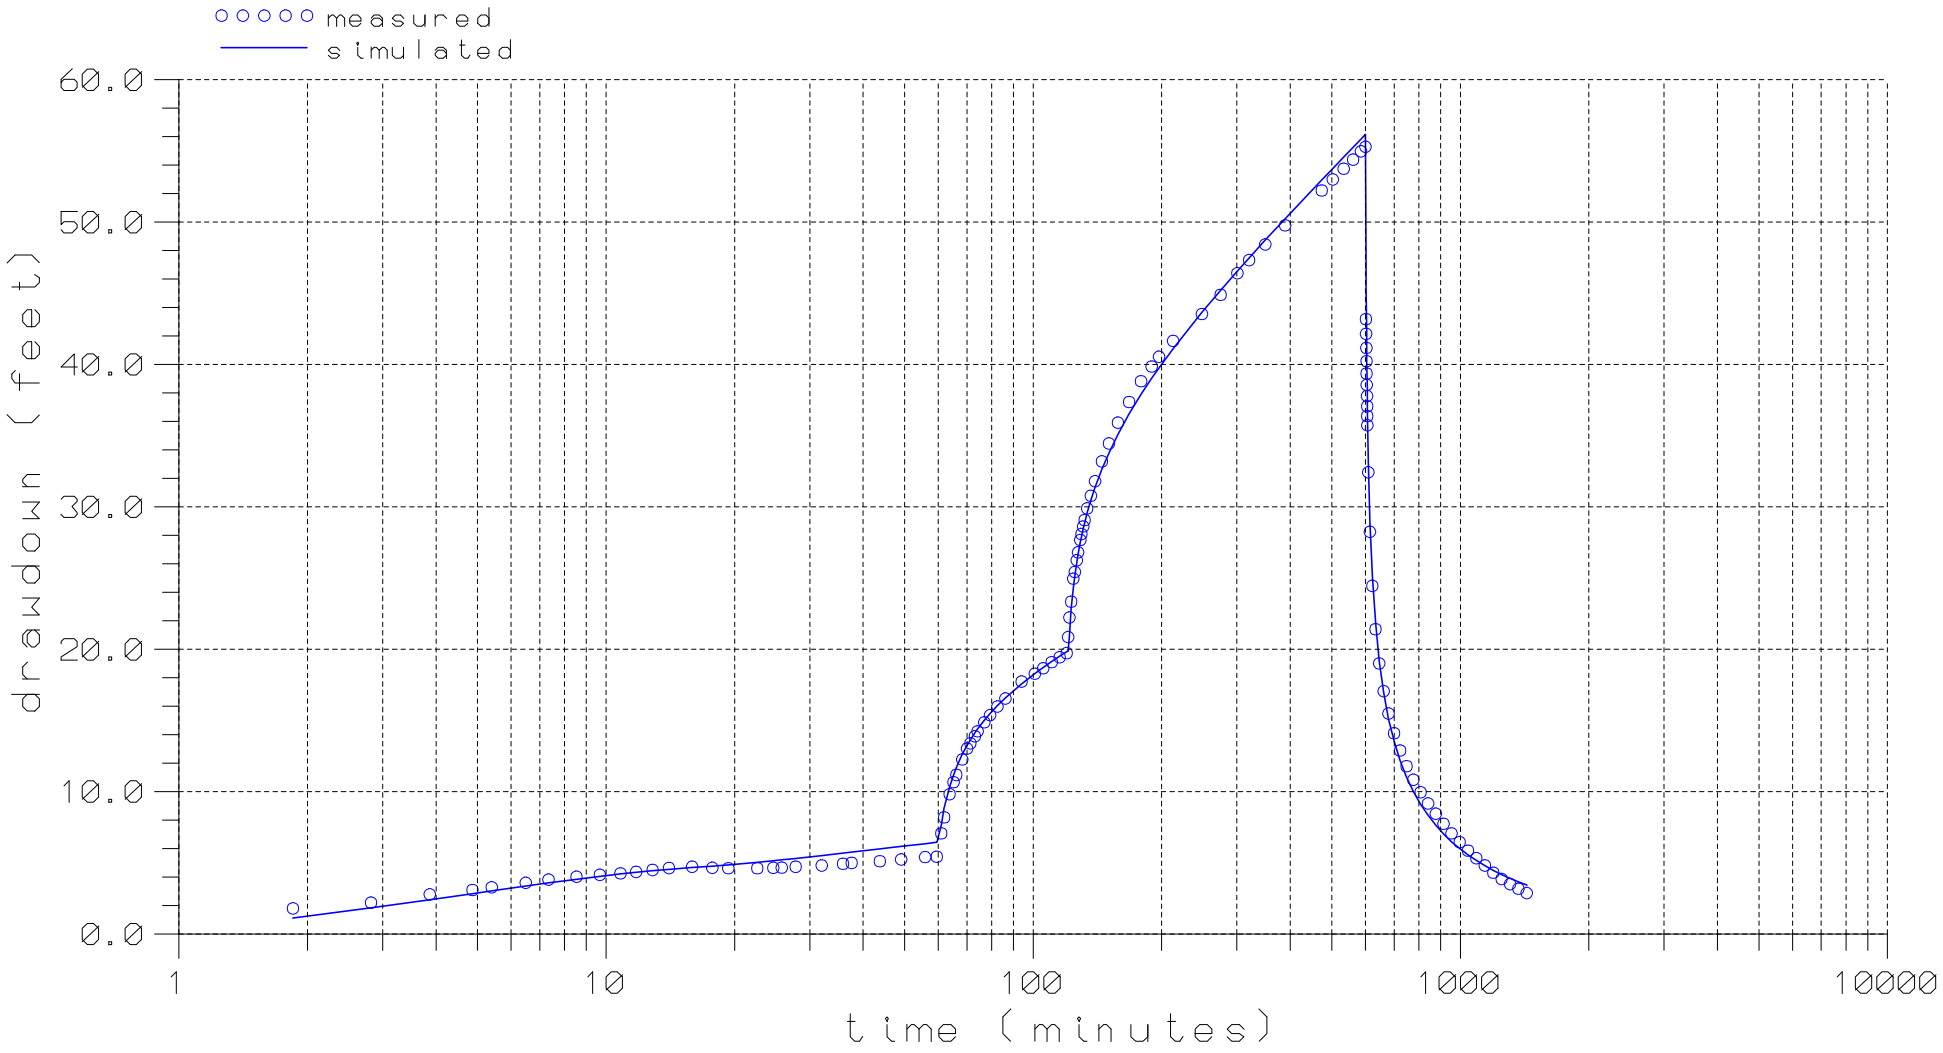
RESULTS

Transmissivity = 20 ft2/day
Storage coefficient = 0.482
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 135 ft
effective well radius/casing radius = 0.43 / 0.301

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-8M DURING PUMPING AT APPROXIMATELY 3, 8.3, AND 14 GPM USING HAND COLLECTED AND AUTOMATICALLY LOGGED DATA
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8M/whip/bmo8mf.srf	**N.41**



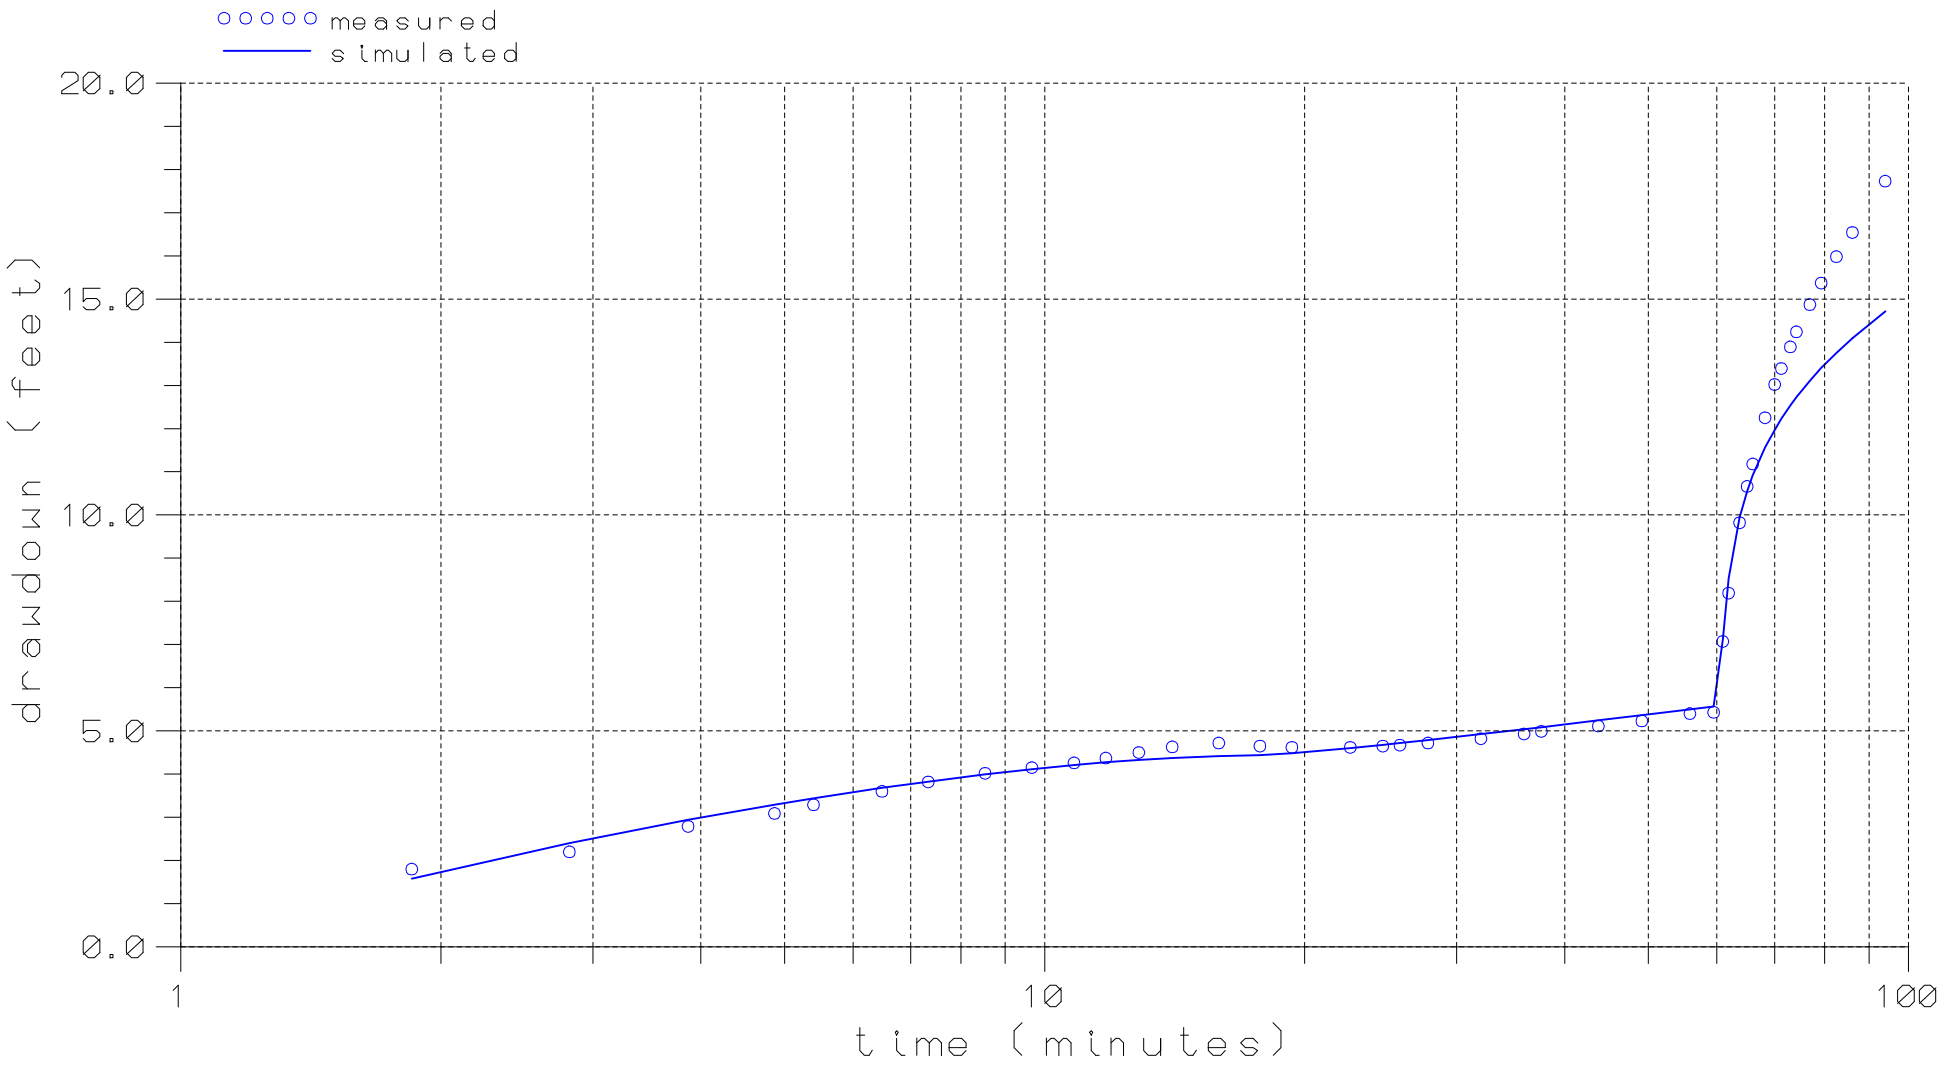
RESULTS
(using Dupuit correction)

Transmissivity = 31.2 ft2/day
Storage coefficient = 0.355
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 135 ft
effective well radius/casing radius = 0.331 / 0.301

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-8M DURING PUMPING AT APPROXIMATELY 3, 8.3, AND 14 GPM USING AUTOMATICALLY LOGGED AND HAND COLLECTED DATA
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8M/whip/bmo8mfd.srf	**N.42**



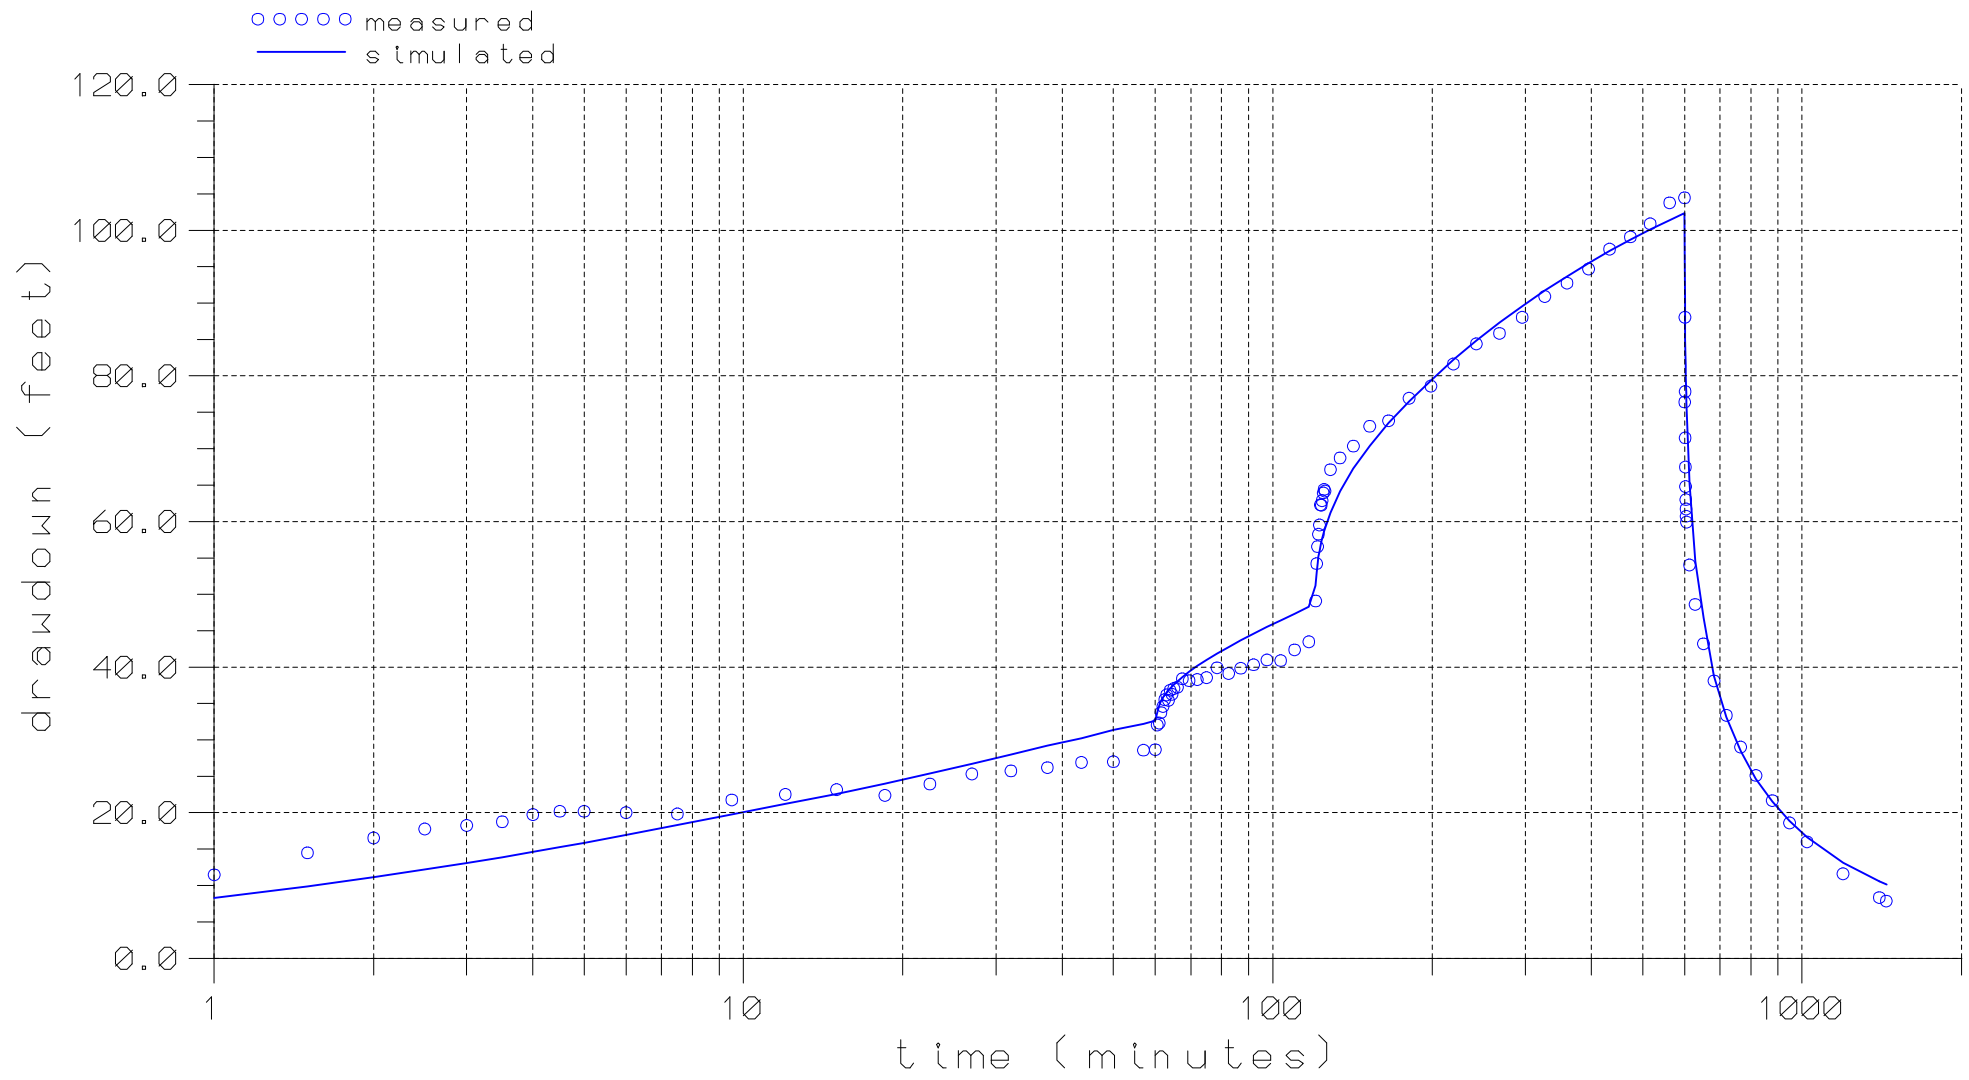
RESULTS

Transmissivity = 220 ft2/day
Storage coefficient = 0.146
Vertical Hydraulic Conductivity = 1.e-3 ft/day
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 725 ft
effective well radius/casing radius = 1.0 / 0.208

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-8M DURING PUMPING AT APPROXIMATELY 3, AND 8.3 GPM (ANALYSIS OF STEP 1 HAND COLLECTED DATA ONLY)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-8M/whip/bmo8mst1.srf	**N.43**



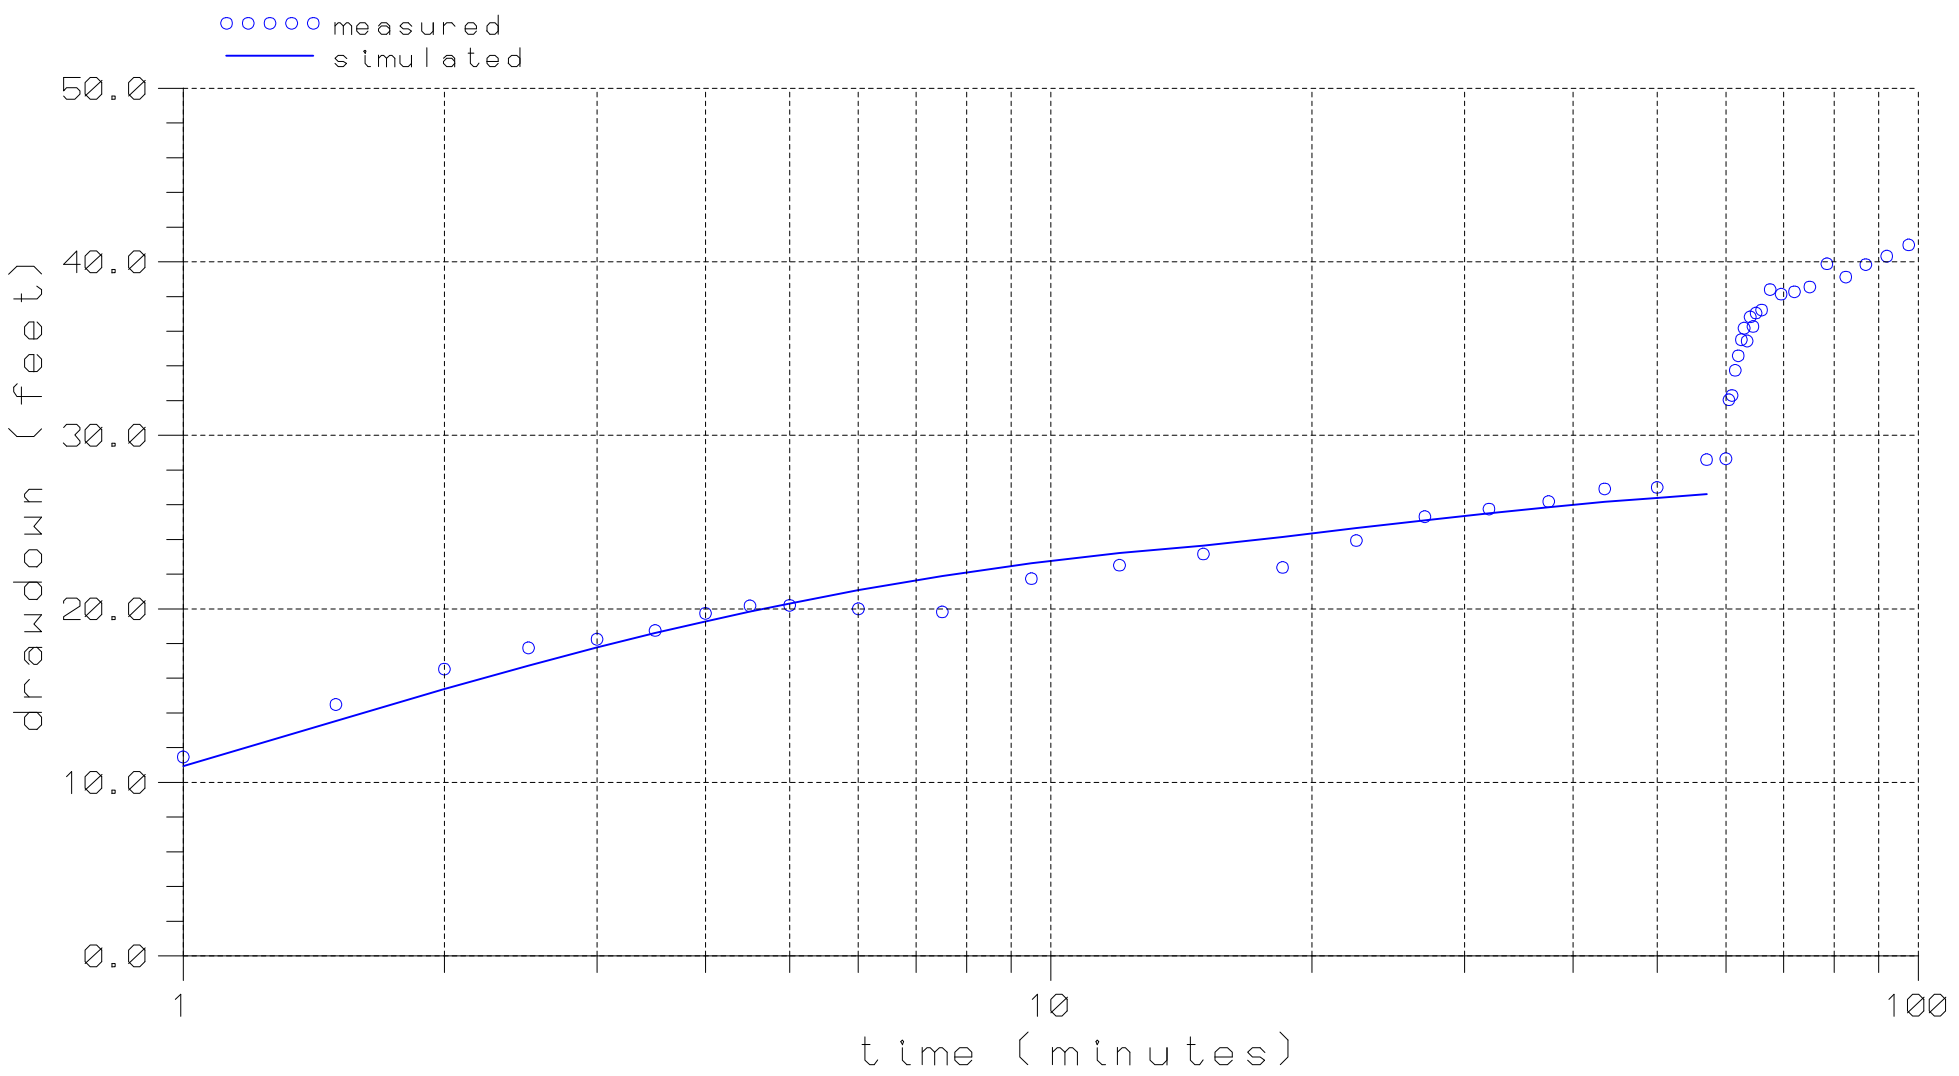
RESULTS

Transmissivity = 27.6 ft2/day
Storage coefficient = 0.24
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 130 ft
effective well radius/casing radius = 0.811 / 1.16e-3 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-9M DURING PUMPING AT APPROXIMATELY 20, 25 , AND 38 GPM WITH EMPHASIS ON STEP 3 AND RECOVERY DATA
(analysis using WHIP)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-9M/whip/bmo9mfp.srf	**N.44**



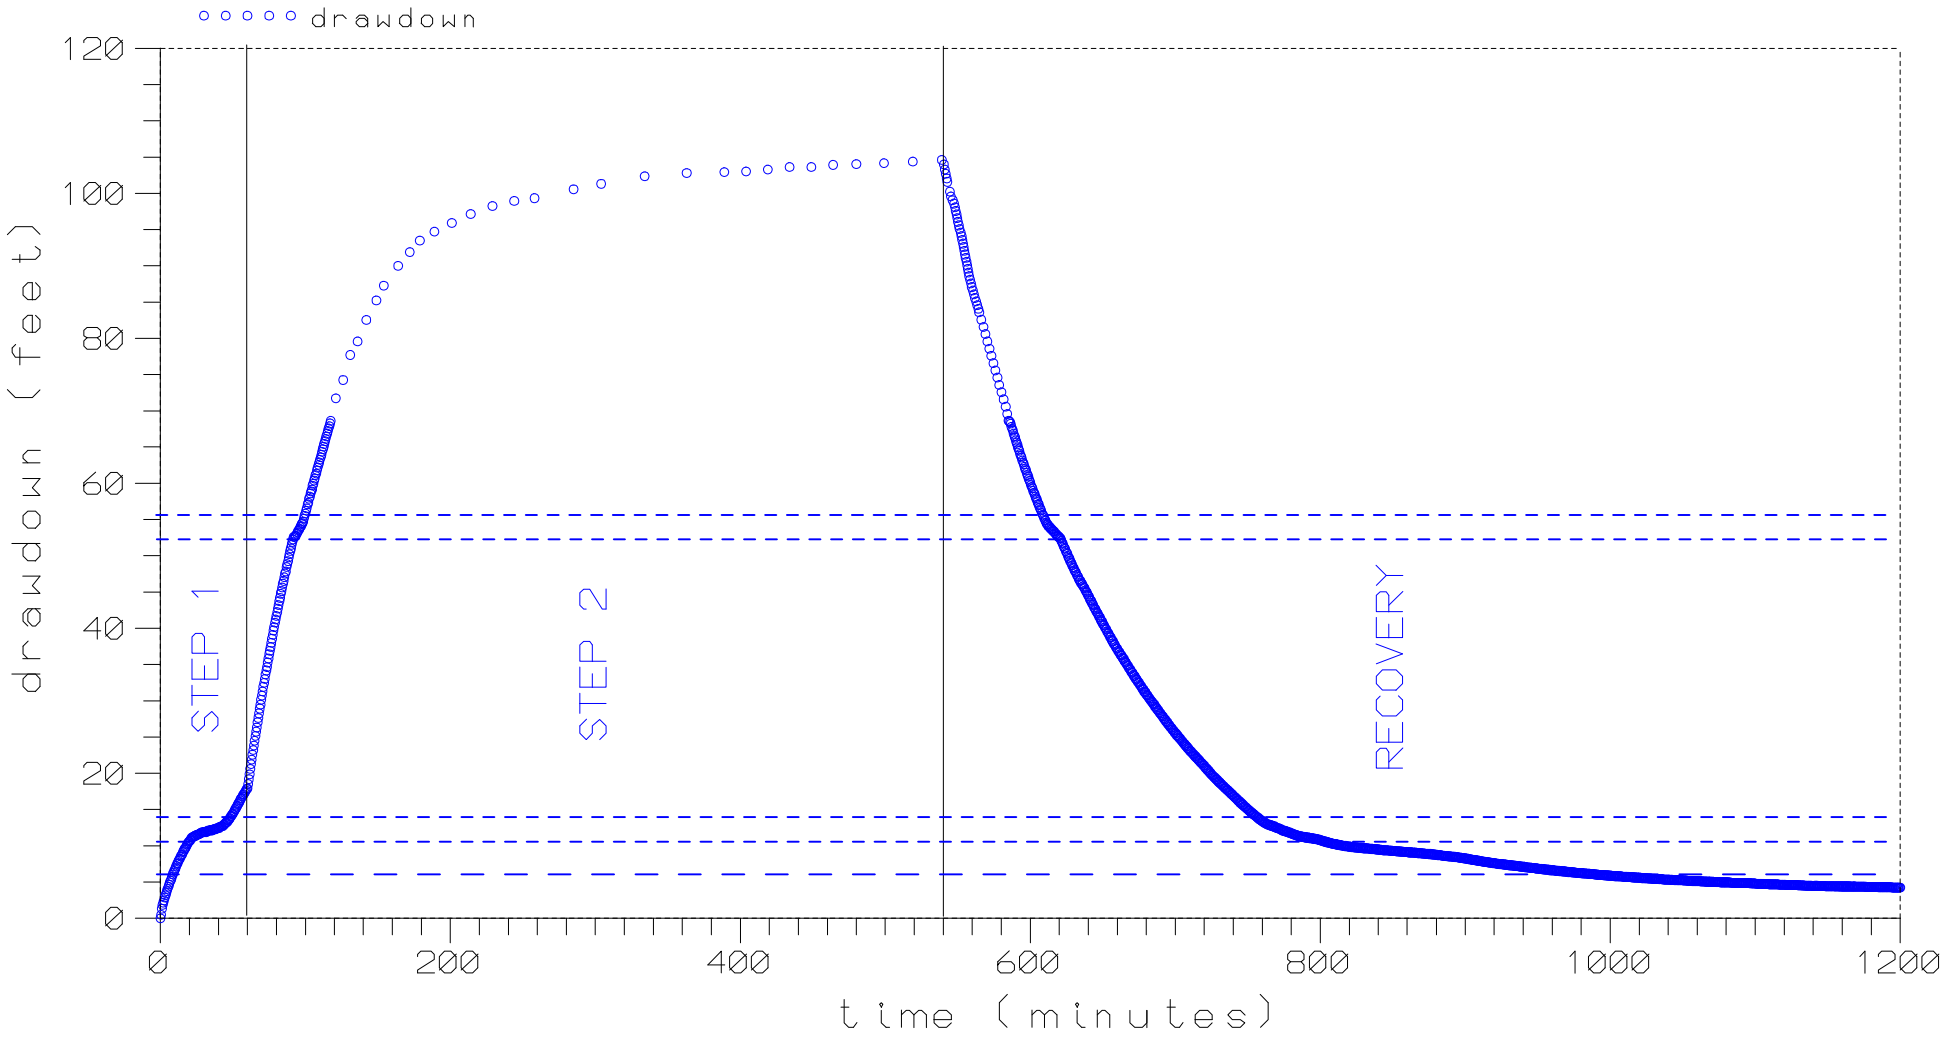
RESULTS

Transmissivity = 101 ft2/day
Storage coefficient = 0.0214
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 130 ft
effective well radius/casing radius = 0.208 / 0.208 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-9M DURING PUMPING AT APPROXIMATELY 20, AND 25 GPM (ANALYSIS OF STEP 1 DATA ONLY)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-9M/whip/bmo9mst1.srf	N.45

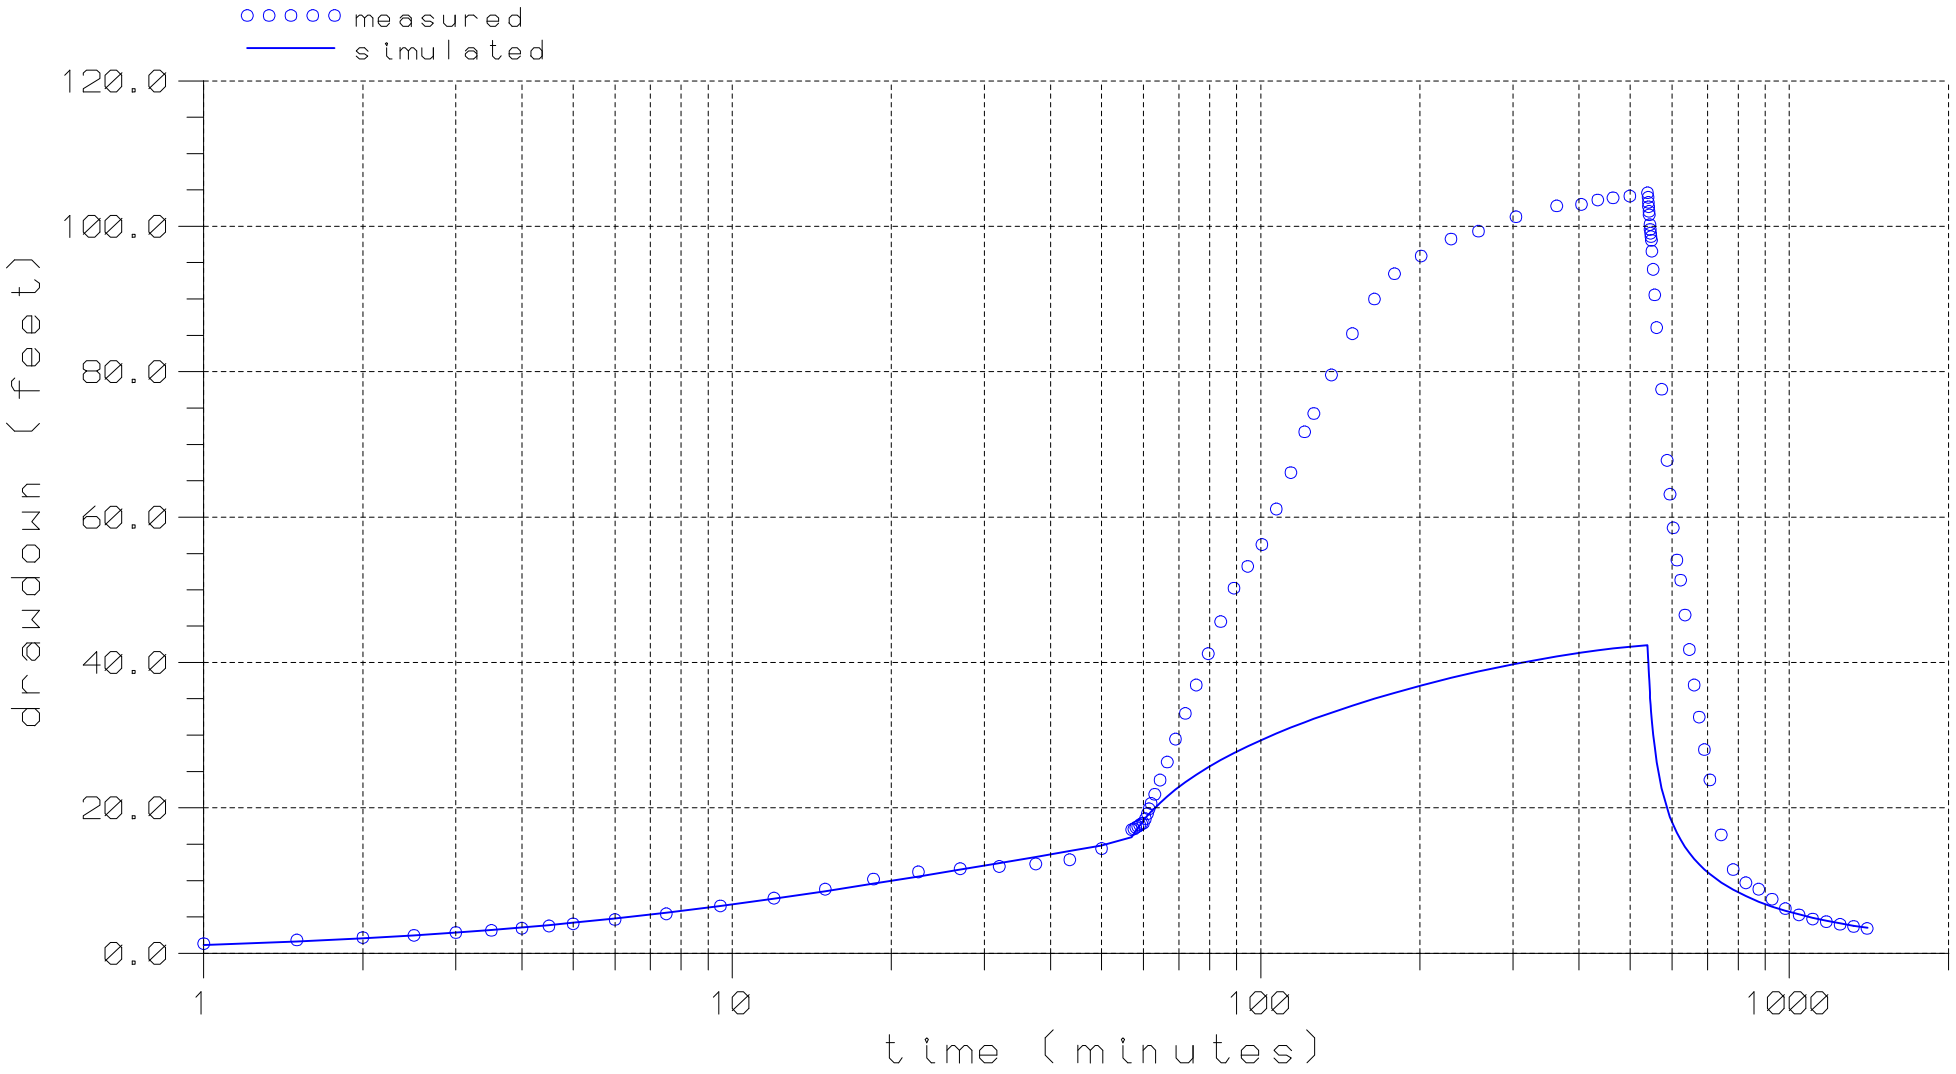


NOTE: dashed lines indicate discontinuities in the drawdown and recovery data

HYDRO GEO CHEM, INC.

MEASURED DRAWDOWNS AT BMO-10GU DURING PUMPING AT APPROXIMATELY 1.4 AND 2.3 GPM WITH DISCONTINUITIES INDICATED

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-10GU/whip/b10guraw.srf	**N.46**



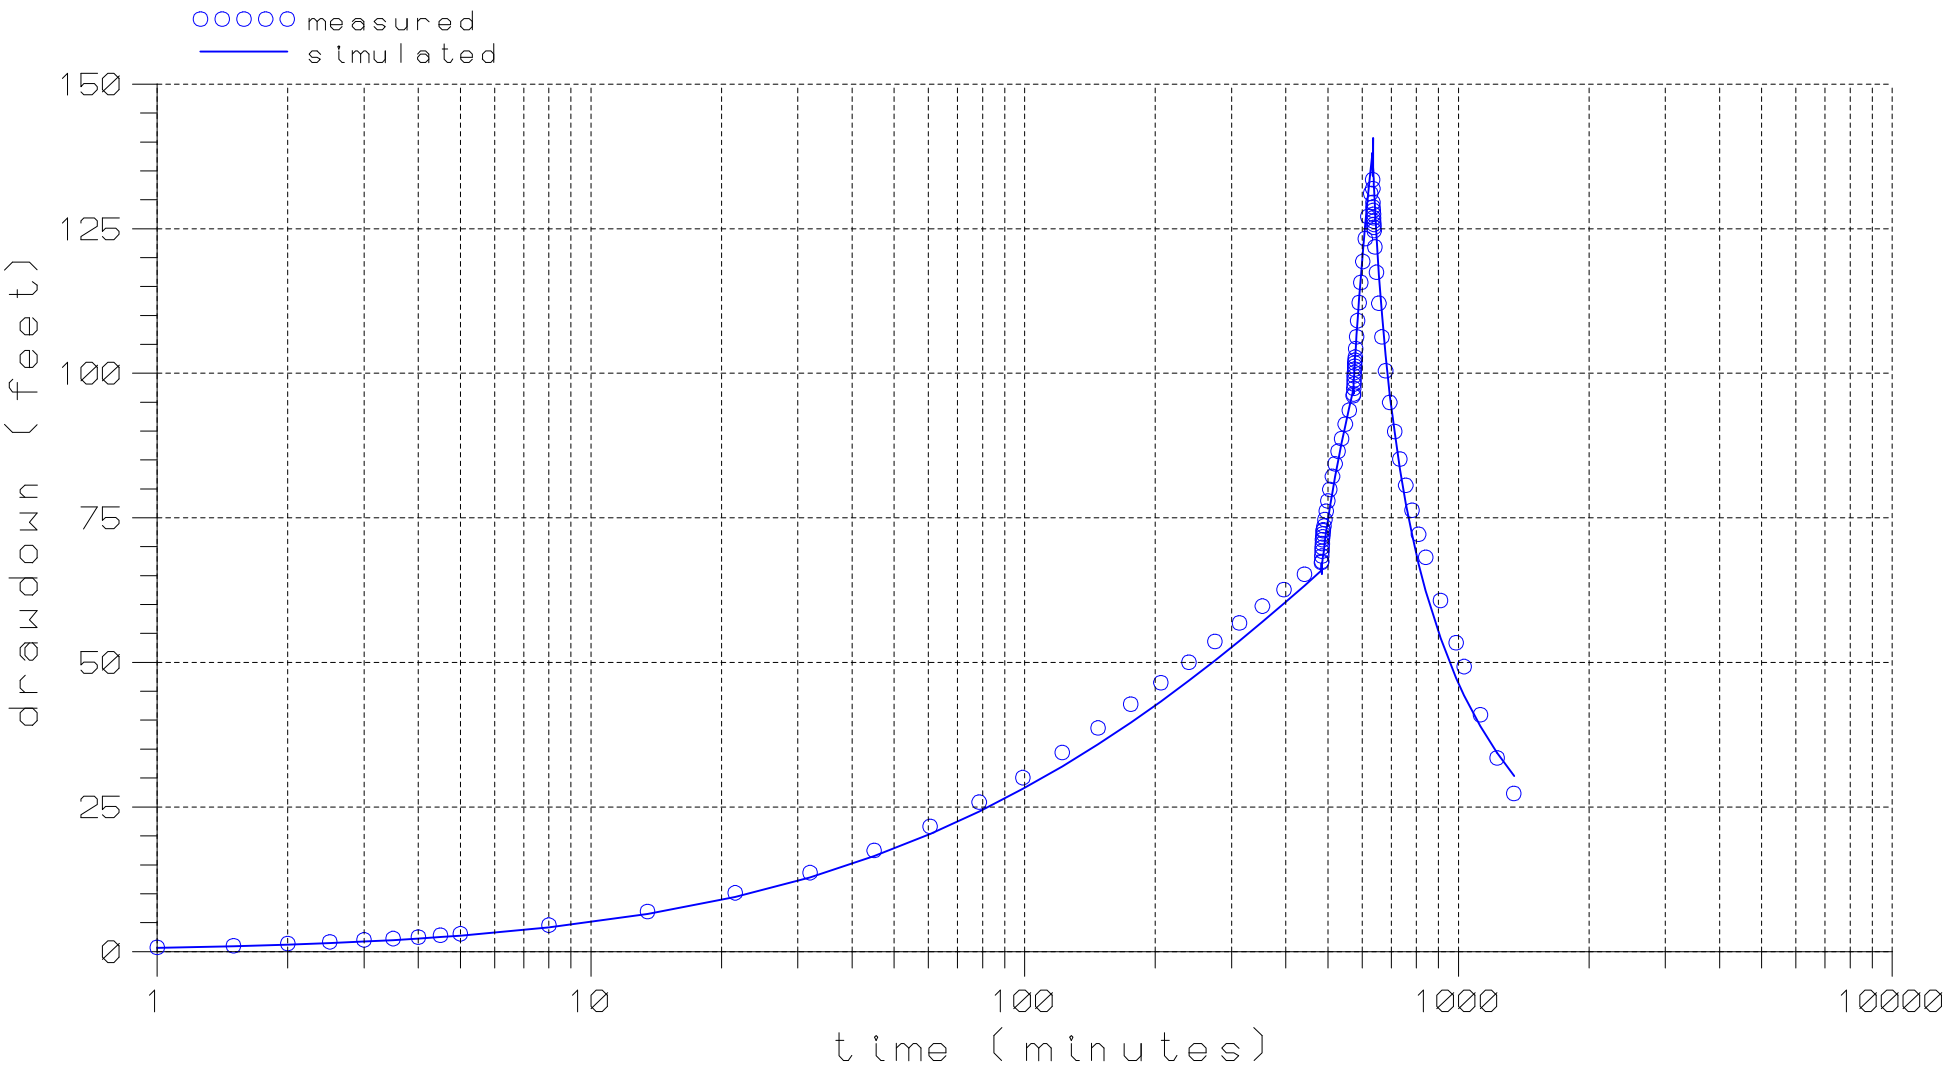
RESULTS

Transmissivity = 4.92 ft2/day
Storage coefficient = 0.21
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 140 ft
effective well radius/casing radius = 0.208 / 0.208 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-10GU DURING PUMPING AT APPROXIMATELY 1.4 AND 2.3 GPM WITH EMPHASIS ON STEP 1 AND LATE RECOVERY DATA
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-10GU/whip/b10gufs1.srf	**N.47**



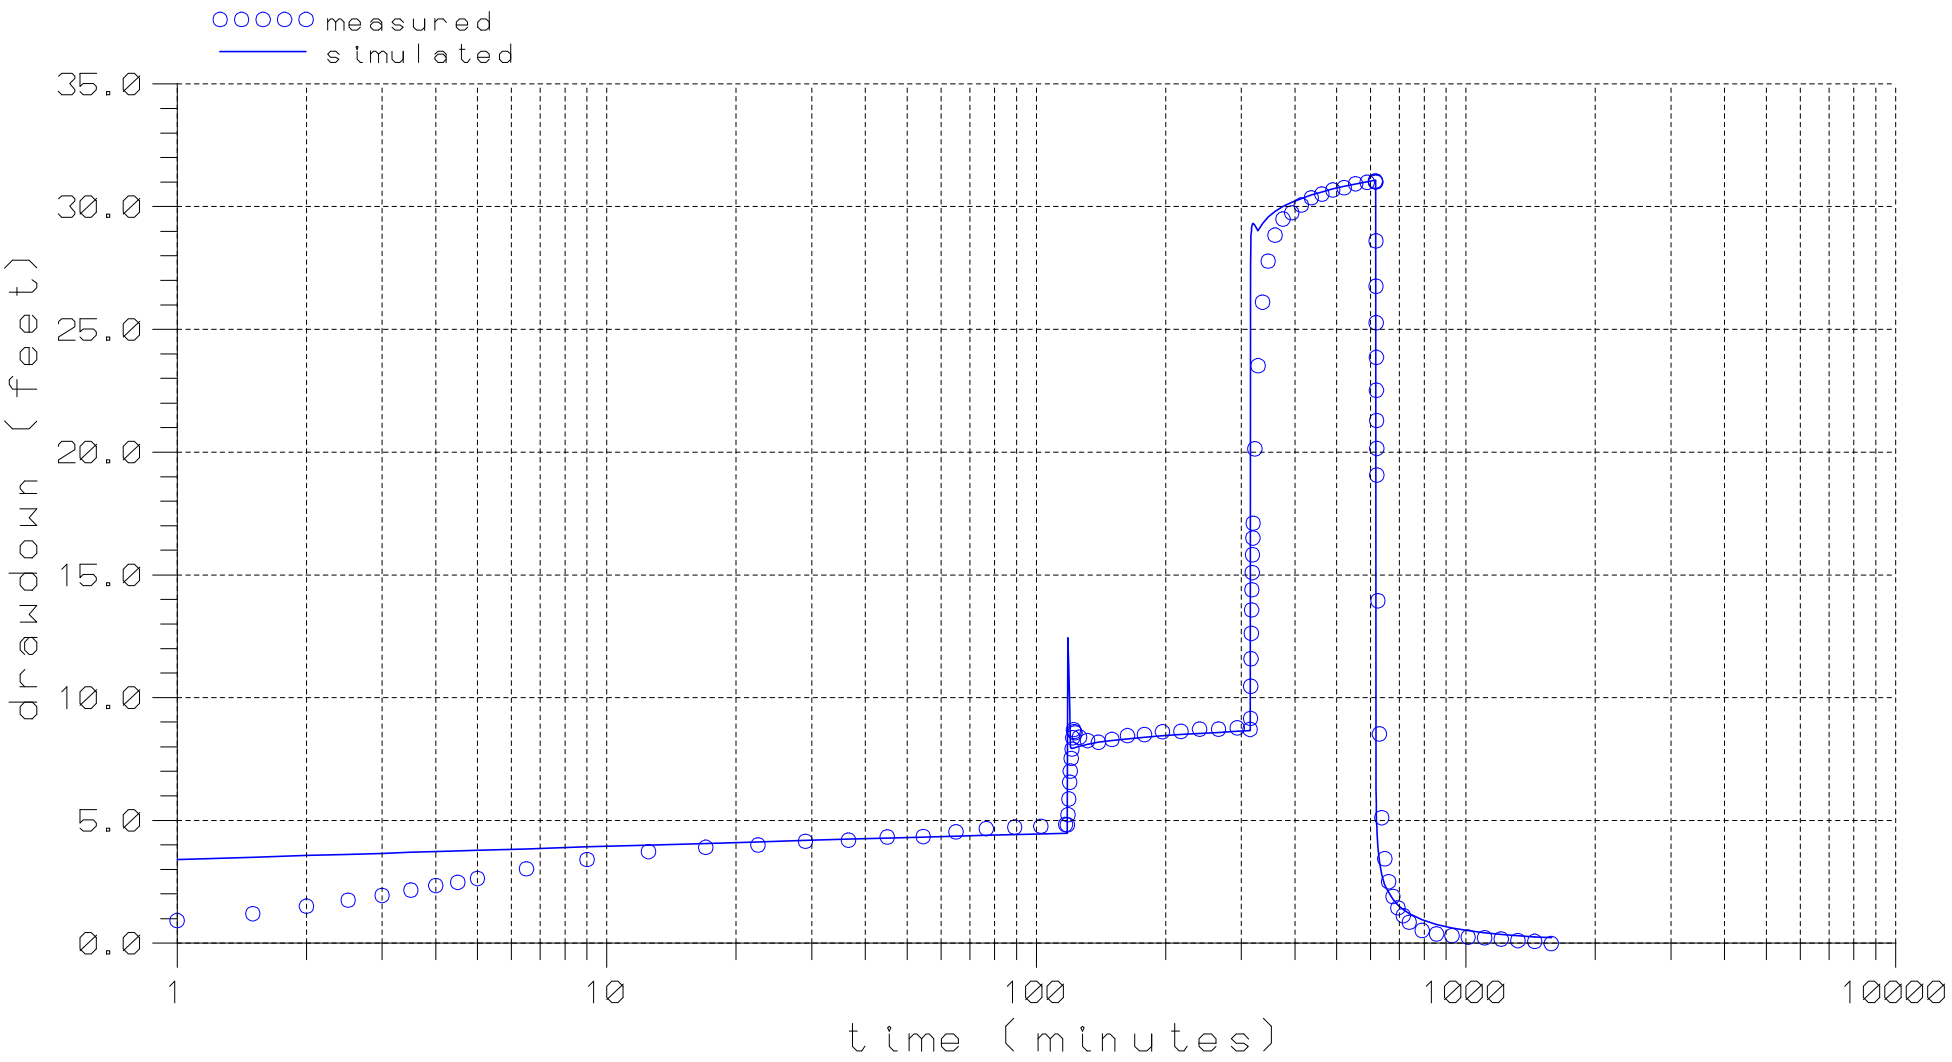
RESULTS

Transmissivity = 0.451 ft2/day
Storage coefficient = 1.38e-2
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 135 ft
effective well radius/casing radius = 2.36 / 0.259 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-10GL DURING PUMPING AT APPROXIMATELY 1.1, 2.2, AND 3.6 GPM
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-10GL/whip/bmo10glf.srf	**N.48**



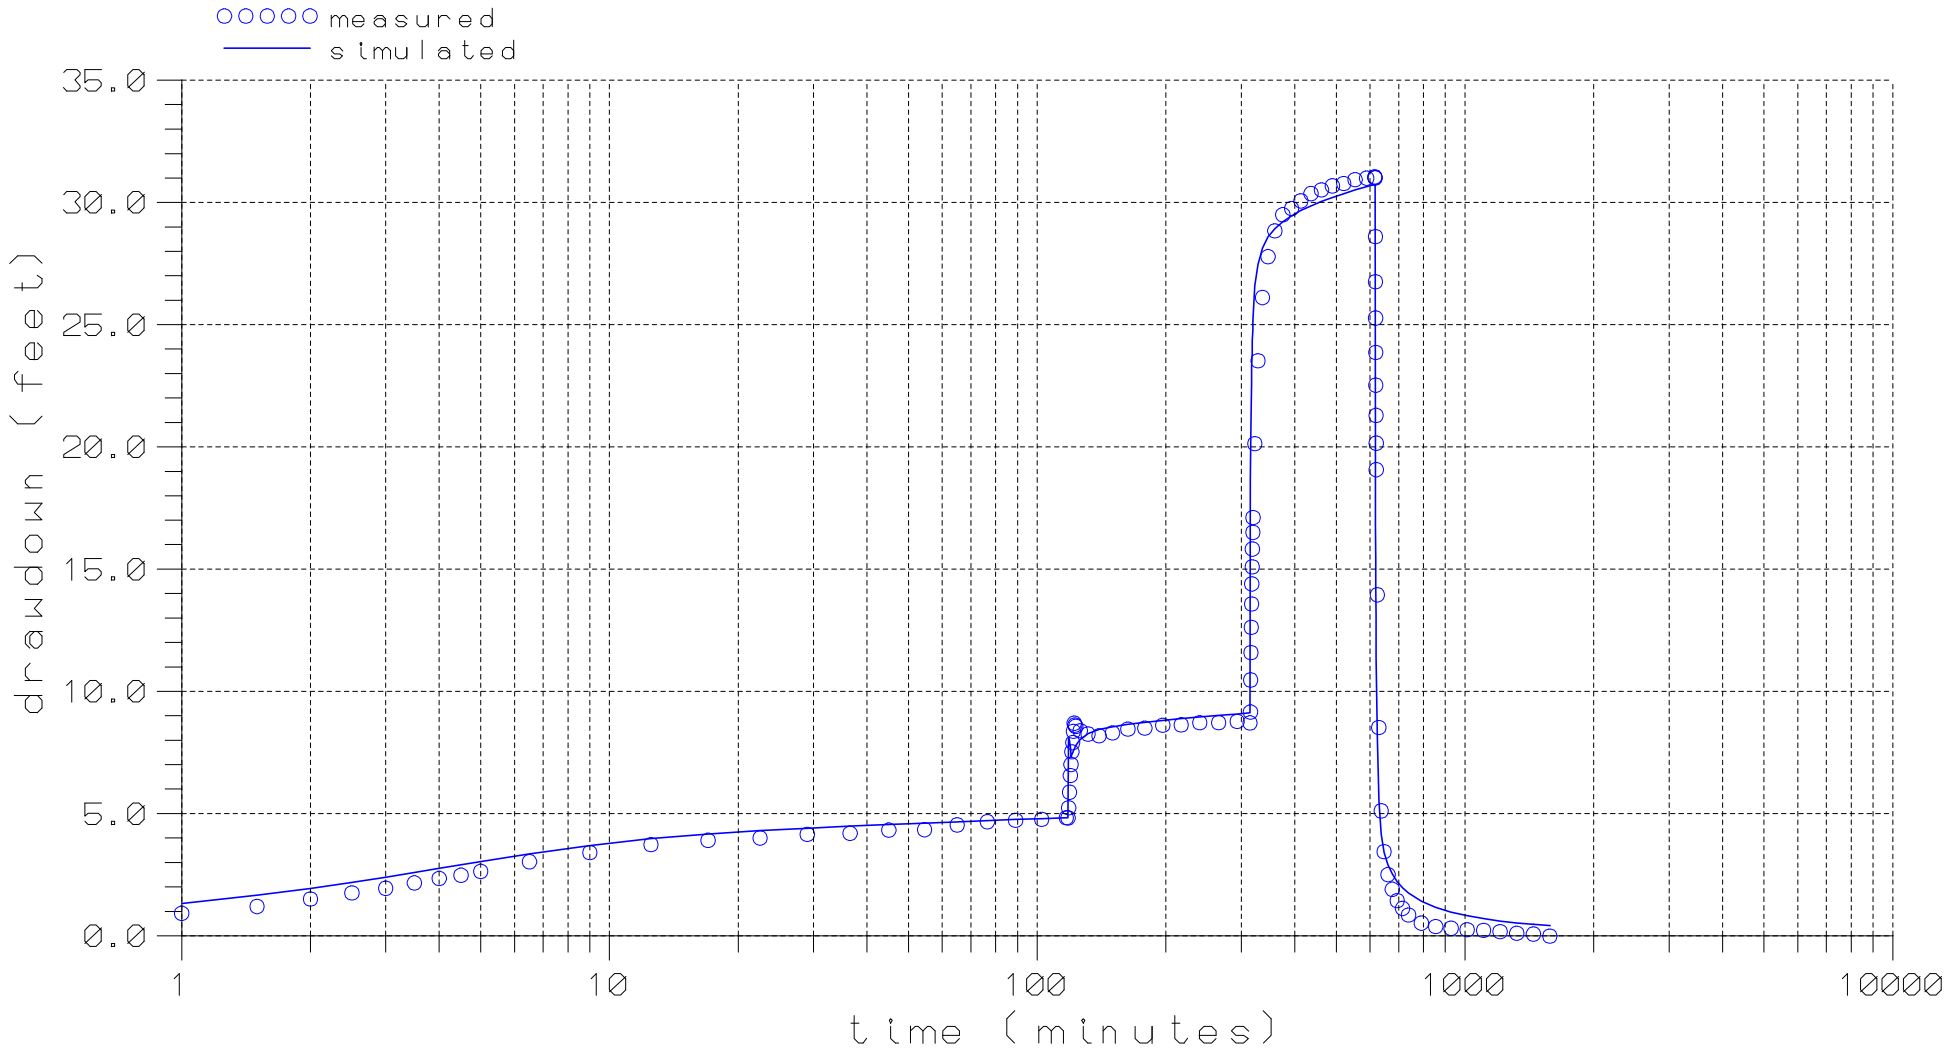
RESULTS

Transmissivity = 115 ft2/day
Storage coefficient = 1.0e-4
Vertical Hydraulic Conductivity = 0.01 ft/day
well loss constant = 0.9
well loss exponent = 1.78
assumed aquifer thickness = 325 ft
effective well radius/casing radius = 0.208 / 0.208 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-11GL DURING PUMPING AT APPROXIMATELY 1.0, 1.7, AND 4.6 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-11G/whip/bmo11g.srf	**N.49**



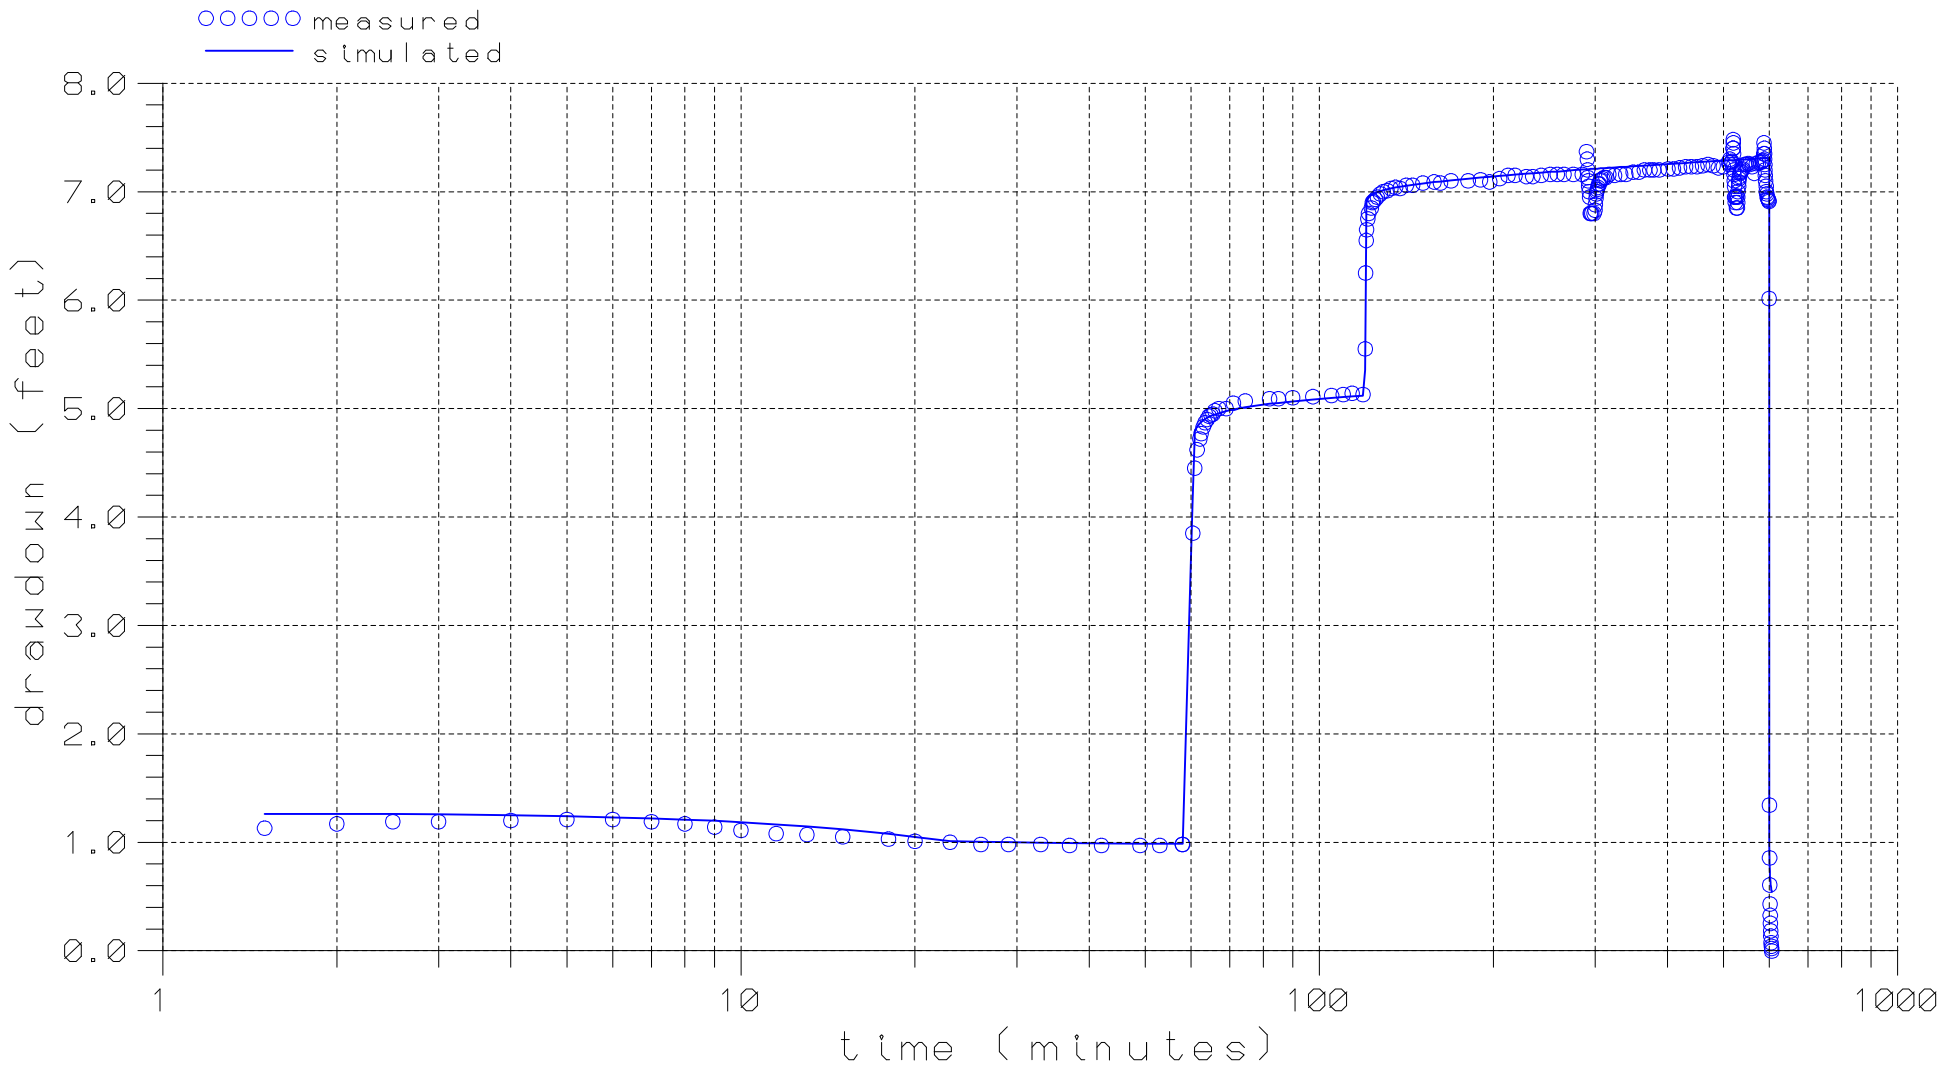
RESULTS

Transmissivity = 60 ft2/day
Storage coefficient = 1.0e-5
Vertical Hydraulic Conductivity = NA
well loss constant = 0.5
well loss exponent = 1.92
assumed aquifer thickness = 180 ft
effective well radius/casing radius = 0.208 / 0.208 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-11GL DURING PUMPING AT APPROXIMATELY 1.0, 1.7, AND 4.6 GPM
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-11G/whip/bmo11gfp.srf	**N.50**



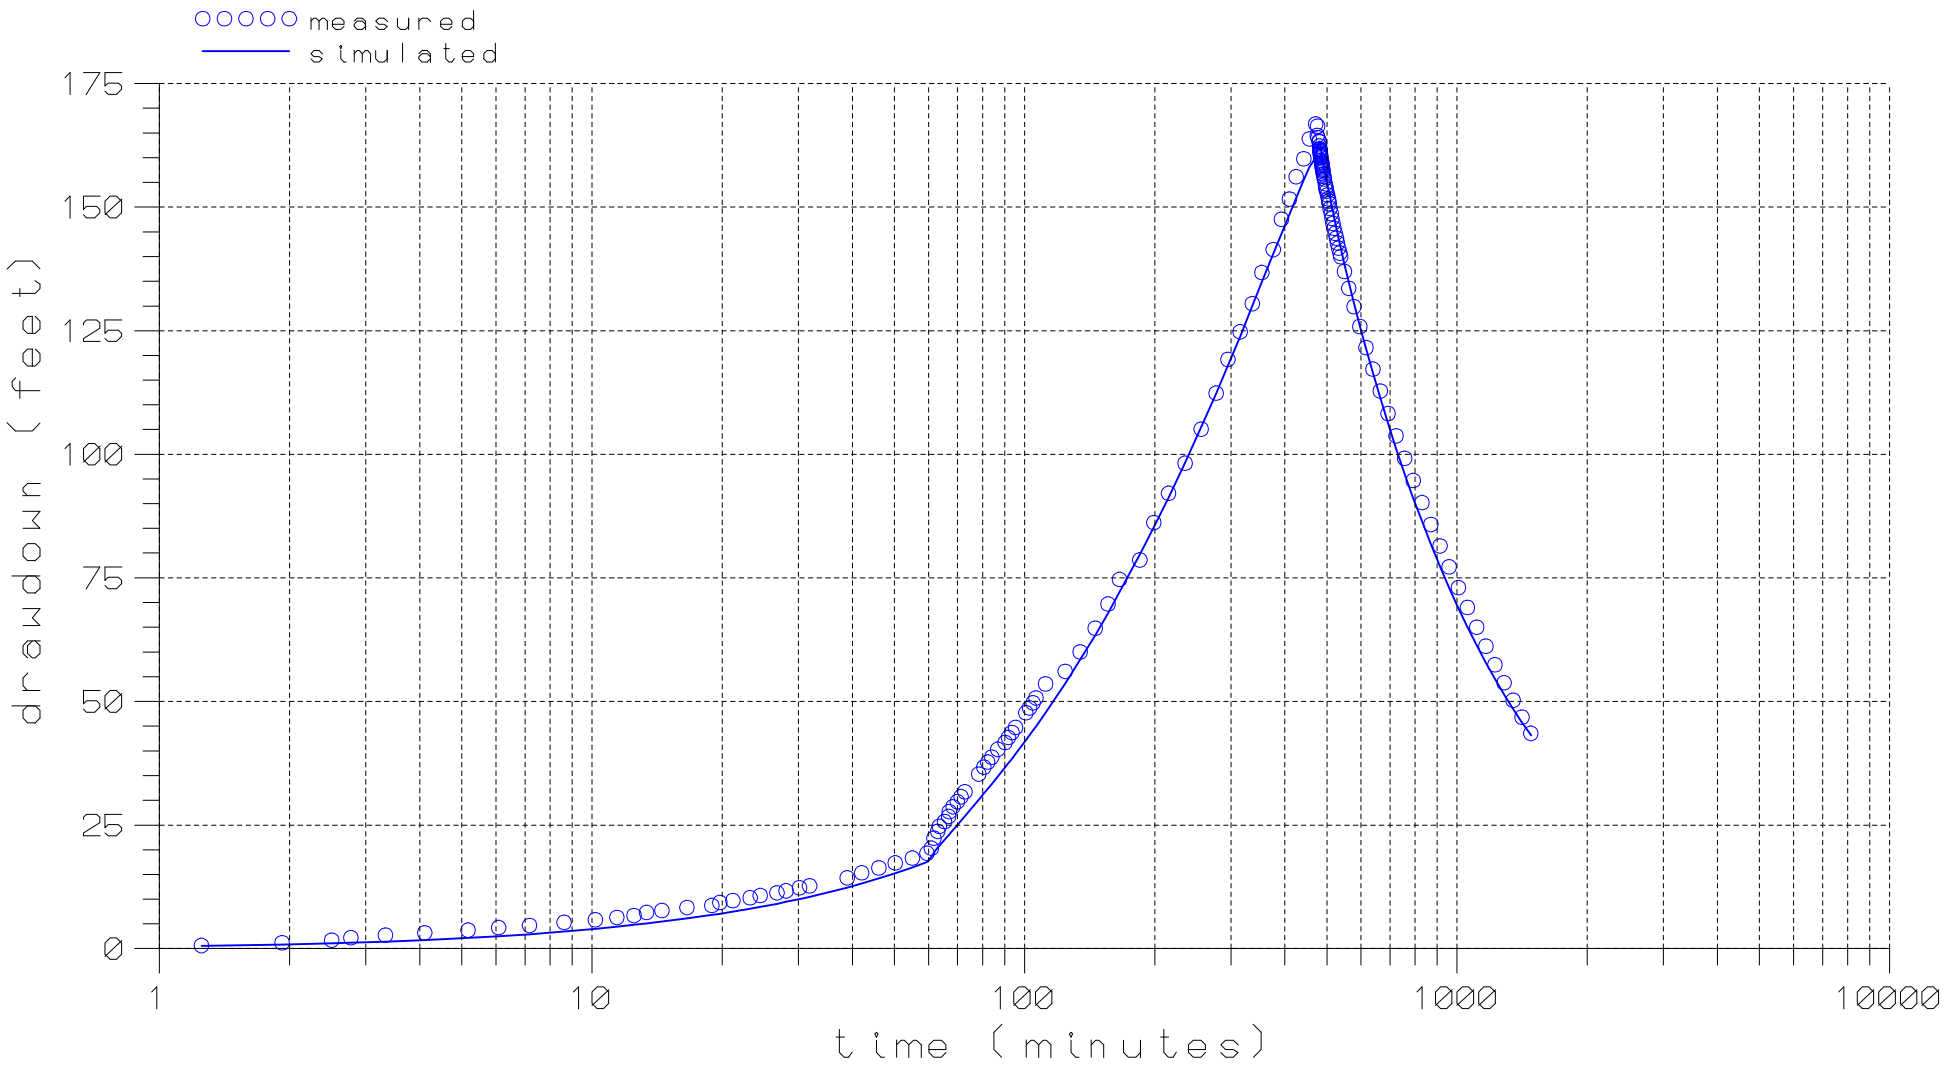
RESULTS

Transmissivity = 7500 ft2/day
Storage coefficient = 0.01
Vertical Hydraulic Conductivity = 1.0 ft/day
well loss constant = 0.074
well loss exponent = 1.05
assumed aquifer thickness = 313 ft
effective well radius/casing radius = 0.208 / 0.208 ft

HYDRO GEO CHEM, INC.

MEASURED (HAND COLLECTED) AND SIMULATED DRAWDOWNS AT BMO-13B DURING PUMPING AT APPROXIMATELY 12 - 8.8, 42.5, AND 58 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-13B/whip/bmo13bh.srf	**N.51**



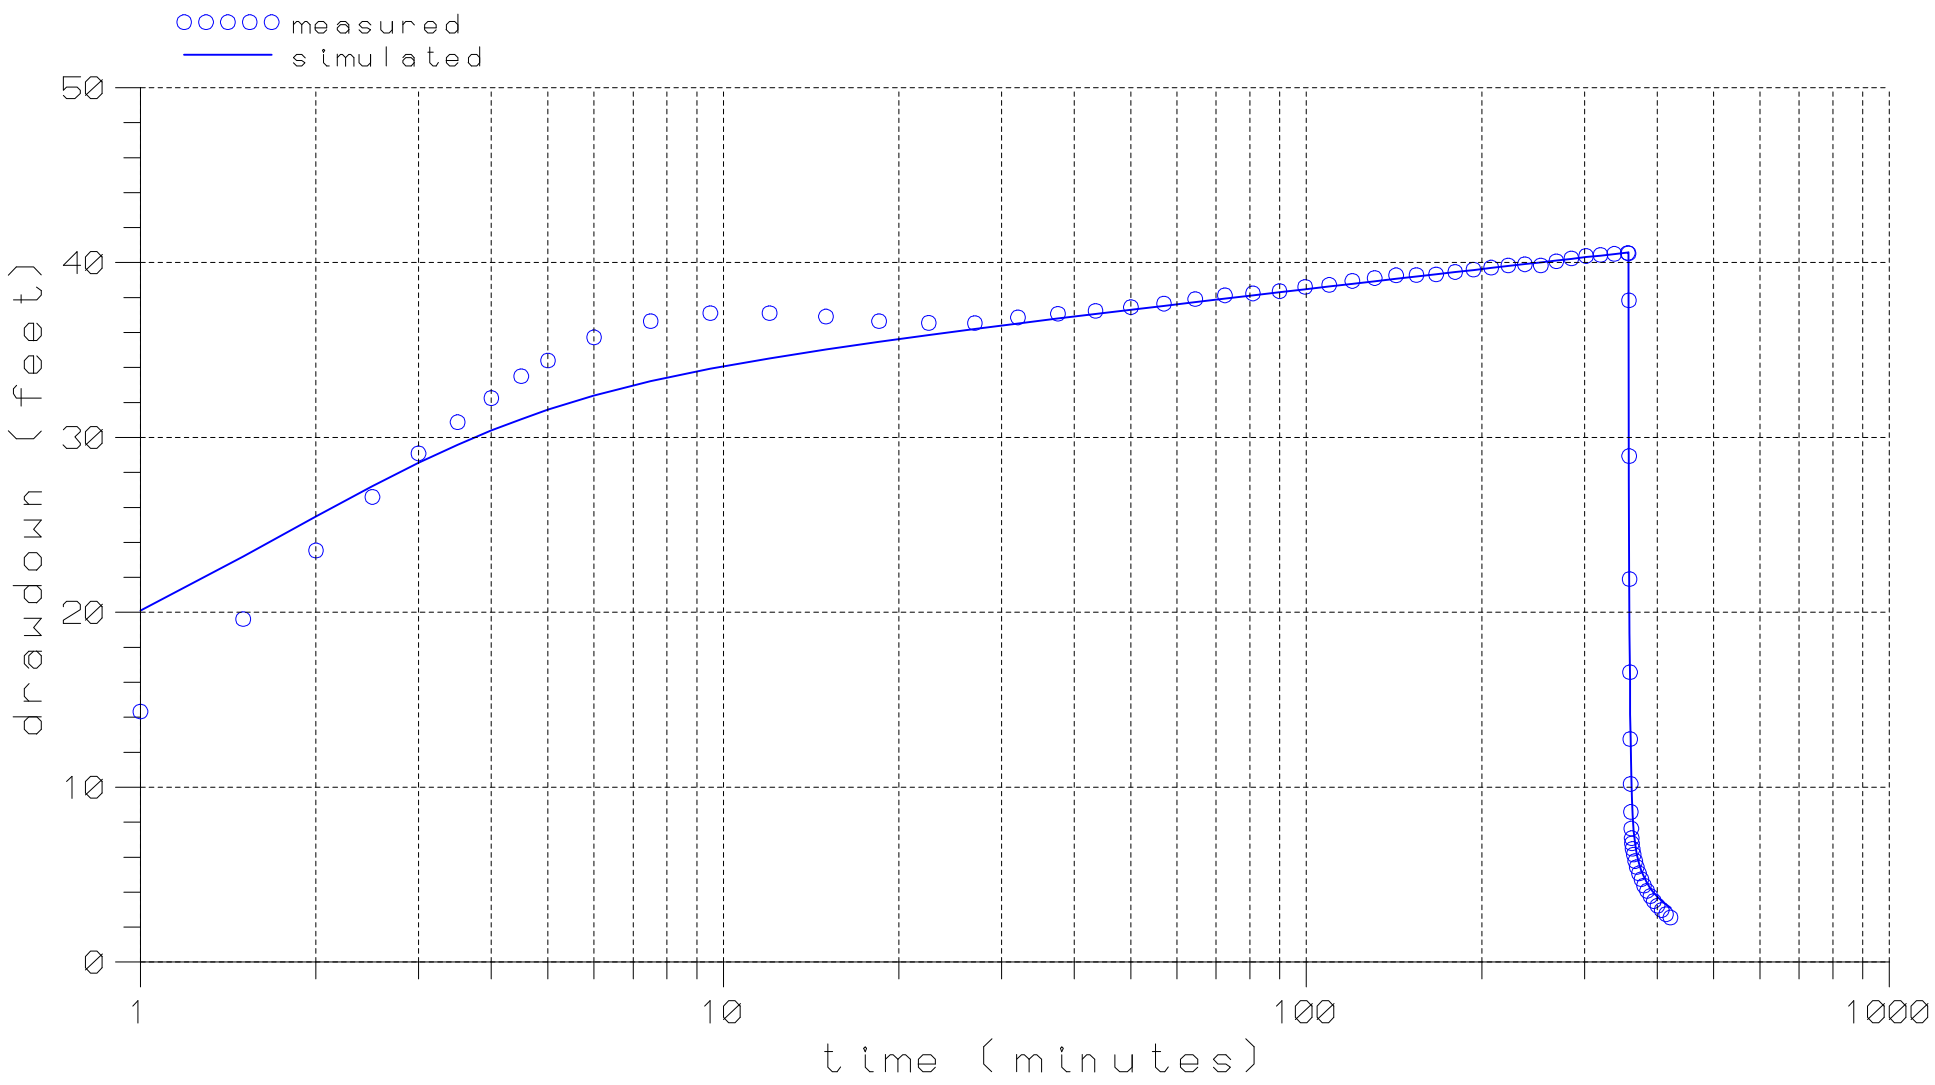
RESULTS

Transmissivity = 0.661 ft2/day
Storage coefficient = 1.94e-2
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 130 ft
effective well radius/casing radius = 1.13 / 0.455 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-13M DURING PUMPING AT APPROXIMATELY 1.75 AND 3.75 GPM
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ BMO-13M/whip/bmo13mf.srf	**N.52**



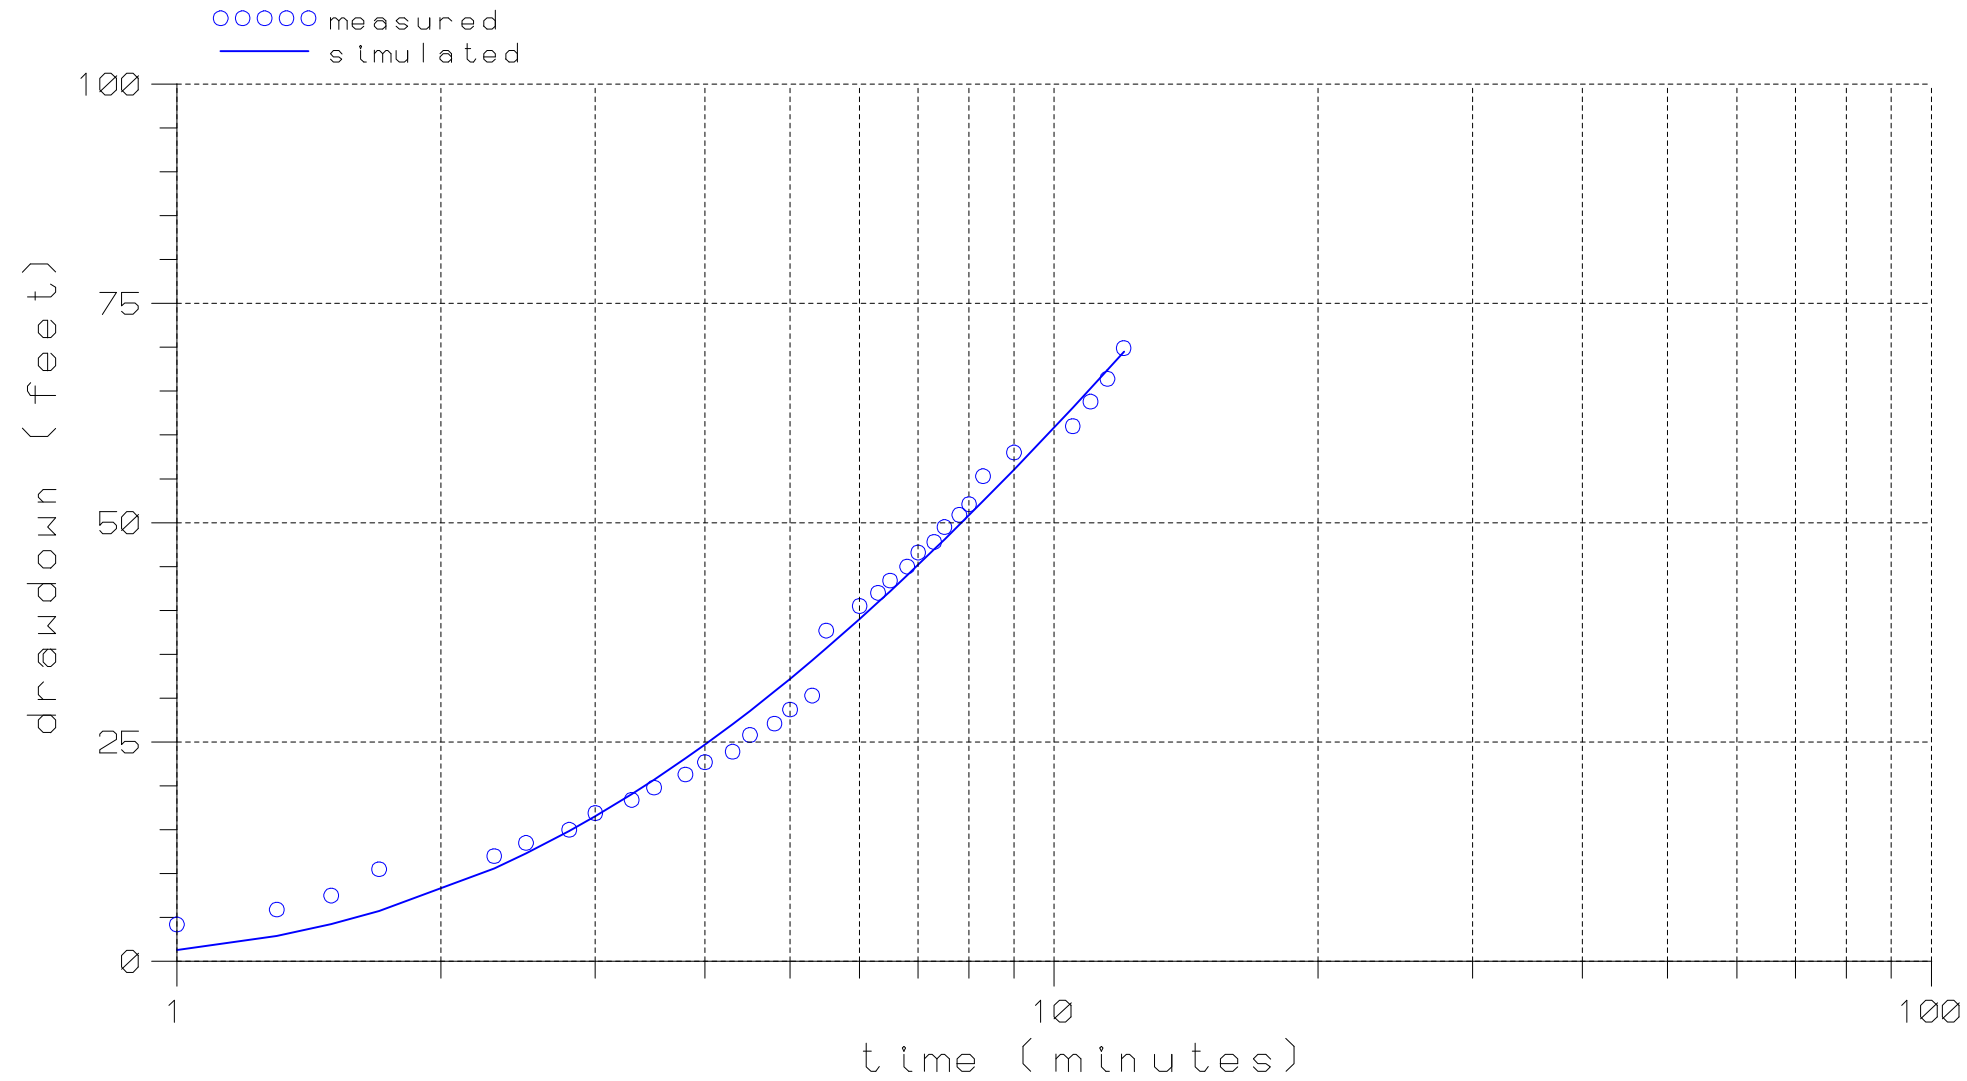
RESULTS

Transmissivity = 142 ft2/day
Storage coefficient = 1e-5
Vertical Hydraulic Conductivity = NA
well loss constant = 0.044
well loss exponent = 2
assumed aquifer thickness = 120 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT GARNER WELL DURING PUMPING AT APPROXIMATELY 15 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ GARNER/whip/garner.srf	**N.53**



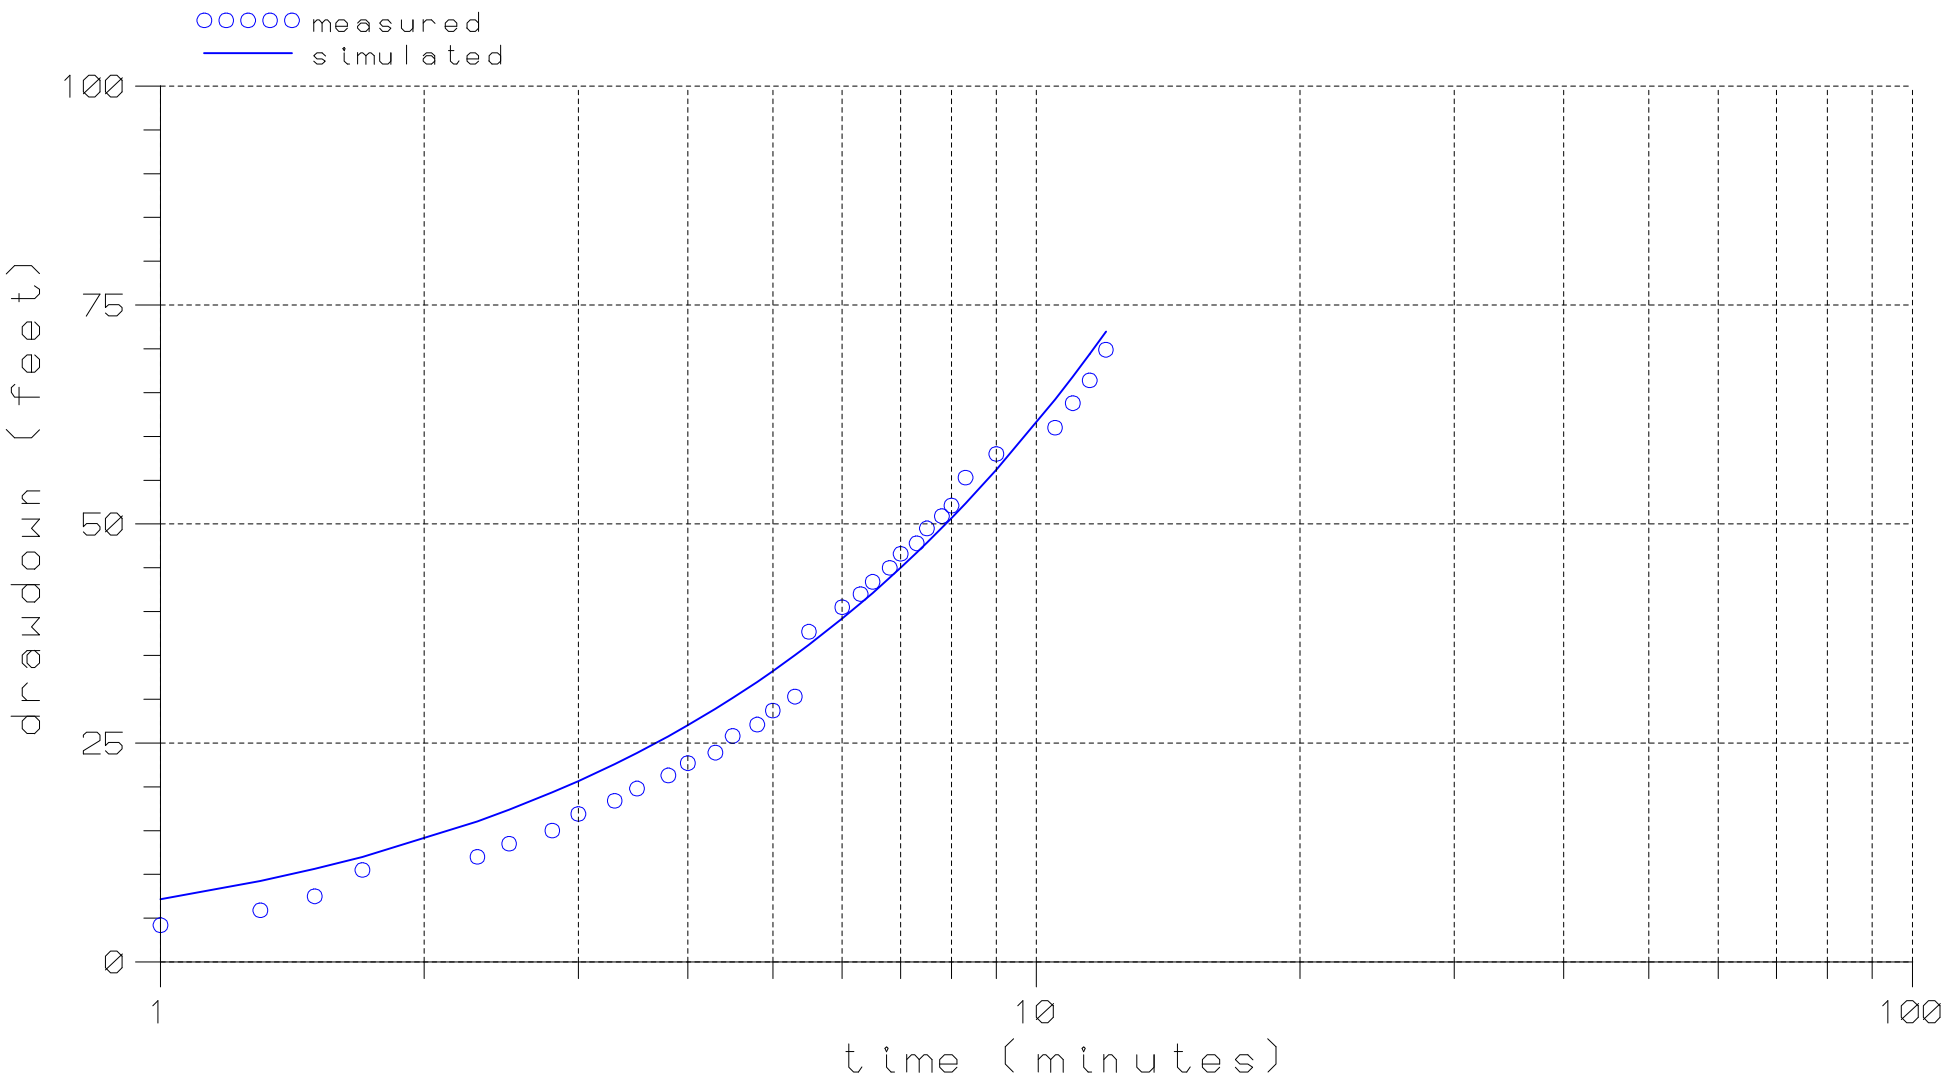
RESULTS

Transmissivity = 15.7 ft2/day
Storage coefficient = 0.041
Vertical Hydraulic Conductivity = 0
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 346 ft
effective well radius/casing radius = 1.66 / 0.225

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT TM-02A DURING PUMPING AT APPROXIMATELY 9 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ TM-02A/whip/tm02a.srf	**N.54**



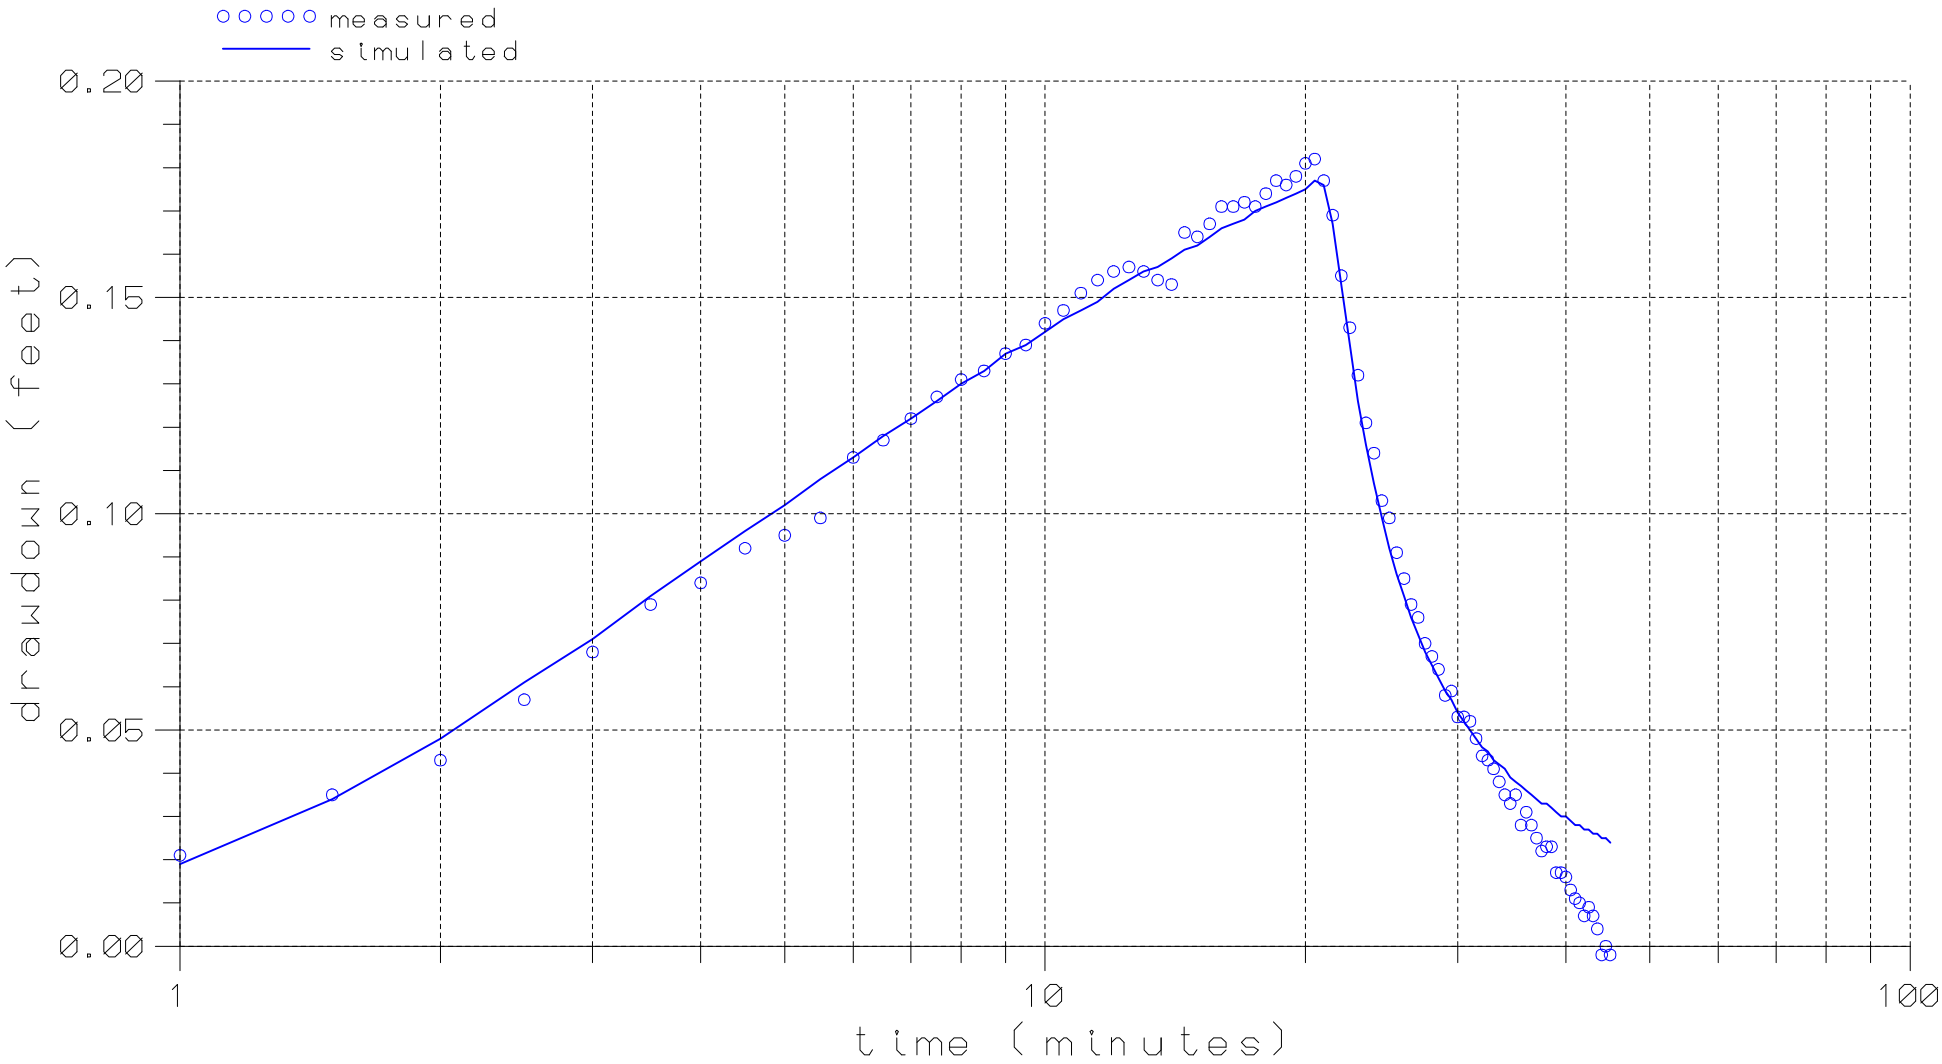
RESULTS

Transmissivity = 2.0 ft2/day
Storage coefficient = 2e-4
Vertical Hydraulic Conductivity = NA
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 100 ft
effective well radius/casing radius = 2.36 / 0.259

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT TM-02A DURING PUMPING AT APPROXIMATELY 9 GPM
(homogeneous aquifer solution)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ TM-02A/whip/tm02afp.srf	**N.55**



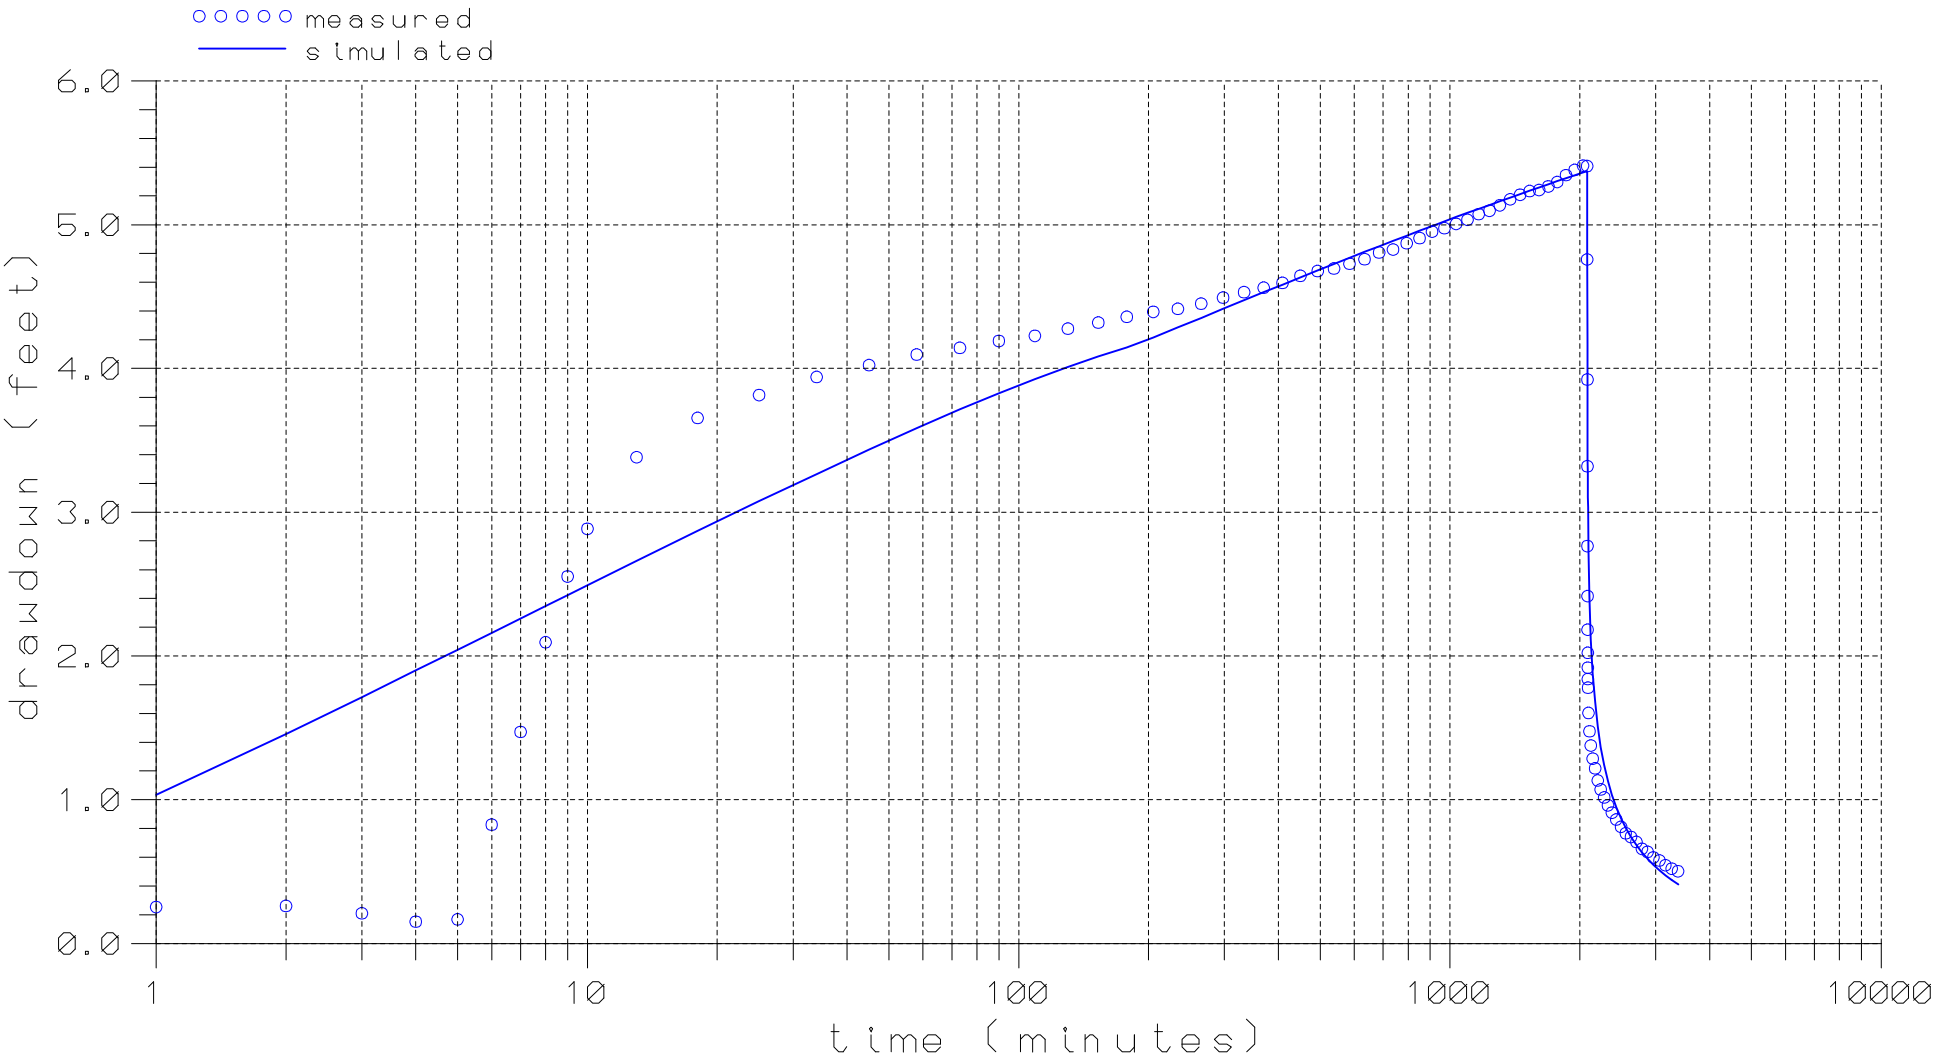
RESULTS
(linear trend removed)

Transmissivity = 21,000 ft2/day
Storage coefficient = 4.53e-4
Vertical Hydraulic Conductivity = 3.45 ft/day
well loss constant = NA
well loss exponent = NA
ssumed aquifer thickness = 505 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT NWC-3 CAP DURING PUMPING OF NWC-3 AT APPROXIMATELY 52 GPM (DATA CORRECTED FOR ATMOSPHERIC PRESSURE CHANGE AND A LINEAR TREND)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/29/09	H:/872000/Task 2.4/ NWC-3/2008test/whip/nwc3ob.srf	**N.56**



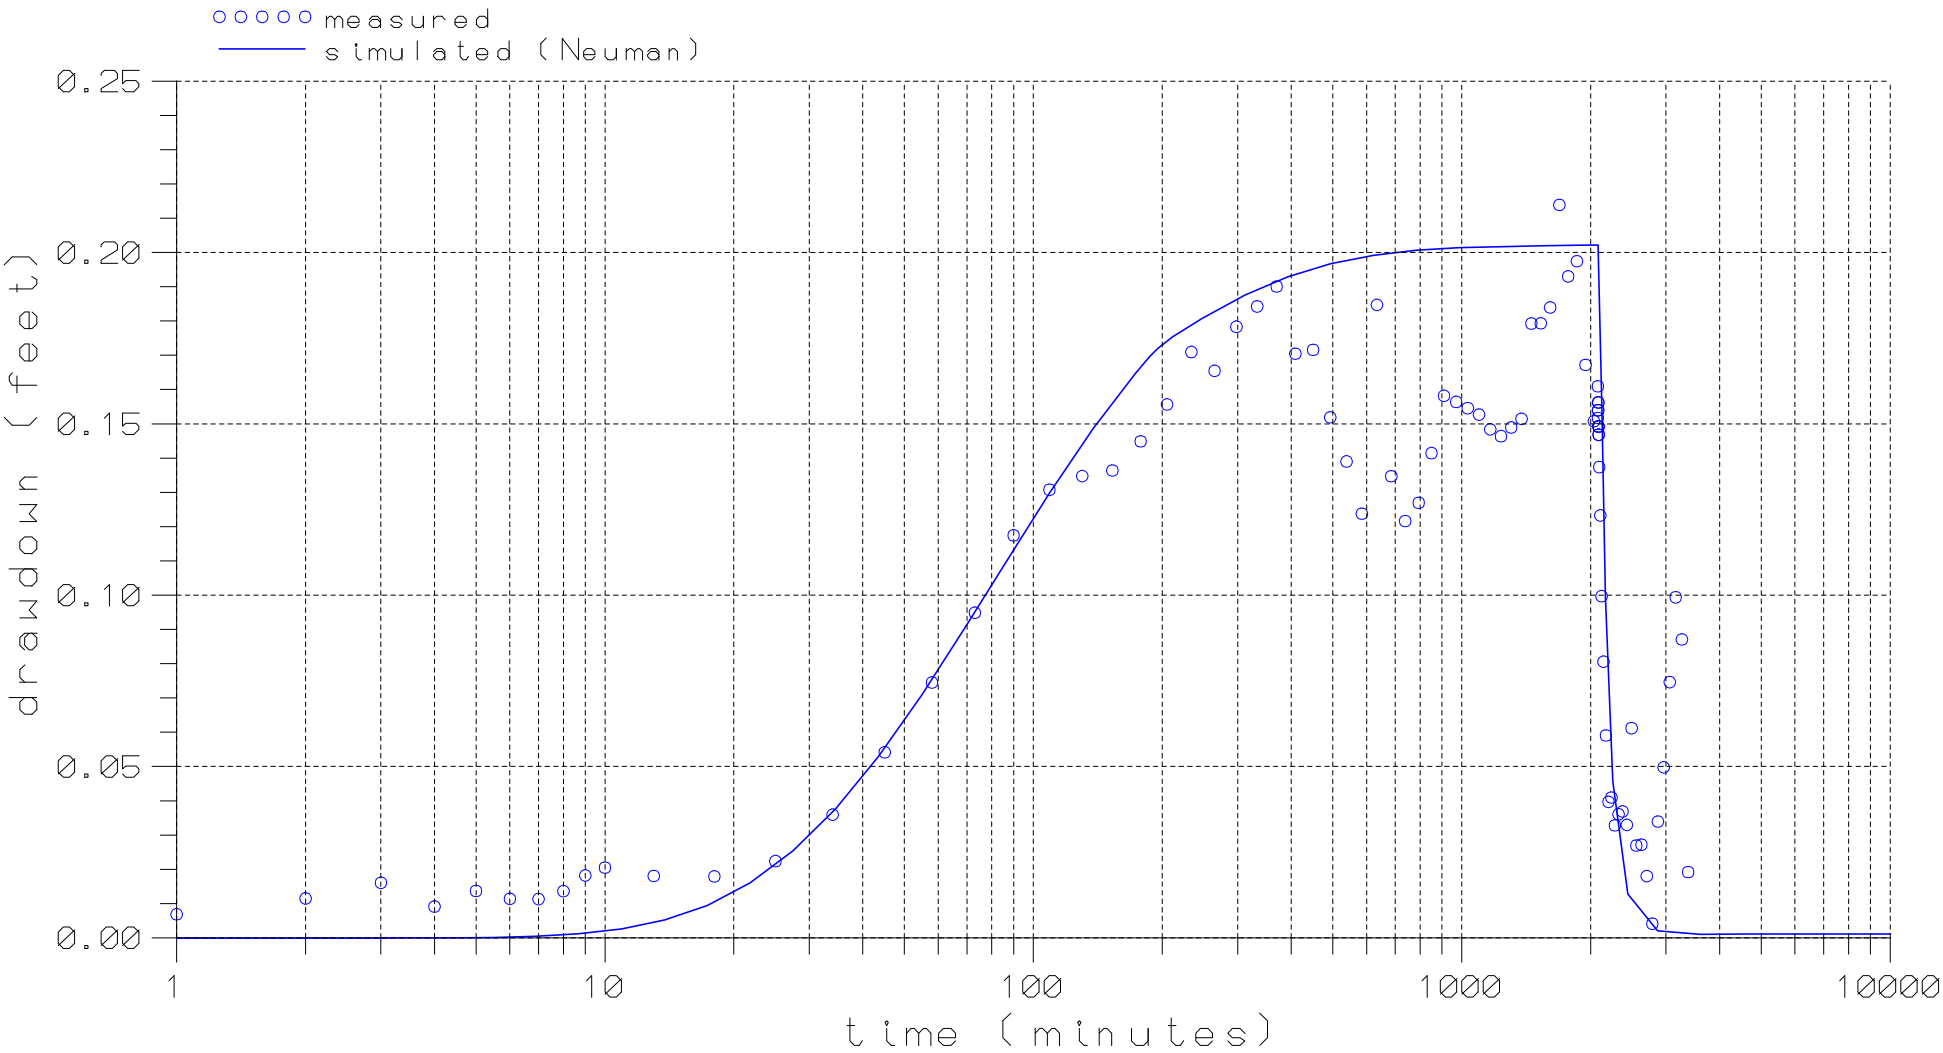
RESULTS
(linear trend removed)

Transmissivity = 24,000 ft2/day
Storage coefficient = 0.0694
Vertical Hydraulic Conductivity = 1 ft/day
well loss constant = NA
well loss exponent = NA
assumed aquifer thickness = 505 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT TVI-713 DURING PUMPING OF TVI-875 AT APPROXIMATELY 380 GPM

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ TVI875/whip/TVI713.srf	**N.57**



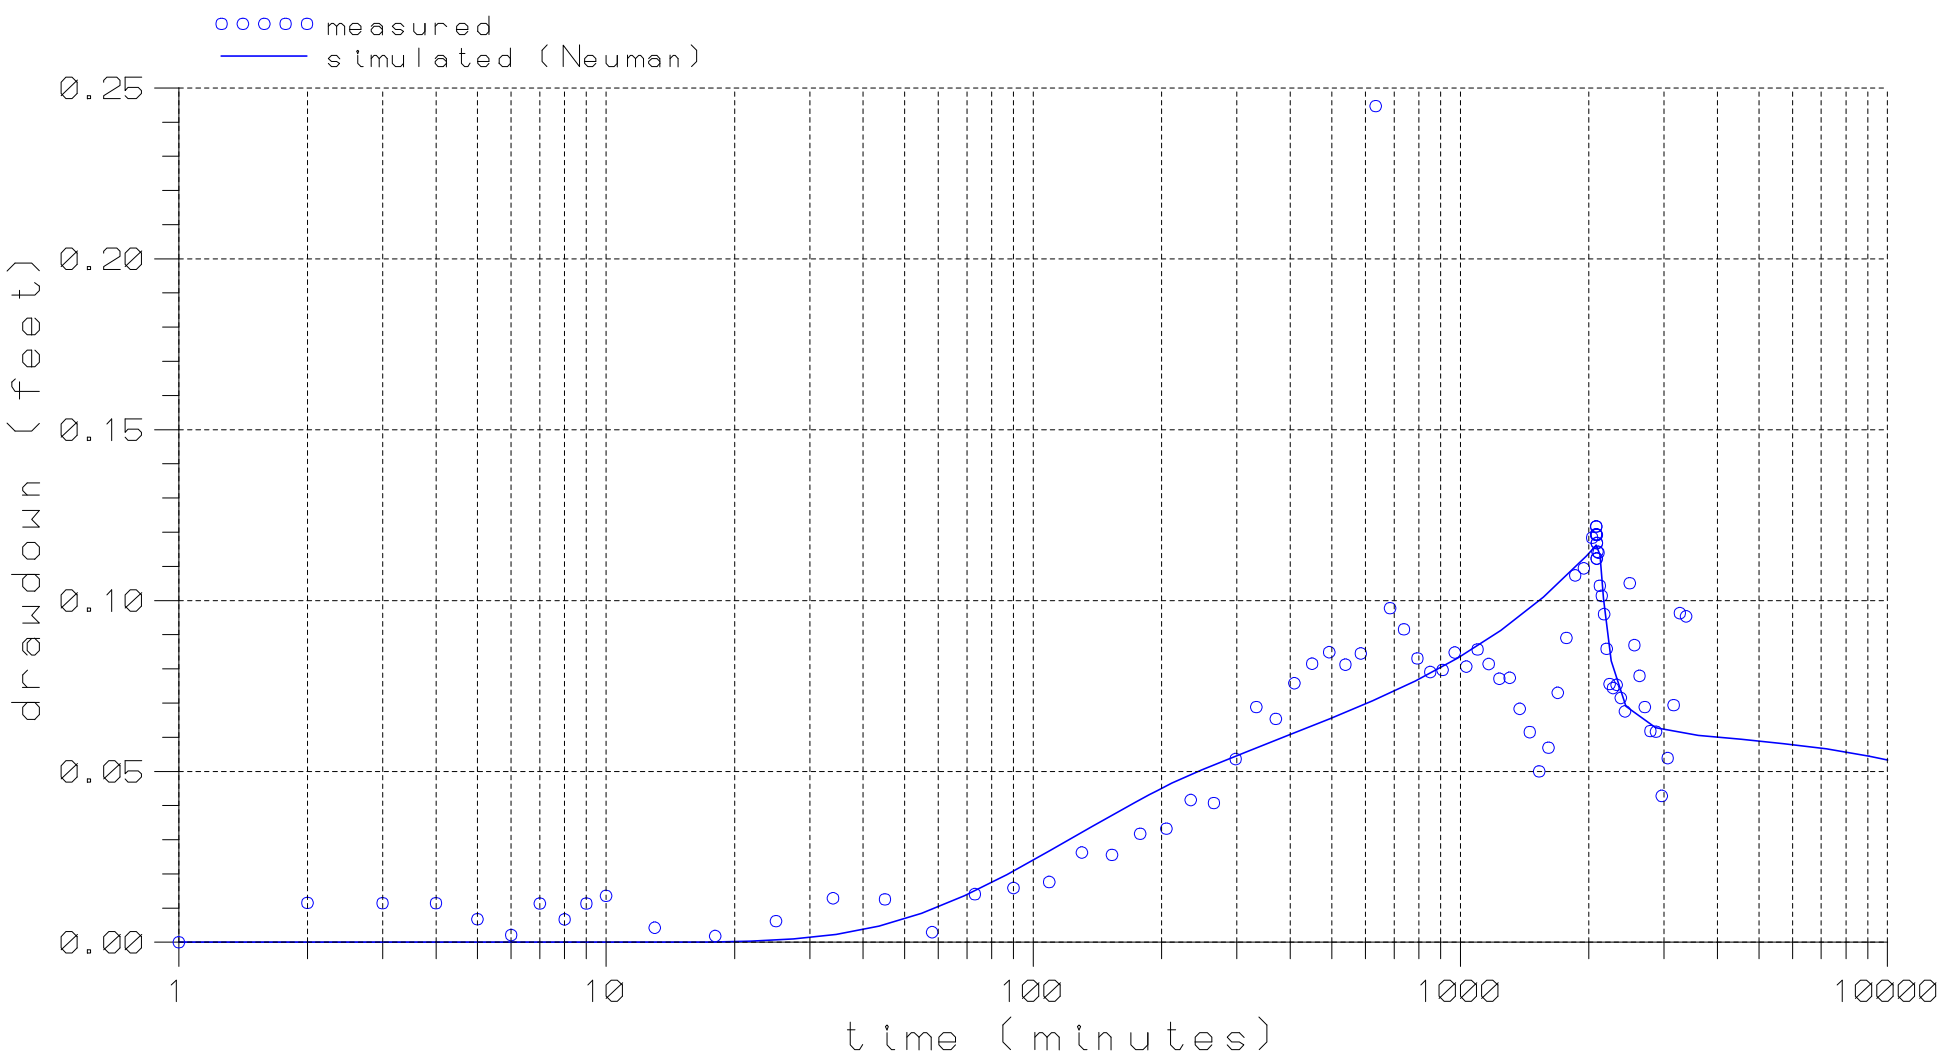
RESULTS
(linear trend removed)

Transmissivity = 28,850 ft2/day
Storage coefficient = 6.85e-6
Specific Yield = 0.012
Beta = 0.0008952 (implies Kz/Kh of 1.5e-4)
assumed aquifer thickness = 505 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT BMO-4B DURING PUMPING OF TVI-875 AT APPROXIMATELY 380 GPM (USING NEUMAN SOLUTION IN AQTESOLVE)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ TVI875/aqtesolv/bmo4baqt.srf	**N.58**



RESULTS
(linear trend removed)

Transmissivity = 21,860 ft2/day
Storage coefficient = 3.15e-3
Specific Yield = 0.0494
Beta = 0.0826 (implies Kz/Kh of 0.0107)
assumed aquifer thickness = 505 ft

HYDRO GEO CHEM, INC.

MEASURED AND SIMULATED DRAWDOWNS AT NWC-3 DURING PUMPING OF TVI-875 AT APPROXIMATELY 380 GPM (USING NEUMAN SOLUTION IN AQTESOLVE)

APPROVED	DATE	REFERENCE	FIGURE
SJS	4/25/09	H:/872000/Task 2.4/ TVI875/aqtesolv/nwc3aqt.srf	N.59
