Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	LCSWD	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	LFB	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	LFM	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	LFMD	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	LRB	Laboratory Reagent Blank
ICB	Initial Calibration Blank	MS	Matrix Spike
ICV	Initial Calibration Verification standard	MSD	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	PBS	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	PBW	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	PQV	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	SDL	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value.
	The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Date Received: 10/10/2008
Received By:
Date Printed: 10/10/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?		X	
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Sample #9 was received broken, was saved in a plastic bag per pm.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Project ID: OJ07R9
ACZ Project ID: L72452

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on October 14, 2008. This project has been assigned to ACZ's project number, L72452. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72452. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after November 30, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	LCSWD	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	LFB	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	LFM	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	LFMD	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	LRB	Laboratory Reagent Blank
ICB	Initial Calibration Blank	MS	Matrix Spike
ICV	Initial Calibration Verification standard	MSD	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	PBS	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	PBW	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	PQV	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	SDL	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on November 05, 2008. This project has been assigned to ACZ's project number, L72871. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72871. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after December 25, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

November 25, 2008

Project ID: OJ07R9
ACZ Project ID: L72871

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 18 soil samples from FMI Gold & Copper - Sierrita on November 5, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L72871. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Some of the Lead results have been qualified with the N1 flag on the extended qual report. The chemist noted that the associated interferent check sample failed biased high. The level in the samples was greater than 10x the level in the isca. No significant impact would be expected.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	LCSWD	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	LFB	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	LFM	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	LFMD	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	LRB	Laboratory Reagent Blank
ICB	Initial Calibration Blank	MS	Matrix Spike
ICV	Initial Calibration Verification standard	MSD	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	PBS	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	PBW	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	PQV	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	SDL	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L72871-11	WG255513	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255523	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255513	Lead, total (3050)	M6020 ICP-MS	N1	See Case Narrative.
	WG255523	Molybdenum, total (3050)	M6010B ICP	MC	Recovery for matrix spike and matrix spike duplicate are outside of acceptance limits; recovery for the method control sample was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG255513	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG255523	Zinc, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
L72871-12	WG255513	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255523	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255513	Lead, total (3050)	M6020 ICP-MS	N1	See Case Narrative.
	WG255523	Molybdenum, total (3050)	M6010B ICP	MC	Recovery for matrix spike and matrix spike duplicate are outside of acceptance limits; recovery for the method control sample was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG255513	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG255523	Zinc, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ACZ Project ID: L72871
Date Received: 11/5/2008
Received By:
Date Printed: 11/5/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Sample Container Preservation Legend

Abbreviation	Description	Container Type	Preservative/Limits
R	Raw/Nitric	RED	pH must be < 2
B	Filtered/Sulfuric	BLUE	pH must be < 2
BK	Filtered/Nitric	BLACK	pH must be < 2
G	Filtered/Nitric	GREEN	pH must be < 2
O	Raw/Sulfuric	ORANGE	pH must be < 2
P	Raw/NaOH	PURPLE	pH must be > 12 *
T	Raw/NaOH Zinc Acetate	TAN	pH must be > 12
Y	Raw/Sulfuric	YELLOW	pH must be < 2
YG	Raw/Sulfuric	YELLOW GLASS	pH must be < 2
N/A	No preservative needed	Not applicable	
RAD	Gamma/Beta dose rate	Not applicable	must be < 250 µR/hr

* pH check performed by analyst prior to sample preparation

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Phoenix, AZ 85002-2671

cc: Rick Smith, Steve Vaughn

Project ID: OJ07R9
ACZ Project ID: L73011

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on November 12, 2008. This project has been assigned to ACZ's project number, L73011. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L73011. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after January 03, 2009. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed
and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	LCSWD	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	LFB	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	LFM	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	LFMD	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	LRB	Laboratory Reagent Blank
ICB	Initial Calibration Blank	MS	Matrix Spike
ICV	Initial Calibration Verification standard	MSD	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	PBS	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	PBW	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	PQV	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	SDL	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L73011***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L73011-01	WG256342	Lead (1312)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
L73011-02	WG256043	Digestion - Alkaline	M3060A	H3	Sample was received and analyzed past holding time.
	WG256346	Chromium, Hexavalent (3060)	M7196A	DA	Sample required dilution due to reactivity.
			M7196A	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M7196A	MD	The spike recovery (and spike duplicate RPD, if applicable) was not used for data validation because the concentration of the sample and/or the spike was less than the reporting limit.
			M7196A	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
L73011-03	WG256342	Lead (1312)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
L73011-04	WG256043	Digestion - Alkaline	M3060A	H3	Sample was received and analyzed past holding time.
	WG256346	Chromium, Hexavalent (3060)	M7196A	DA	Sample required dilution due to reactivity.
			M7196A	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M7196A	MD	The spike recovery (and spike duplicate RPD, if applicable) was not used for data validation because the concentration of the sample and/or the spike was less than the reporting limit.
			M7196A	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).

Company: FMI - Sierrita	PO Box 527 Green Valley, AZ
E-mail: Ned_Hall@FMI.com	Telephone: 520-648-8857

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

PROJECT INFORMATION

Quote #: OJ07R9

Project/PO #:

Reporting state for compliance testing:

Sampler's Name: Kevin Walsh

Are any samples NRC licensable material?

Project ID: OJ07R9
ACZ Project ID: L73087

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on November 17, 2008. This project has been assigned to ACZ's project number, L73087. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L73087. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after January 03, 2009. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	LCSWD	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	LFB	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	LFM	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	LFMD	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	LRB	Laboratory Reagent Blank
ICB	Initial Calibration Blank	MS	Matrix Spike
ICV	Initial Calibration Verification standard	MSD	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	PBS	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	PBW	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	PQV	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	SDL	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L73087***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L73087-01	WG256435	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG256433	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG256435	Lead, total (3050)	M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG256433	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG256058	Mercury, total	M7471A CVAA	H3	Sample was received and analyzed past holding time.
	WG256433	Molybdenum, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG256435	Thallium, total (3050)	M6020 ICP-MS	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Uranium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG256433	Zinc, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L73087***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L73087-02	WG256435	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG256433	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG256435	Lead, total (3050)	M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG256433	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG256058	Mercury, total	M7471A CVAA	H3	Sample was received and analyzed past holding time.
	WG256433	Molybdenum, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

Received By:
Date Printed: 11/19/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?		X	
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Some parameters were received past hold time.

Contact (For any discrepancies, the client must be contacted)

The client was not contacted.

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/hr)
NA7366	2.5	15

Client must contact ACZ Project Manager if analysis should not proceed for samples received outside of thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Project ID: OJ07R9
ACZ Project ID: L70791

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 29, 2008. This project has been assigned to ACZ's project number, L70791. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70791. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 29, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L70791***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L70791-01	WG250091	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250000	Barium, total (3050)	M6010B ICP	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Chromium, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250054	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250000	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
L70791-02	WG250091	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250000	Barium, total (3050)	M6010B ICP	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Chromium, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250054	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250000	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
L70791-03	WG250091	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250000	Barium, total (3050)	M6010B ICP	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Chromium, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ICPMS DATA REVIEW CHECKLIST

AREV: MSH
Date: 8-18-08

Workgroup: WG250091
Sample Type: T3.50
Analysis Date: 8-15-08
Analyst: MSH

SREV: [illegible]
Date: 8-20-08

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)	✓		
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?	✓		
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?	✓		
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

ICPMS DATA REVIEW CHECKLIST

AREV: MH
Date: 8-21-01

SREV: [illegible]
Date: 8-21-01

Workgroup: WG25196
Sample Type: SOIL
Analysis Date: 8-20-01
Analyst: MH

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)	✓		
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?	✓		
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?	✓		
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

Sample QC Report

Data File: C:\ICPCHEM\1\DATA\wg250196.b\001SMPL.D\001SMPL.D#
Date Acquired: Aug 21 2008 08:39 am
Acq. Method: T126020D.M
Operator:
Sample Name: wash
Misc Info:
Vial Number: 1101
Current Method: C:\ICPCHEM\1\METHODS\T126020D.M
Calibration File: C:\ICPCHEM\1\CALIB\T126020D.C
Last Cal. Update: Aug 19 2008 08:34 pm
Sample Type: Sample
Dilution Factor: 1.00
Autodil Factor: Undiluted
Final Dil Factor: 1.00

Data Results:
Analytes: Pass
ISTD: Pass

ICPMS DATA REVIEW CHECKLIST

Workgroup:	WG250395
Sample Type:	3255
Analysis Date:	8.28.08
Analyst:	SR

AREV:	SP
Date:	8.29.08
SREV:	NSH
Date:	8-29-08

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?			
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.			
4) Is the linear regression >0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)	✓		
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?	✓		
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?	✓		
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action

ICPMS DATA REVIEW CHECKLIST

AREV: MSH
Date: 8-19-08

Workgroup: WG249797
Sample Type: T3 5D
Analysis Date: 8-14-08
Analyst: MSH

SREV: EC
Date: 8-20-08

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression >0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)	✓		
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?	✓		
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?	✓		
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

Continuing Calibration Blank (CCB) QC Report

Data File: C:\ICPCHEM\1\DATA\wg249797.b\044_CCB.D\044_CCB.D#
Date Acquired: Aug 14 2008 11:05 pm
Operator:
Sample Name: CCB
Misc Info:
Vial Number: 1102
Current Method: C:\ICPCHEM\1\METHODS\6020ACZ1.M
Calibration File: C:\ICPCHEM\1\CALIB\6020ACZ1.C
Last Cal Update: Aug 14 2008 07:08 pm
Sample Type: CCB
Total Dil Factor: 1.00

Data Results:
Analytes: Pass
ISTD: Pass

ICP DATA REVIEW CHECKLIST

Reviewed By: AEH
Date: 8/15/08

Approved By: [signature]
Date: 8-20-08

Work Group:	WG250000
Sample Type:	3050
Analysis Date:	8/14/08
Analyst:	AEH

Instrument Checklist	Yes	No	N / A
1) Is the correct run date associated with the workgroup?	✓		
2) Are all of the QC critera listed in LIMS within specified limits? **		✓	
3) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
4) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
5) Is a current standard/reagent form attached to the workgroup?	✓		
6) Have all dilutions performed at the bench been checked off on the benchsheet?			✓
7) Has any sample on a 2x dilution been checked for proper mixing (review raw data)?			✓
8) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
9) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any item listed above that is checked "No" state the problem and corrective action / resolution in the sections below.

QC/Sample ID	Analytical Problem	Corrective action
PQV	Be = 151%	Redo associated sxs
	Mn = 139.2%	1
L70791-20 SDL	Cr = 11.5%	Z9
L70791-20 MS	Ba = 163.1% MSD: Ba = 162.2%	M1
	Cu = 855.8% Cu = 300.8%	M3
	Zn = 141.6% Zn = 147%	M3

** Na 3302 line is used for values > 500 mg/L. LIMS failure(s) of blanks and low level QC standards is due to high "noise."

ICP DATA REVIEW CHECKLIST

Reviewed By: [illegible]
Date: 8/18/08

Work Group: W6250554
Sample Type: 3050
Analysis Date: 8/16/08
Analyst: [illegible]

Approved By: [illegible]
Date: 8/19/08

Instrument Checklist	Yes	No	N / A
1) Is the correct run date associated with the workgroup?	✓		
2) Are all of the QC critera listed in LIMS within specified limits? **		✓	
3) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
4) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
5) Is a current standard/reagent form attached to the workgroup?	✓		
6) Have all dilutions performed at the bench been checked off on the benchsheet?			✓
7) Has any sample on a 2x dilution been checked for proper mixing (review raw data)?			✓
8) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
9) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any item listed above that is checked "No" state the problem and corrective action / resolution in the sections below.

QC/Sample ID	Analytical Problem	Corrective action
307991-20 MS	Mn = 201.4% MSD: Mn = 1416.6	M3

** Na 3302 line is used for values > 500 mg/L. LIMS failure(s) of blanks and low level QC standards is due to high "noise."

FIMS/FIAS DATA REVIEW CHECKLIST

Data Reviewer: PMC
Date: 8-11-08

Approved: [signature]
Date: 8-12-08

Work Group: 249682
Sample Type: Hg-T-846
Analysis Date: 8-11-08
Analyst: PMC

	Yes	No	N/A
1.) Does the instrument calibration meet the specified method criteria? (r ≥ 0.995)	✓		
2.) Was the low calibration standard dropped? If Yes, notify PM of change to PQL.		✓	
3.) Are all of the QC critera listed in LIMS within the acceptance limits?	✓		
4.) Are "H" flags for missed hold time appropriate?			✓
5.) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
6.) Are all dilution factors correctly calculated and uploaded? (Soil, Sludge, Water)	✓		
7.) Is any sample prepped / analyzed on dilution appropriately "D" qualified (except o-cal)?			✓
8.) Are dilutions for o-cals in the appropriate range? (explain if "B" or "U" is reported)			✓
9.) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10.) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
11.) Is a current standard/reagent sheet attached to the workgroup?	✓		
12.) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?		✓	

Continuing Calibration? NO Cal WG# : NONE Digest Time In: 7:34 / 8:35

Digest Date: 8-8-08 Digest Temp: 92°C Digest Time Out: 7:36 / 9:05

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
	All Passing

ACZ Laboratories, Inc.
Standards/Reagents Information
Mercury (solids) by CVAA

Reagents:		Expiration
HNO3	PCN:30276	7/16/2009
HCl	PCN: 30084	6/20/2009
KMnO4	PCN: 28817	11/30/2012
SnCl2	PCN: 29591	4/17/2013
Hydrox	PCN: 29748	5/8/2013
NaCl	PCN: 27957	8/16/2012
PBS (sand)	PCN26555	2/16/2012

Standards:

Cal/Spike Stock intermediate (10 mg/L);	Traceable through spike SCN on benchsheet. (same 10mg/L intermediate used for spikes and cal. standards).

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Data Review and Reagents

Data Reviewer: LWT
Date: 8-8-08

Approved: BJR
Date: 8/9/08

Analyst: MJC/LWT

Workgroup: 249661

Analysis Date: 8-8-08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?	X		
3. Were proper volumes of reagents used per final volume?	X		
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?	X		
6. Did the RPD pass?			X
7. Does all the spike information correlate with each other?	X		
8. Is the appropriate spike in the computer-designated line?	X		
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?	X		
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

Standard/Reagent	PCN/SCN	Expiration Date

Data Review and Reagents

Data Reviewer: BZ
Date: 7/31/08

Approved: LWT
Date: 7-31-08

Analyst: BZ

Workgroup: WG249031

Analysis Date: 7/30/08 - 7/31/08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?	X		
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

Standard/Reagent	PCN/SCN	Expiration Date

Data Review and Reagents

Data Reviewer: BJZ
Date: 7/30/08

Analyst: BJZ

Approved: CWT
Date: 7-30-08

Workgroup: WG249020

Analysis Date: 7/29/08 - 7/30/08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	✓		
2. Is the %solid or TS attached for dilution factors?			✓
3. Were proper volumes of reagents used per final volume?			✓
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	✓		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			✓
6. Did the RPD pass?			✓
7. Does all the spike information correlate with each other?			✓
8. Is the appropriate spike in the computer-designated line?			✓
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	✓		
10. Is the standard/reagent information complete and current?			✓
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?		✓	

Standard/Reagent	PCN/SCN	Expiration Date

Data Reviewer: BRD
Date: 8-5-08

Approved: LWT
Date: 8-5-08

Analyst: LWT / BRD
Workgroup: 249412
Analysis Date: 8-5-08
Sample type used: Soil
Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?			X
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓

ACZ Project ID: L70791
Date Received: 7/29/2008
Received By:
Date Printed: 7/29/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES [ ] NO [ ]
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Project ID:
ACZ Project ID: L71134

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 13, 2008. This project has been assigned to ACZ's project number, L71134. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71134. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 04, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71134***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71134-01	WG250829	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250782	Chromium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250829	Lead, total (3050)	M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250782	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250829	Uranium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250782	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71134***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71134-14	WG250829	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250782	Chromium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250829	Lead, total (3050)	M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250782	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250829	Uranium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250782	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

ICPMS DATA REVIEW CHECKLIST

AREV:	RAC
Date:	8/29/08
SREV:	
Date:	8-29-08

Workgroup:	250829
Sample Type:	3050
Analysis Date:	8/29/08
Analyst:	RAC

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)			✓
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?	✓		
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
134-16	Pb, Sb OCAL	REDO @ 20x
-17	Pb OCAL	REDO @ 10x
513 LCSS	As↑ = 221.1 ppm	RL
134-01 SDL	Ni, sx < 100x MDL	ZB
134-17MS/D	Pb↑ sx @CAL	M3
	Sb↓	M2

ICPMS DATA REVIEW CHECKLIST

AREV: EEF/MSH
Date: 9/3/08

SREV: [signature]
Date: 9-3-08

Workgroup:	2509918
Sample Type:	3050
Analysis Date:	9/2/08
Analyst:	EEF/MSH

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)			✓
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	/		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

ICPMS DATA REVIEW CHECKLIST

AREV: RAC
Date: 8/29/08

SREV:
Date:

Workgroup:	250829
Sample Type:	3050
Analysis Date:	8/29/08
Analyst:	RAC

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)			✓
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?	✓		
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
134-16	Pb, Sb OCAL	REDO @ 20x
-17	Pb OCAL	REDO @ 10x
513 LCSS	As↑ = 271.1 ppm	RL
134-01 SDL	Ni, 5x < 100x MDL	2B
134-17MS/D	Pb↑ 5x OCAL	M3
	Sb↓	M2

ICP DATA REVIEW CHECKLIST

Reviewed By: AEH
Date: 8/28/08

Work Group: WG250782
Sample Type: 3050
Analysis Date: 8/28/08
Analyst: AEH

Approved By:
Date: 8-29-08

Instrument Checklist	Yes	No	N / A
1) Is the correct run date associated with the workgroup?	✓		
2) Are all of the QC critera listed in LIMS within specified limits? **		✓	
3) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
4) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
5) Is a current standard/reagent form attached to the workgroup?	✓		
6) Have all dilutions performed at the bench been checked off on the benchsheet?			✓
7) Has any sample on a 2x dilution been checked for proper mixing (review raw data)?			✓
8) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
9) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	/		

For any item listed above that is checked "No" state the problem and corrective action / resolution in the sections below.

QC/Sample ID	Analytical Problem		Corrective action
L71133-01	Fe - OCAL		Redo → 5x @ bench
	Ni - LOW		Redo → ⊥
L71134-16	Cu - OCAL		Redo → 5x @ bench
	Fe - OCAL		~~Redo~~ → AEH 8/28/08
L71134-16 SDL	Ag - 94.4%		ZG
	Co - 10.7%		ZG
	Cu - 146.4%		ZG
	Fe - 254.6%		@ Redo
	Na - 17.2%		ZG
L71134-16 MS	Al - 1811.4%	MSD: Al - 2079.2%	M3
	Mn - 13.9%	Mn - 87.2%	M3
	Mo - 4246%	Mo - 1002%	M3
	Pb - 175%	Pb - 223.8% RPD - 24.7%	M3, RD
	Zn - 202.4%	Zn - 315.6%	M3
		Cr - 126.5%	MA
	Cu - 443.4%	Cu - 5249.7%	M3
	Fe - 541.5%	Fe - 916.3%	@ Redo

** Na 3302 line is used for values > 500 mg/L. LIMS failure(s) of blanks and low level QC standards is due to high "noise."
