ICP DATA REVIEW CHECKLIST

Reviewed By: [illegible]
Date: 9/2/08

Work Group: WG 250834
Sample Type: SOIL
Analysis Date: 8/29/08
Analyst: [illegible]

Approved By: [signature]
Date: 9.2.08

Instrument Checklist	Yes	No	N / A
1) Is the correct run date associated with the workgroup?	✓		
2) Are all of the QC critera listed in LIMS within specified limits? **		✓	
3) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
4) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
5) Is a current standard/reagent form attached to the workgroup?	✓		
6) Have all dilutions performed at the bench been checked off on the benchsheet?	✓		
7) Has any sample on a 2x dilution been checked for proper mixing (review raw data)?	✓		
8) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
9) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

For any item listed above that is checked "No" state the problem and corrective action / resolution in the sections below.

QC/Sample ID	Analytical Problem	Corrective action
71083-1 MS	Cu: 2013.5 MSD: Cu: 2028 RPD: 23.13	M3 RD
	Fe: 105.4 Fe: -2051.5	no errors - JH
71084-5	Cu ocal	redo on 5x dilution
71134-16 SDL	N: 14	2G
71134-16 MS	Cu: -5581.4 MSD: Cu: -7867.5	M3
	Fe: -9254.5 Fe: 17697	M3

** Na 3302 line is used for values > 500 mg/L. LIMS failure(s) of blanks and low level QC standards is due to high "noise."

FIMS/FIAS DATA REVIEW CHECKLIST

Data Reviewer: PMC
Date: 8.23.08

Approved: [signature]
Date: 8.27.08

Work Group:	250486
Sample Type:	Hg-T-846
Analysis Date:	8.23.08
Analyst:	PMC

	Yes	No	N/A
1.) Does the instrument calibration meet the specified method criteria? (r ≥ 0.995)	✓		
2.) Was the low calibration standard dropped? If Yes, notify PM of change to PQL.		✓	
3.) Are all of the QC critera listed in LIMS within the acceptance limits?	✓		
4.) Are "H" flags for missed hold time appropriate?			✓
5.) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
6.) Are all dilution factors correctly calculated and uploaded? (Soil, Sludge, Water)	✓		
7.) Is any sample prepped / analyzed on dilution appropriately "D" qualified (except o-cal)?			✓
8.) Are dilutions for o-cals in the appropriate range? (explain if "B" or "U" is reported)			✓
9.) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10.) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
11.) Is a current standard/reagent sheet attached to the workgroup?	✓		
12.) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

Continuing Calibration? NO Cal WG# : NONE Digest Time In: 9:45 / 10:20

Digest Date: 8.22.08 Digest Temp: 92°C Digest Time Out: 9:47 / 10:50

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
	All Passing

Data Review and Reagents

Data Reviewer: BJZ
Date: 8/29/08

Approved: LWT
Date: 8-25-08

Analyst: BJZ

Workgroup: WG250513

Analysis Date: 8/29/08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	✓		
2. Is the %solid or TS attached for dilution factors?	✓		
3. Were proper volumes of reagents used per final volume?	✓		
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	✓		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?	✓		
6. Did the RPD pass?			✓
7. Does all the spike information correlate with each other?	✓		
8. Is the appropriate spike in the computer-designated line?	✓		
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	✓		
10. Is the standard/reagent information complete and current?	✓		
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

Standard/Reagent	PCN/SCN	Expiration Date

Data Review and Reagents

Data Reviewer: BJZ
Date: 8/20/08

Approved: LWT
Date: 8-20-08

Analyst: BJZ

Workgroup: WG252193

Analysis Date: 8/18/08 - 8/20/08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5. Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?	X		
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

Standard/Reagent	PCN/SCN	Expiration Date

Data Reviewer: BJL
Date: 8/19/08

Approved:
Date: LwT 8-20-08

Analyst: BJL

Workgroup: WG250191

Analysis Date: 8/19/08

Sample type used: soil

Extraction / Digestion / Analysis (Prep) Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	✓	✓	
2. Is the %solid or TS attached for dilution factors?			✓
3. Were proper volumes of reagents used per final volume?			✓
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	✓	✓	
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			✓
6. Did the RPD pass?			✓
7. Does all the spike information correlate with each other?			✓
8. Is the appropriate spike in the computer-designated line?			✓
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	✓	✓	
10. Is the standard/reagent information complete and current?			✓
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓

Data Reviewer: BSZ
Date: 8/24/08

Approved: LWT
Date: 8-25-08

Analyst: BSZ/LWT

Workgroup: WG230191

Analysis Date: 8/22/08 - 8/24/08

Sample type used: Soil

Extraction / Digestion / Analysis / ~~Prep~~ / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?			X
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	X

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Sample Receipt

FMI Gold & Copper - Sierrita

ACZ Project ID: L71134
Date Received: 8/13/2008
Received By: lcp
Date Printed: 8/14/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

ACZ Project ID: L72871

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on November 05, 2008. This project has been assigned to ACZ's project number, L72871. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72871. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after December 25, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Case Narrative

FMI Gold Copper - Sierrita

November 25, 2008

Project ID: OJ07R9
ACZ Project ID: L72871

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 18 soil samples from FMI Gold & Copper - Sierrita on November 5, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L72871. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Some of the Lead results have been qualified with the N1 flag on the extended qual report. The chemist noted that the associated interferent check sample failed biased high. The level in the samples was greater than 10x the level in the isca. No significant impact would be expected.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL. The associated value is an estimated quantity.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L72871***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L72871-01	WG255513	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255523	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	MC	Recovery for matrix spike and matrix spike duplicate are outside of acceptance limits; recovery for the method control sample was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG255513	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG255523	Zinc, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
L72871-02	WG255513	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG255523	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	MC	Recovery for matrix spike and matrix spike duplicate are outside of acceptance limits; recovery for the method control sample was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG255513	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG255523	Zinc, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ICPMS DATA REVIEW CHECKLIST

Workgroup:	255513
Sample Type:	3050
Analysis Date:	11/11/08
Analyst:	RAC

AREV:	RAC
Date:	11/12/08
SREV:	
Date:	11.12.08

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression >0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)			✓
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?		✓	
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?	✓		
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
ICSA	Pb↑ = 0.00084	NI/REDO
871-01 SDL	Tl↑, CSXJ < 100× MDL	ZB
871-18 MS/D	As↓, CSXJ↓	M2
↓	Sb↓ ↓	M2
NI	exceeds interference ✓ limit, acts as blank on B7 Aleg ≥10× ICSA7 - 016 IP 11.12.08	
	REDO < 10× EJ	
	NI: ICSA ↑ for Pb, MS >10× conc of ICSA

ICPMS DATA REVIEW CHECKLIST

AREV:	RAC
Date:	11/20/08
SREV:	
Date:	11.20.08

Workgroup:	255994
Sample Type:	3050
Analysis Date:	11/19/08
Analyst:	RAC

	Yes	No	N/A
1) Is the instrument ID on the bench sheet correct?	✓		
2) Has a passing method tune been performed within 24 hours?	✓		
3) Was the low calibration point dropped? If yes, notify PM of change to PQLs.		✓	
4) Is the linear regression ≥0.995 for the analytes of interest?	✓		
5) Was the PQV standard analyzed & evaluated for DW samples ? (Fail in LIMS if no DW sxs in WG.)			✓
6) Do the dilution factors on the benchsheet match the sequence in the raw data?	✓		
7) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			✓
8) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
9) Are the % Recoveries of the internal standards within the method limits?	✓		
10) Are all of the QC critera listed in LIMS within specified limits?	✓		
11) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
12) Are all errors properly crossed out (i.e. single-line, dated & initialed)?	✓		
13) Is a current standard/reagent form attached to the workgroup?	✓		
14) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any of the items listed above that are checked "No" state the corrective action/explanation below.

ICP DATA REVIEW CHECKLIST

Reviewed By: AEH
Date: 11/12/08

Approved By: [signature]
Date: 11/12/08

Work Group:	WG255523
Sample Type:	3050
Analysis Date:	11/11/08
Analyst:	EAR

Instrument Checklist	Yes	No	N / A
1) Is the correct run date associated with the workgroup?	√		
2) Are all of the QC critera listed in LIMS within specified limits? **		√	
3) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			√
4) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	√		
5) Is a current standard/reagent form attached to the workgroup?	√		
6) Have all dilutions performed at the bench been checked off on the benchsheet?			√
7) Has any sample on a 2x dilution been checked for proper mixing (review raw data)?			√
8) Is any sample analyzed on dilution appropriately "D" qualified (not required for o-cal, EC, TDS)?			√
9) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			√
10) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

For any item listed above that is checked "No" state the problem and corrective action / resolution in the sections below.

QC/Sample ID	Analytical Problem	Corrective action
L72871-01 SDL	Co = 50%	2G
	Zn = 25%	2G
L72871-01 MS	MS: Mo = 125.6% MSD: Mo = 71% RPD = 29.42%	MC, RD
	Ba = 124.1%	MA
	Cu = -6.8%	M3

** Na 3302 line is used for values > 500 mg/L. LIMS failure(s) of blanks and low level QC standards is due to high "noise."

FIMS/FIAS DATA REVIEW CHECKLIST

Data Reviewer: PMC
Date: 11.18.08

Approved: [signature]
Date: 11.18.8

Work Group: 255825
Sample Type: Hg-T-846
Analysis Date: 11.18.08
Analyst: PMC

	Yes	No	N/A
1.) Does the instrument calibration meet the specified method criteria? (r ≥ 0.995)	✓		
2.) Was the low calibration standard dropped? If Yes, notify PM of change to PQL.		✓	
3.) Are all of the QC critera listed in LIMS within the acceptance limits?	✓		
4.) Are "H" flags for missed hold time appropriate?			✓
5.) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
6.) Are all dilution factors correctly calculated and uploaded? (Soil, Sludge, Water)	✓		
7.) Is any sample prepped / analyzed on dilution appropriately "D" qualified (except o-cal)?			✓
8.) Are dilutions for o-cals in the appropriate range? (explain if "B" or "U" is reported)			✓
9.) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10.) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
11.) Is a current standard/reagent sheet attached to the workgroup?	✓		
12.) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

Continuing Calibration? NO Cal WG# : NONE Digest Time In: 3:39 / 4:30

Digest Date: 11.17.08 Digest Temp: 92°C Digest Time Out: 3:41 / 5.00

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
	All Passing

ACZ Laboratories, Inc.
FIMS/FIAS DATA REVIEW CHECKLIST

Data Reviewer: PMC
Date: 11.18.08

Approved: [signature]
Date: 11.18.08

Work Group:	255826
Sample Type:	Hg-T-846
Analysis Date:	11.18.08
Analyst:	PMC

	Yes	No	N/A
1.) Does the instrument calibration meet the specified method criteria? ($r \geq 0.995$)	✓		
2.) Was the low calibration standard dropped? If Yes, notify PM of change to PQL.		✓	
3.) Are all of the QC critera listed in LIMS within the acceptance limits?	✓		
4.) Are "H" flags for missed hold time appropriate?			✓
5.) Are all samples requiring re-analysis / re-digestion at REDO / REDX status?			✓
6.) Are all dilution factors correctly calculated and uploaded? (Soil, Sludge, Water)	✓		
7.) Is any sample prepped / analyzed on dilution appropriately "D" qualified (except o-cal)?			✓
8.) Are dilutions for o-cals in the appropriate range? (explain if "B" or "U" is reported)			✓
9.) Is the correct sub-sample type entered on the bench sheet (if different than SOP)?			✓
10.) Are all errors properly corrected (i.e. single-line crossout, dated & initialed)?	✓		
11.) Is a current standard/reagent sheet attached to the workgroup?	✓		
12.) **FOR SREV**: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓		

Continuing Calibration? YES Cal WG#: 255825 Digest Time In: 3:39 / 4:30

Digest Date: 11.17.08 Digest Temp: 9.2°C Digest Time Out: 3:41 / 5:00

For any of the items listed above that are checked "No" state the corrective action/explanation below.

QC/Sample ID	Analytical Problem	Corrective action
	All Passing

Data Review and Reagents

Data Reviewer: MSC
Date: 11-10-08

Approved: LMT
Date: 11-10-08

Analyst: MSC

Workgroup: 255413

Analysis Date: 11/10/08

Sample type used: Soil

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?	X		
3. Were proper volumes of reagents used per final volume?	X		
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5. Were the dilution factor calculation checked (final volume, weight, %solid)?	X		
6. Did the RPD pass?			X
7. Does all the spike information correlate with each other?	X		
8. Is the appropriate spike in the computer-designated line?	X		
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?	X		
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?

Data Review and Reagents

Data Reviewer: BJL
Date: 11/7/08

Approved: LwT
Date: 11-7-08

Analyst: BJL

Workgroup: WG255235

Analysis Date: 11/6/08 - 11/7/08

Sample type used: 50 ; 1

Extraction / Digestion / Analysis / Prep / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	X		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?	X		
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?

Data Review and Reagents

Data Reviewer: BJL
Date: 11/6/08

Approved: LWT
Date: 11-7-08

Analyst: BJL

Workgroup: WG255225

Analysis Date: 11/6/08

Sample type used: Soil

Extraction / Digestion / Analysis (Prep) / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	✓		
2. Is the %solid or TS attached for dilution factors?			✓
3. Were proper volumes of reagents used per final volume?			✓
4. Was the proper sub-sample used (as received, <2000, <500, <250, dry)?	✓		
5.Were the dilution factor calculation checked (final volume, weight, %solid)?			✓
6. Did the RPD pass?			✓
7. Does all the spike information correlate with each other?			✓
8. Is the appropriate spike in the computer-designated line?			✓
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	✓		
10. Is the standard/reagent information complete and current?			✓
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?	✓

Data Review and Reagents

Data Reviewer: BSL
Date: 11/10/08

Approved: LMT
Date: 11-10-08

Analyst: BSL

Workgroup: WG255349

Analysis Date: 11/10/08

Sample type used: Soil

Extraction / Digestion / Analysis (Prep) / Calc:

	Yes	No	N/A
1. Is the raw data checked to the computer printout for transcription errors?	X		
2. Is the %solid or TS attached for dilution factors?			X
3. Were proper volumes of reagents used per final volume?			X
4. Was the proper sub-sample used (as received, <2000, <500, <250, (dry))?	X		
5. Were the dilution factor calculation checked (final volume, weight, %solid)?			X
6. Did the RPD pass?			X
7. Does all the spike information correlate with each other?			X
8. Is the appropriate spike in the computer-designated line?			X
9. Are all errors properly corrected (single-line crossout, dated & initialed)?	X		
10. Is the standard/reagent information complete and current?			X
FOR SREV: QA/QC approval for initial training or 2 sets of initials for WG & LIMS?			

Standard/Reagent	PCN/SCN	Expiration Date

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Project ID: OJ07R9
ACZ Project ID: L72200

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on October 02, 2008. This project has been assigned to ACZ's project number, L72200. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72200. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after November 22, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Sample Receipt

FMI Gold & Copper - Sierrita
OJ07R9

ACZ Project ID: L72200
Date Received: 10/2/2008
Received By:
Date Printed: 10/3/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70511 Sampling Event: July 14th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/11/08

Peer Reviewer: Geoff Webb Date Completed: 08/12/08

This report summarizes the verification of analytical data for 10 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-JS-03-01	SA	L70511-01	S	X
CP-JS-03-1-3	SA	L70511-02	S	X
CP-JS-03-5-7	SA	L70511-03	S	X
E-JS-02-0-1	SA	L70511-04	S	X
E-JS-02-1-3	SA	L70511-05	S	X
E-JS-01-0-1	SA	L70511-06	S	X
E-JS-01-1-3	SA	L70511-07	S	X
E-JS-01-5-7	SA	L70511-08	S	X
EV-JS-01-0-1	SA	L70511-09	S	X
EV-JS-01-1-3	SA	L70511-10	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CP-JS-03-01 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) CP-JS-03-1-3 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) • LD CP-JS-03-5-7 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CP-JS-03-01 could not be evaluated for copper and manganese because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	No	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits, with the exception of an internal standard for the LCS/LCSD analyses for selenium and arsenic. Data qualification based on internal standard recovery failures for QC samples is not considered necessary. Therefore, further action was not necessary.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs with non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Selenium (Work Group: WG248917)	MB	0.06 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was

			reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Selenium (Work Group: WG249115)	MB	0.116 mg/Kg	As the blank contamination was reported at a concentration >2.2x the analyte MDL, the associated selenium results were flagged with B4.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

B4 = Target analyte detected in the blank at or above the method acceptance criteria.

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
CP-JS-03-1-3	Antimony	**37.6**/ **36.4** (75-125)	As the potential bias was considered to be low, the antimony result for sample CP-JS-03-1-3 was flagged with a M2.
CP-JS-03-01	Barium	111/ **150.6** (75-125)	As the potential bias was considered to be high, the barium and molybdenum result for sample CP-JS-03-01 was flagged with a M1.
	Molybdenum	107.9/ **131.1** (75-125)	

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70512 Sampling Event: July 11th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/02/08

Peer Reviewer: Geoff Webb Date Completed: 09/02/08

This report summarizes the verification of analytical data for 18 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-N08-1-3	SA	L70512-01	S	X
CP-N08-5-7	SA	L70512-02	S	X
CP-N08-10-11	SA	L70512-03	S	X
CP-O09-0-1	SA	L70512-04	S	X
CP-O09-1-3	SA	L70512-05	S	X
CP-O09-5-7	SA	L70512-06	S	X

CP-003-0-1	SA	L70512-12	S	X
CP-003-1-3	SA	L70512-13	S	X
CP-M06-0-1	SA	L70512-14	S	X
CP-M06-1-3	SA	L70512-15	S	X
CP-JS-02-0-1	SA	L70512-16	S	X
CP-JS-02-1-3	SA	L70512-17	S	X
CP-N08-0-1	SA	L70512-18	S	X

Matrix: S = Soil QC Type: SA = Sample

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 3.6°C and 2.9°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required. The results are reported on a dry weight basis, but the RLs and MDLs are not corrected for percent solids.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CP-N08-0-1 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) CP-N08-1-3 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) CP-M04-1-2.5 (Mercury) • LD CP-N08-1-3 (Percent Solids)	No	With the exceptions noted in Table 1 and Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CP-N08-1-3 could not be evaluated for copper and manganese because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
CP-N08-0-1	Antimony	**52.6**/ **57.8** (75-125)	As the potential bias was considered to be low, the listed analytical results were flagged with a M2.
CP-N08-1-3	Beryllium	88.9/ **67.3** (75-125)	
	Cadmium	86.3/ **74.3** (75-125)	
	Chromium	85/ **60.4** (75-125)	
	Cobalt	81.6/ **56.8** (75-125)	
	Molybdenum	**61.8**/ **-51.5** (75-125)	
	Nickel	83.2/ **59.4** (75-125)	
	Zinc	**36.4**/ **-43.8** (75-125)	
CP-N08-1-3	Barium	88.4/ **150.2** (75-125)	As the potential bias was considered to be high, the barium result for sample CP-JS-03-01 was flagged with a M1.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

Table 2: MS/MSD RPD Outliers and Resultant Data Qualification

Sample	Analyte	RPD (Limit)	Qualification
CP-N08-1-3	Beryllium	27.36 (20)	The listed analytical results for sample CP-N08-1-3 were flagged with a R8.
	Chromium	28.38 (20)	
	Cobalt	26.62 (20)	
	Molybdenum	37.73 (20)	
	Nickel	26.73 (20)	
	Zinc	25.45 (20)	

RPD – Relative Percent Difference R8 – Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70514 Sampling Event: July 14th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/11/08

Peer Reviewer: Geoff Webb Date Completed: 08/12/08

This report summarizes the verification of analytical data for 4 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
EV-JS-01-5-7	SA	L70514-01	S	X
EV-JS-02-0-1	SA	L70514-02	S	X
EV-JS-02-1-3	SA	L70514-03	S	X
EV-JS-02-5-7	SA	L70514-04	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 2.6°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary.

Review Parameter	Criteria Met?	Comments
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exception noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD N/A • LD N/A	N/A	Since a sample from this work order was not the sample selected for quality control (QC), QC results were not included in this report.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	No	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits, with the exception of an internal standard for the arsenic and selenium LCS/LCSD analyses. Data qualification based on internal standard recovery failures for QC samples is not considered necessary. Further action was not necessary.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs with non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Selenium	MB	0.06 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70543 Sampling Event: July 15th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/11/08

Peer Reviewer: Geoff Webb Date Completed: 08/12/08

This report summarizes the verification of analytical data for 8 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-JS-01-0-1	SA	L70543-01	S	X
CP-JS-01-1-3	SA	L70543-02	S	X
CP-JS-01-5-7	SA	L70543-03	S	X
CP-JS-01-10-12	SA	L70543-04	S	X
CP-P04-0-1	SA	L70543-05	S	X
CP-P04-1-3	SA	L70543-06	S	X
CP-P05-0-1	SA	L70543-07	S	X
CP-P05-1-3	SA	L70543-08	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.

Review Parameter	Criteria Met?	Comments
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	No target analytes were detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CP-JS-01-1-3 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) CP-JS-01-0-1 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) • LD CP-JS01-0-1 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CP-JS-01-0-1could not be evaluated for barium, copper and manganese because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not necessary.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs with non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
CP-JS-01-1-3	Antimony	**32.4**/ **34.9** (75-125)	As the potential bias was considered to be low, the antimony result for sample CP-JS-01-1-3 was flagged with a M2.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70544 Sampling Event: July 17th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/27/08

Peer Reviewer: Geoff Webb Date Completed: 08/27/08

This report summarizes the verification of analytical data for 10 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-SD-01-0-1.5	SA	L70544-01	S	X
CP-SD-01-1.5-3.0	SA	L70544-02	S	X
CP-SD-02-0-1.5	SA	L70544-03	S	X
CP-SD-02-1.5-3.0	SA	L70544-04	S	X
CP-SD-06-0-1.5	SA	L70544-05	S	X
CP-SD-06-1.5-3.0	SA	L70544-06	S	X
CP-SD-05-0-1.5	SA	L70544-07	S	X
CP-SD-05-1.5-3.0	SA	L70544-08	S	X
CP-SD-03-0-1.5	SA	L70544-09	S	X
CP-SD-03-1.5-3.0	SA	L70544-10	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 4.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required.
Holding Times	Yes	
Method Blanks	Yes	Target analytes were not detected in the method blanks.
Matrix QC • MS/MSD N/A • LD N/A	N/A	Since a sample from this work order was not the selected quality control sample, quality control results were not included in this report.
Method QC • Serial Dilution N/A • Internal Standards	N/A	
	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Qualification of data was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70584 Sampling Event: July 17th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/11/08

Peer Reviewer: Geoff Webb Date Completed: 08/12/08

This report summarizes the verification of analytical data for 5 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-P07-0-1	SA	L70584-01	S	X
CP-P07-1-3	SA	L70584-02	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.

Review Parameter	Criteria Met?	Comments
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.4°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	No target analytes were detected in the method blanks or continuing calibration blanks. Data qualification was not necessary.
Matrix QC • MS/MSD N/A • LD N/A	N/A	Since a sample from this work order was not the sample selected for quality control (QC), QC results were not included in this report.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not necessary.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs with non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70791 Sampling Event: July 23rd & 28th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 20 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/or matrix spike duplicate.

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 3.4°C and 0.7°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CP-Q09-0-1 (Antimony, Arsenic, Lead, Mercury, Selenium, Thallium, Uranium) OD-SD-03-1.5-3.0 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) • LD CP-Q09-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample OD-SD-03-1.5-3.0 could not be evaluated for copper, manganese, and zinc because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.

Review Parameter	Criteria Met?	Comments
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Antimony	MB	0.25 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
CP-Q09-0-1	Antimony	**40.2**/ **40.8** (75-125)	As the potential bias was considered to be low, the antimony result for sample CP-Q09-0-1 was flagged with a M2.
OD-SD-03-1.5-3.0	Barium	**163.1**/ **162.2** (75-125)	As the potential bias was considered to be high, the barium result for sample OD-SD-03-1.5-3.0 was flagged with a M1.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70819 Sampling Event: July 29th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 08/27/08

Peer Reviewer: Geoff Webb Date Completed: 08/27/08

This report summarizes the verification of analytical data for 15 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
OD-SD-05-0-1.5	SA	L70819-01	S	X^M
OD-SD-05-1.5-3.0	SA	L70819-02	S	X
OD-SD-06-0-1.5	SA	L70819-03	S	X
OD-SD-06-1.5-3.0	SA	L70819-04	S	X
OD-JS-01-0-1	SA	L70819-05	S	X
OD-JS-01-1-3	SA	L70819-06	S	X
OD-JS-02-0-1	SA	L70819-07	S	X
OD-JS-02-1-3	SA	L70819-08	S	X
OD-JS-02-5-7	SA	L70819-09	S	X
EM-C22-0-1	SA	L70819-10	S	X
EM-C22-1-3	SA	L70819-11	S	X
EM-C22-5-7	SA	L70819-12	S	X
EM-E24-0-1	SA	L70819-13	S	X
EM-E24-1-3	SA	L70819-14	S	X
EM-E24-5-7	SA	L70819-15	S	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

X^M = Matrix spike and/or matrix spike duplicate.

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 5.6°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Qualification of data was not required.
Matrix QC • MS/MSD OD-SD-05-0-1.5 (Total Barium, Total Beryllium, Total Cadmium, Total Cobalt, Total Mercury, Total Molybdenum, Total Nickel, Total Zinc) • LD OD-SD-05-0-1.5 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample OD-SD-05-0-1.5 could not be evaluated for copper and manganese because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not required. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Qualification of data was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
OD-SD-05-0-1.5	Total Barium	**157.6**/ **129.4** (75-125)	As the potential bias was considered to be high, the barium result for sample OD-SD-05-0-1.5 was flagged with a M1.

%R = Percent Recovery M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70909 Sampling Event: July 23rd & 28th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 6 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
EM-H22-0-1	SA	L70909-01	S	X[m]
EM-H22-1-3	SA	L70909-02	S	X
EM-H22-5-7	SA	L70909-03	S	X
EM-K24-0-1	SA	L70909-04	S	X
EM-K24-1-3	SA	L70909-05	S	X
EM-K24-5-7	SA	L70909-06	S	X

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/ or matrix spike duplicate.

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 4.1°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD EM-H22-0-1 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) • LD EM-H22-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample EM-H22-0-1 could not be evaluated for copper, molybdenum, and zinc because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Cobalt	MB	1 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Lead	MB	0.064 mg/Kg	

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
EM-H22-0-1	Barium	**41.9**/ **47.7** (75-125)	As the potential bias was considered to be low, the barium result for sample EM-H22-0-1 was flagged with a M2.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70948 Sampling Event: August 1st, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 11/19/08

Peer Reviewer: Geoff Webb Date Completed: 11/20/08

This report summarizes the verification of analytical data for 12 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
EM-JS-01-0-1	SA	L70948-01	S	X
EM-JS-01-1-3	SA	L70948-02	S	X
EM-JS-02-0-1	SA	L70948-03	S	X
EM-JS-02-1-3	SA	L70948-04	S	X
EM-M26-0-1	SA	L70948-05	S	X
EM-M26-1-3	SA	L70948-06	S	X
EM-M26-5-7	SA	L70948-07	S	X
C-JS-01-0-1	SA	L70948-08	S	X
C-JS-01-1-3	SA	L70948-09	S	X^m
C-JS-02-0-1	SA	L70948-10	S	X
C-JS-02-1-3	SA	L70948-11	S	X
C-JS-02-5-7	SA	L70948-12	S	X^m

Matrix: S = Soil QC Type: SA = Sample

X^m – Matrix spike and/or matrix spike duplicate recovery.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1 below, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD C-JS-02-5-7 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) C-JS-01-1-3 (Mercury) • LD None	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary.
Method QC • Serial Dilution N/A • Internal Standards	N/A	
	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	Yes	

Table 1: Method Blank Outliers and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Cobalt (WG250314)	MB	1 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Lead (WG250322)	MB	0.064 mg/Kg	
Thallium (WG250322)	MB	0.133 mg/Kg	As the blank contamination was reported at a concentration >2.2x the analyte MDL, the associated thallium results were flagged with B4.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

B4 = Target analyte detected in the blank at or above the method acceptance criteria.

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
C-JS-02-5-7	Total Antimony	**39.4**/ **31.5** (75-125)	**22.22** (20)	As the potential bias was considered to be low, the total antimony and total lead result for the associated parent sample was flagged with a M2. As the total antimony and total lead RPDs were not within acceptance limits, the total antimony and total lead results were also flagged with an R8.
	Total Lead (WG250322)	120.9/ **68.7** (75-125)	**21.91** (20)	

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

R8 = Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L70949 Sampling Event: August 4th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 13 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
C-JS-03-0-1	SA	L70949-01	S	X
C-JS-03-1-3	SA	L70949-02	S	X
C-JS-03-5-7	SA	L70949-03	S	X
C-JS-03-10-12	SA	L70949-04	S	X
C-JS-03-15-17	SA	L70949-05	S	X
CS-JS-01-0-1	SA	L70949-06	S	X
CS-JS-01-1-3	SA	L70949-07	S	X
CS-JS-01-5-7	SA	L70949-08	S	X
CS-JS-01-10-12	SA	L70949-09	S	X
CS-JS-02-0-1	SA	L70949-10	S	X
CS-JS-02-1-3	SA	L70949-11	S	X
CS-JS-02-5-7	SA	L70949-12	S	X
CS-JS-02-10-11	SA	L70949-13	S	X^m

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/ or matrix spike duplicate.

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 2.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CS-JS-02-10-11 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) • LD C-JS-03-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CS-JS-02-10-11 could not be evaluated for lead because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Arsenic	MB	0.43 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Lead	MB	0.091 mg/Kg	
Selenium	MB	0.115 mg/Kg	As the blank contamination was reported at a concentration >2.2x the analyte MDL, the associated selenium results were flagged with B4.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

B4 = Target analyte detected in blank at or above method acceptance criteria.

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
CS-JS-02-10-11	Antimony	**42.5**/ **41.2** (75-125)	2.47 (20)	As the potential bias was considered to be low, the antimony result for sample CS-JS-02-10-11 was flagged with a M2.

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71009 Sampling Event: August 5th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/02/08

Peer Reviewer: Geoff Webb Date Completed: 09/02/08

This report summarizes the verification of analytical data for 11 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
C-JS-03-0-1	SA	L71009-01	S	X
C-JS-03-1-3	SA	L71009-02	S	X

Matrix: S = Soil QC Type: SA = Sample

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 4.7°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required. The results are reported on a dry weight basis, but the RLs and MDLs are not corrected for percent solids.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD C-JS-05-0-1 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) C-JS-05-1-3 (Barium, Beryllium, Cadmium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) • LD C-JS-03-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for samples CP-JS-05-0-1 and C-JS-05-1-3 could not be evaluated for lead and copper, respectively, because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	No	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Beryllium (Work Group WG250412)	MB	0.24 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
	ICB	0.0028 mg/L	
Cobalt (Work Group WG250412)	MB	1.1 mg/Kg	

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit
ICB – Initial Calibration Blank

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
C-JS-05-0-1	Antimony	**32.7**/ **38.4** (75-125)	As the potential bias was considered to be low, the antimony result for sample C-JS-05-0-1 was flagged with a M2.
C-JS-05-1-3	Barium	**138.8**/ **128.1** (75-125)	As the potential bias was considered to be high, the listed analytical results for sample C-JS-05-1-3 were flagged with a M1.
	Manganese	**158**/ **133.6** (75-125)	
	Zinc	**187**/ **174.4** (75-125)	

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.
M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71011 Sampling Event: August 6th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/02/08

Peer Reviewer: Geoff Webb Date Completed: 09/02/08

This report summarizes the verification of analytical data for 11 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

EM-N29-1-3	SA	L71011-11	S	X

Matrix: S = Soil QC Type: SA = Sample

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.8°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required. The results are reported on a dry weight basis, but the RLs and MDLs are not corrected for percent solids.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD CS-JS-04-1-3 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) CS-JS-04-0-1 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) EM-X26-0-1 (Mercury) • LD CP-JS-04-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CP-JS-04-0-1 could not be evaluated for copper, manganese, molybdenum and zinc because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits, Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/ LCSD)	Yes	All LCS/LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Total Barium	MB	0.52 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
CS-JS-04-1-3	Antimony	**39.4**/ **39.8** (75-125)	As the potential bias was considered to be low, the antimony result for sample CP-JS-04-1-3 was flagged with a M2.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71041 Sampling Event: August 7th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/17/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 15 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

EM-P24-5-7	SA	L71041-15	S	X

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/or matrix spike duplicate.

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 2.9°C upon arrival at the laboratory, which met the criterion of ≤6°C. Data qualification was not required. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD EM-G27-1-3 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) EM-G27-0-1 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) RA-JS-03-1-3 (Mercury) • LD EM-G27-0-1 (Percent Solids)	No	With the exceptions noted in Table 1, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample EM-G27-0-1 could not be evaluated for copper, manganese, and molybdenum because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	

Review Parameter	Criteria Met?	Comments
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
EM-G27-1-3	Antimony	**36.8**/ **36.4** (75-125)	As the potential bias was considered to be low, the listed analytical results were flagged with a M2.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71083 Sampling Event: August 11th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 3 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
RA-SD-02-0-1.5/D/MS/	SA	L71083-01	S	X[m]
RA-SD-02-1.5-3.0/D/M	SA	L71083-02	S	X[m]
RA-SD-01-0-1.5/D/MS/	SA	L71083-03	S	X[m]

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/or matrix spike duplicate.

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 2.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Data qualification was not required. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions summarized in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD RA-SD-02-0-1.5/D/MS/ (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) RA-SD-02-1.5-3.0/D/M (Mercury) RA-SD-01-0-1.5/D/MS/ (Mercury) • LD N/A	Yes	The recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample RA-SD-02-0-1.5/D/MS/ could not be evaluated for copper and molybdenum because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary.
Method QC • Serial Dilution N/A • Internal Standards	N/A	
	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Method Blank Outliers and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Antimony (Batch WG250512)	MB	0.28 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Arsenic (Batch WG250512)	MB	1.45 mg/Kg	As the blank contamination was reported at a concentration >2.2x the analyte MDL, the associated arsenic results were flagged with B4.
Selenium (Batch WG250512)	MB	0.06 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

B4 = Target analyte detected in the blank at or above the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71084 Sampling Event: August 11th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/17/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 5 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
RA-SD-01-1.5-3.0/D/M	SA	L71084-01	S	X[m]
RA-JS-02-0-1/D/MS/MS	SA	L71084-02	S	X[m]
RA-JS-02-1-3/D/MS/MS	SA	L71084-03	S	X[m]
RA-JS-02-5-7	SA	L71084-04	S	X
RA-JS-02-5-7D	SA	L71084-05	S	X

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/or matrix spike duplicate.

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 3.7°C and 2.3°C upon arrival at the laboratory, which met the criterion of ≤6°C. Data qualification was not required. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exception summarized in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD RA-SD-01-1.5-3.0/D/M (Mercury) RA-JS-02-0-1/D/MS/MS (Mercury) RA-JS-02-1-3/D/MS/MS (Mercury) • LD RA-JS-02-1-3/D/MS/MS (Percent Solids)	Yes	The recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Data qualification was not required. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Outliers and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Antimony (Batch WG250512)	MB	0.28 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Arsenic (Batch WG250512)	MB	1.45 mg/Kg	As the blank contamination was reported at a concentration >2.2x the analyte MDL, the associated arsenic and selenium results were flagged with B4.
Selenium (Batch WG250786 –Samples analyzed on 08/28/08)	MB	0.301 mg/Kg	
Selenium (Batch WG250852-Samples analyzed on 08/29/08)	MB	0.06 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.

MB – Method Blank mg/Kg – Milligrams per Kilogram MDL – Method Detection Limit

B4 = Target analyte detected in the blank at or above the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71134 Sampling Event: August 12th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 17 soil samples. The soil samples were analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
RP-JS-02-0-1	SA	L71134-01	S	X
RP-JS-02-1-3	SA	L71134-02	S	X
RP-JS-02-1-3D	SA	L71134-03	S	X
RP-JS-02-5-7	SA	L71134-04	S	X
RP-JS-02-10-12	SA	L71134-05	S	X
RP-JS-02-15-17	SA	L71134-06	S	X
RP-JS-01-0-1	SA	L71134-07	S	X
RP-JS-01-1-3	SA	L71134-08	S	X
RP-JS-01-1-3D	SA	L71134-09	S	X
RP-JS-01-5-7	SA	L71134-10	S	X
RP-JS-01-10-12	SA	L71134-11	S	X
RP-JS-01-15-17	SA	L71134-12	S	X

EM-JS-08-1-3	SA	L71134-14	S	X
EM-JS-08-1-3D	SA	L71134-15	S	X
EM-JS-08-5-7	SA	L71134-16	S	X^m
EM-JS-08-10-12	SA	L71134-17	S	X^m

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/or matrix spike duplicate.

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 1.7°C and 3.9°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not required. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD EM-JS-08-10-12 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) EM-JS-08-5-7 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) • LD RP-JS-02-1-3 (Percent Solids)	No	With the exceptions noted in Table 1, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample EM-JS-08-5-7 could not be evaluated for copper, manganese, molybdenum, and zinc because the results in the native sample were greater than four times the concentration of the spike added during digestion. The MS/MSD recoveries for sample EM-JS-08-10-12 could not be evaluated for lead because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	No	With the exception noted in Table 2, all LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits.
Elevated RLs without associated non-detect results	Yes	

Review Parameter	Criteria Met?	Comments
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	Qualification
EM-JS-08-10-12	Antimony	**57.2**/ **62.8** (75-125)	As the potential bias was considered to be low, the listed analytical results were flagged with a M2.
EM-JS-08-5-7	Chromium	96.2/ **126.5** (75-125)	As the potential bias was considered to be high, the chromium result for sample EM-JS-08-5-7 was flagged with a M1.

%R = Percent Recovery M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

Table 2: LCS/ LCSD Recovery Outliers and Resultant Data Qualification

Associated Sample	Analyte	%R (%)	Qualification
Batch WG250513 (All Samples)	Arsenic	**271.1**/ 263.2 (181-270)	As the potential bias was high, all detected arsenic results were flagged with a L1.

%R – Percent Recovery L1 – The associated blank spike recovery was above the laboratory acceptance limits.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71174 Sampling Event: August 13th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 09/16/08

Peer Reviewer: Geoff Webb Date Completed: 09/17/08

This report summarizes the verification of analytical data for 1 soil sample. The soil sample was analyzed for total metals by Method 6020, Method 6010, and Method 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
EQUIP-1	SA	L71174-01	W	X

Matrix: W = Water QC Type: SA = Sample

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

__X__ Data are usable without qualification.

_____ Data are usable with qualification (noted below).

_____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 5.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary.
Holding Times	Yes	
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD N/A • LD N/A	Yes	Since sample EQUIP-1 was not the selected quality control sample, quality control results were not included in this report.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A

EM-JS-07-5-7	SA	L71176-07	S	X
EM-JS-07-10-12	SA	L71176-08	S	X
EM-JS-07-15-16	SA	L71176-09	S	X^m

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/ or matrix spike duplicate.

--- = Not sampled for this parameter

Total Metals = Antimony, Arsenic, Lead, Selenium, Thallium, and Uranium (6020); Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, and Zinc (6010); Mercury (7471A)

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 5.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	
Method Blanks Calibration Blanks	No	With the exceptions noted in Table 1, target analytes were not detected in the method blanks or continuing calibration blanks.
Matrix QC • MS/MSD EM-JS-07-15-16 (Antimony, Arsenic, Lead, Mercury, Selenium, Thallium, Uranium) • LD EM-JS-06-0-1 (Percent Solids)	No	With the exceptions noted in Table 2 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample EM-JS-07-15-16 could not be evaluated for lead because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: Blank Contamination and Resultant Data Qualification

Analyte	Blank	Concentration	Qualification
Antimony	MB	0.28 mg/Kg	None. Blank contamination was less than the method reporting limit. Therefore, as the blank contamination was reported at a concentration <2.2x the analyte MDL, no qualification of data was required.
Selenium	MB	0.06 mg/Kg	

MB = Method Blank mg/Kg = Milligrams per Kilogram MDL = Method Detection Limit

Table 2: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
EM-JS-07-15-16	Thallium	113.4/ **127.4** (75-125)	11.48 (20)	As the potential bias was considered to be high, the thallium and uranium result for sample EM-JS-07-15-16 was flagged with a M1. As the uranium RPD was not within acceptance limits for sample EM-JS-07-15-16, the uranium result was also flagged with an R8.
	Uranium	85.1/ **240.6** (75-125)	**34.37** (20)	

%R = Percent Recovery

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

R8 = Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71473 Sampling Event: August 27th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 10/06/08

Peer Reviewer: Geoff Webb Date Completed: 10/07/08

This report summarizes the verification of analytical data for 14 soil samples. The soil samples were analyzed for total metals by methods 6020, 6010B, and 7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
CP-JS-04-0-1	SA	L71473-01	S	X[m]
CP-JS-04-1-3	SA	L71473-02	S	X
CP-JS-04-5-7	SA	L71473-03	S	X
CP-JS-04-10-12	SA	L71473-04	S	X
CP-JS-04-15-17	SA	L71473-05	S	X
CP-JS-04-20	SA	L71473-06	S	X
OD-JS-03-0-1	SA	L71473-07	S	X
OD-JS-03-1-3	SA	L71473-08	S	X
OD-JS-03-1-3D	FD	L71473-09	S	X
CS-JS-05-0-1	SA	L71473-10	S	X
CS-JS-05-1-3	SA	L71473-11	S	X
CS-JS-05-1-3D	FD	L71473-12	S	X
CS-JS-06-0-1	SA	L71473-13	S	X
CS-JS-06-1-3	SA	L71473-14	S	X[m]

Matrix: S = Soil QC Type: SA = Sample m = Matrix spike and/ or matrix spike duplicate.

--- = Not analyzed for this parameter

Total Metals = Antimony, Arsenic, Barium, Beryllium, cadmium, Chromium, Cobalt, Copper, Lead, manganese, Mercury, Molybdenum, Nickel, Selenium, Thallium, Uranium, and Zinc

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 2.7°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD CS-JS-06-1-3 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) CP-JS-04-01 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Manganese, Mercury, Molybdenum, Nickel) • LD CP-JS-04-1-3 (Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Lead, Manganese, Molybdenum, Nickel, Selenium, Thallium, Uranium) CS-JS-06-1-3 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The MS/MSD recoveries for sample CP-JS-04-01 could not be evaluated for total manganese and total molybdenum because the results in the native sample were greater than four times the concentration of the spike added during digestion. Since the sample concentrations are so much greater than the spike added, the MS/MSD recoveries are not considered to be a representative measure of accuracy. Further action or qualification was not necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for total metals and percent solids. With the exceptions noted in Table 2, all of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate OD-JS-03-1-3D CS-JS-05-1-3D • Field Blank N/A	Yes	The field duplicate pairs OD-JS-03-1-3/ OD-JS-03-1-3D and CS-JS-05-1-3/ OD-JS-05-1-3D met the applicable evaluation criteria. Data qualification was not required.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.

Review Parameter	Criteria Met?	Comments
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery and RPD Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
CS-JS-06-1-3 WG251542	Total Antimony	**27.3**/ **29.1** (75-125)	5.54 (20)	As the potential bias was considered to be low, the total antimony and total barium result was flagged with a M2.
CS-JS-06-1-3 WG251755		**30.3**/ **30.1** (75-125)	0.66 (20)	
CP-JS-04-01	Total Barium	**54.7**/ **45.2** (75-125)	2.52 (20)	
	Total Chromium	11.3/ 88.7 (75-125)	**20.54** (20)	As the total chromium RPD was not within acceptance limits, the total chromium result was flagged with an R8.

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

R8 = Sample RPD exceeded the method acceptance criteria.

Table 2: Laboratory Duplicate RPD Outliers and Resultant Data Qualification

Sample	Analyte	RPD (Limit)	Qualification
CP-JS-04-1-3	Total Chromium	**38.7** (20)	As the listed analytical results RPDs were not within acceptance limits, the total chromium, total selenium, total thallium, and total uranium results for sample CP-JS-04-1-3 were flagged with an R8.
CP-JS-04-1-3 WG251542	Total Selenium	**47.7** (20)	
CP-JS-04-1-3 WG251755		**46.4** (20)	
CP-JS-04-1-3 WG251755	Total Thallium	**24** (20)	
CP-JS-04-1-3 WG251542	Total Uranium	**22.1** (20)	
CP-JS-04-1-3 WG251755		**23.2** (20)	

RPD – relative Percent Difference R8 = Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71687 Sampling Event: August 5th, 12th, & 13th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 10/06/08

Peer Reviewer: Geoff Webb Date Completed: 10/07/08

This report summarizes the verification of analytical data for 6 soil samples. The soil samples were analyzed for total lead and hexavalent chromium by methods 6010B and M7196A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses	
				Total Lead	Hexavalent Chromium
C-JS-05-0-1	SA	L71687-01	S	X	---

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate
m = Matrix spike and/ or matrix spike duplicate.
--- = Not analyzed for this parameter

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

_____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

_____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 5.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected. The laboratory noted that this report is for additional analysis of the samples previously reported in data packages L71009, L71176 and L71134.
Holding Times	Yes	All samples were analyzed within holding time requirements.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD EM-JS-08-5-7 (Total Lead) EM-JS-08-10-12 (Hexavalent Chromium) • LD EM-JS-07-10-12 (Hexavalent Chromium)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The agreement between parent sample results and the lab duplicate sample results was evaluated for hexavalent. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A • Internal Standards	N/A	
	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
EM-JS-08-10-12	Hexavalent Chromium	**0** (75-125)	NA	As the potential bias was considered to be low, the hexavalent chromium result was flagged with a M2.

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L71753 Sampling Event: August 11th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 10/06/08

Peer Reviewer: Geoff Webb Date Completed: 10/07/08

This report summarizes the verification of analytical data for 3 soil samples. The soil samples were analyzed for total lead and hexavalent chromium by methods 6010B and M7196A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses	
				Total Lead	Hexavalent Chromium
RA-JS-02-1-3	SA	L71753-01	S	X	---
RA-JS-02-5-7	SA	L71753-02	S	---	X^m
RA-JS-02-5-7D	FD	L71753-03	S	---	X

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate
m = Matrix spike and/ or matrix spike duplicate.
--- = Not analyzed for this parameter

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 5.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected. The laboratory noted that this report is for additional analysis of the samples previously reported in data package L71084.
Holding Times	No	The laboratory noted that the hexavalent chromium analysis for samples RA-JS-02-5-7 and RA-JS-02-5-7D was performed past holding time. Therefore, the hexavalent chromium results for samples RA-JS-02-5-7 and RA-JS-02-5-7D were flagged with H1.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD RA-JS-02-5-7 (Hexavalent Chromium) • LD RA-JS-02-5-7D (Hexavalent Chromium) RA-JS-02-1-3 (Total Lead)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The agreement between parent sample results and the lab duplicate sample results was evaluated for hexavalent chromium and total lead. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate RA-JS-02-5-7D • Field Blank N/A	Yes	The field duplicate pair RA-JS-02-5-7/ RA-JS-02-5-7D met the applicable evaluation criteria. Data qualification was not required.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	N/A	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
RA-JS-02-5-7	Hexavalent Chromium	**37.5** (75-125)	NA	As the potential bias was considered to be low, the hexavalent chromium result was flagged with a M2.

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L72198
Sampling Event: September 17th -19th & 26th, 2008
Sample-specific Parameter Review? **Yes**
Laboratory Performance Parameters? **No**
Data Reviewer: Liz Kraak
Date Completed: 11/19/08
Peer Reviewer: Geoff Webb
Date Completed: 11/20/08

This report summarizes the verification of analytical data for 14 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
ET-SB01-0-20	SA	L72198-01	S	X^m
ET-SB01-20-40	SA	L72198-02	S	X^m
ET-SB01-40-60	SA	L72198-03	S	X
ET-SB01-60-80	SA	L72198-04	S	X
ET-SB01-80-100	SA	L72198-05	S	X
ET-SB02-0-20	SA	L72198-06	S	X
ET-SB02-20-40	SA	L72198-07	S	X
ET-SB02-40-50	SA	L72198-08	S	X
ET-SB02-50-60	SA	L72198-09	S	X
ET-SB02-60-80	SA	L72198-10	S	X
ET-SB02-80-100	SA	L72198-11	S	X

ST-SB01-220-235.5	SA	L72198-13	S	X
ST-SB01-237-255.5	SA	L72198-14	S	X

Matrix: S = Soil QC Type: SA = Sample
X^m – Matrix spike and/or matrix spike duplicate recovery.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 4.5°C and 3.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD ET-SB01-0-20 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) ET-SB01-20-40 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) • LD ET-SB01-0-20 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	

Review Parameter	Criteria Met?	Comments
Other Parameters	Yes	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
ET-SB01-20-40	Total Antimony	**53.1**/ **58.6** (75-125)	8.43 (20)	As the potential bias was considered to be low, the total antimony and total molybdenum results for the associated parent samples were flagged with a M2.
ET-SB01-0-20	Total Molybdenum	**64.6**/ 92.5 (75-125)	14.29 (20)	

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L72199 Sampling Event: September 24th & 25th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 11/19/08

Peer Reviewer: Geoff Webb Date Completed: 11/20/08

This report summarizes the verification of analytical data for 10 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
ST-SB01-0-20	SA	L72199-01	S	X^m
ST-SB01-20-40	SA	L72199-02	S	X^m
ST-SB01-40-60	SA	L72199-03	S	X
ST-SB01-60-80	SA	L72199-04	S	X
ST-SB01-80-100	SA	L72199-05	S	X
ST-SB01-100-120	SA	L72199-06	S	X
ST-SB01-120-140	SA	L72199-07	S	X
ST-SB01-140-160	SA	L72199-08	S	X
ST-SB01-160-180	SA	L72199-09	S	X
ST-SB01-180-200	SA	L72199-10	S	X

Matrix: S = Soil QC Type: SA = Sample

X^m – Matrix spike and/or matrix spike duplicate recovery.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 3.5°C and 4.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD ST-SB01-20-40 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) ST-SB01-0-20 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) • LD ST-SB01-0-20 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	Yes	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
ST-SB01-20-40	Total Antimony	**63.4**/ **59** (75-125)	6.36 (20)	As the potential bias was considered to be low, the total antimony, total antimony, and total lead results for the associated parent sample were flagged with a M2.
ST-SB01-0-20	Total Molybdenum	**128.6**/ 80.4 (75-125)	**27.62** (20)	As the potential bias was considered to be high, the total antimony result for the associated parent sample was flagged with a M1. As the total antimony RPD was not within acceptance limits, the total antimony result was also flagged with an R8.

%R = Percent Recovery

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

R8 = Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L72397 Sampling Event: October 3rd, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 11/12/08

Peer Reviewer: Geoff Webb Date Completed: 11/13/08

This report summarizes the verification of analytical data for 18 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
ST-SB03 200-210	SA	L72397-01	S	X^m
ST-SB04 0-20	SA	L72397-02	S	X^m
ST-SB04 20-40	SA	L72397-03	S	X
ST-SB04 40-60	SA	L72397-04	S	X
ST-SB04 60-80	SA	L72397-05	S	X
ST-SB04 80-100	SA	L72397-06	S	X
ST-SB04 100-120	SA	L72397-07	S	X
ST-SB04 120-140	SA	L72397-08	S	X
ST-SB03 0-20	SA	L72397-09	S	X
ST-SB03 20-40	SA	L72397-10	S	X
ST-SB03 40-60	SA	L72397-11	S	X
ST-SB03 60-80	SA	L72397-12	S	X
ST-SB03 80-100	SA	L72397-13	S	X
ST-SB03 100-120	SA	L72397-14	S	X
ST-SB03 120-140	SA	L72397-15	S	X
ST-SB03 140-160	SA	L72397-16	S	X
ST-SB03 160-180	SA	L72397-17	S	X
ST-SB03 180-200	SA	L72397-18	S	X

Matrix: S = Soil QC Type: SA = Sample

X^m = Matrix spike and/or matrix spike duplicate recovery.

m = Matrix spike and/ or matrix spike duplicate.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 0.8°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD ST-SB04 0-20 (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) ST-SB03 200-210 (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Mercury, Molybdenum, Nickel, Zinc) • LD ST-SB03 180-200 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	No	**Interference Check Standards** The laboratory noted that associated ICSA QC sample failed at 0.00105 mg/L. As the interferent elements of aluminum, calcium, iron, and magnesium were not reported in this data package, interference check standards could not be evaluated and further action was not necessary.

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
ST-SB04 0-20	Total Antimony	**35**/ **12** (75-125)	**32.17** (20)	As the potential bias was considered to be low, the total antimony result was flagged with a M2. As the total antimony RPD was not within acceptance limits, the total antimony result was also flagged with an R8.
ST-SB03 200-210	Total Copper	**44.2**/ 90.5 (75-125)	6.88 (20)	As the potential bias was considered to be low, the total copper and total manganese results were flagged with a M2.
	Total Manganese	96.6/ **37.2** (75-125)	11.96 (20)	

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

R8 = Sample RPD exceeded the method acceptance criteria.

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L72452 Sampling Event: August 11th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 11/12/08

Peer Reviewer: Geoff Webb Date Completed: 11/13/08

This report summarizes the verification of analytical data for 6 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
RA-SD-02-0-1.5D	SA	L72452-01	S	X^m
RA-SD-02-1.5-3.0D	SA	L72452-02	S	X^m
RA-SD-01-0-1.5D	SA	L72452-03	S	X
RA-SD-01-1.5-3.0D	SA	L72452-04	S	X
RA-JS-02-0-1D	SA	L72452-05	S	X
RA-JS-02-1-3D	SA	L72452-06	S	X

Matrix: S = Soil QC Type: SA = Sample

X^m – Matrix spike and/or matrix spike duplicate recovery.

m = Matrix spike and/ or matrix spike duplicate.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 0.8°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD RA-SD-02-1.5-3.0D (Antimony, Arsenic, Lead, Selenium, Thallium, Uranium) RA-SD-02-0-1.5D (Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Manganese, Molybdenum, Nickel, Zinc) • LD RA-SD-02-0-1.5D (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	Yes	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
RA-SD-02-1.5-3.0D	Total Antimony	**19.2**/ **36.8** (75-125)	8.23 (20)	As the potential bias was considered to be low, the total antimony, total antimony, and total lead results were flagged with a M2.
	Total Arsenic	**39.4**/ **65.8** (75-125)	9.76 (20)	
	Total Lead	**48.9**/ 82.1 (75-125)	8.03 (20)	

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

RPD = Relative Percent Difference

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L72871 Sampling Event: October 21st, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 02/10/09

Peer Reviewer: Geoff Webb Date Completed: 02/10/09

This report summarizes the verification of analytical data for 18 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
ST-SB06 0-20	SA	L72871-01	S	X^m
ST-SB06 20-40	SA	L72871-02	S	X
ST-SB06 40-60	SA	L72871-03	S	X
ST-SB06 60-80	SA	L72871-04	S	X
ST-SB06 80-100	SA	L72871-05	S	X
ST-SB06 100-120	SA	L72871-06	S	X
ST-SB06 120-140	SA	L72871-07	S	X
ST-SB06 140-160	SA	L72871-08	S	X
ST-SB06 160-180	SA	L72871-09	S	X
ST-SB06 180-200	SA	L72871-10	S	X
ST-SB06 200-220	SA	L72871-11	S	X
ST-SB06 220-240	SA	L72871-12	S	X
ST-SB06 240-260	SA	L72871-13	S	X
ST-SB06 260-280	SA	L72871-14	S	X
ST-SB06 280-300	SA	L72871-15	S	X
ST-SB06 300-320	SA	L72871-16	S	X
ST-SB06 300-320 D	FD	L72871-17	S	X
ST-SB06 260-280 MSD[1]	SA	L72871-18	S	X^m

Matrix: S = Soil QC Type: SA = Sample FD = Field Duplicate

X^m – Matrix spike and/or matrix spike duplicate recovery.

[1] The sampler inadvertently listed the MS/MSD as a separate sample on the Chain of Custody, resulting in a field duplicate to sample ST-SB06 260-280.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperatures were 2.4°C and 4.1°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD ST-SB06 260-280 MSD (Total Antimony, Total Arsenic, Total Lead, Total Selenium, Total Thallium, Total Uranium) ST-SB06 0-20 (Total Barium, Total Beryllium, Total Cadmium, Total Chromium, Total Cobalt, Total Copper, Total Manganese, Total Mercury, Total Molybdenum, Total Nickel, Total Zinc) • LD ST-SB06 0-20 (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate ST-SB06 300-320 D ST-SB06 260-280 MSD • Field Blank N/A	Yes	The sampler inadvertently listed the MS/MSD on a separate line on the Chain of Custody. The laboratory logged in the MS/MSD as a separate sample, creating a field duplicate to sample ST-SB06 260-280. All field duplicate pairs met the applicable evaluation criteria. Data qualification was not required.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	

Review Parameter	Criteria Met?	Comments
Other Parameters	No	The laboratory noted that the associated interferent check sample lead recovery exceeded the control limits of 80-120%. As only a quality control data package was provided, raw data is not available to determine the presence of interferent elements in the samples. To be conservative, all sample lead results were qualified as estimated (N6), but are considered usable as qualified.

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
ST-SB06 260-280 MSD	Total Antimony	**50.4**/ **47.6** (75-125)	5.28 (20)	As the potential bias was considered to be low, the total antimony and total arsenic results for the associated parent sample were flagged with a M2.
	Total Arsenic	**65**/ **65.2** (75-125)	0.22 (20)	
ST-SB06 0-20	Total Molybdenum	**128.6**/ **71** (75-125)	**29.42** (20)	As the potential bias was considered to be indeterminate, the total molybdenum result for the associated parent sample was flagged with a M2 and M1. As the total molybdenum RPD was not within acceptance limits, the total molybdenum result was also flagged with an R8.

%R = Percent Recovery

M1 = Matrix spike recovery was high; the associated blank spike recovery was acceptable.

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

R8 = Sample RPD exceeded the method acceptance criteria.

RPD = Relative Percent Difference

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L73011 Sampling Event: August 1st, 4th, & 12th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 02/10/09

Peer Reviewer: Geoff Webb Date Completed: 02/10/09

This report summarizes the verification of analytical data for 4 soil samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses	
				Total Metals[1]	Hexavalent Chromium
EM-JS-02-1-3	SA	L73011-01	S	X	---
CS-JS-01-0-1	SA	L73011-02	S	---	X^m
CS-JS-02-10-11	SA	L73011-03	S	X^m	---
EM-JS-08-5-7	SA	L73011-04	S	---	X

Matrix: S = Soil QC Type: SA = Sample

X^m – Matrix spike and/or matrix spike duplicate recovery.

[1] Total metals analysis included total lead only.

Note: This report comprises the additional analyses of the samples discussed and evaluated in L70948.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

__X__ Data are usable without qualification.

____ Data are usable with qualification (noted below).

____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 3.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	Yes	All samples were analyzed within holding time requirements. Data qualification was not required.
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD CS-JS-01-0-1 (Hexavalent Chromium) CS-JS-02-10-11 (Total Lead) • LD EM-JS-02-1-3 (Total Lead)	Yes	The recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A	N/A	
• Internal Standards	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate N/A • Field Blank N/A	N/A	A field duplicate sample was not collected with this sampling event.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	
Other Parameters	Yes

SIERRITA
DATA REVIEW SUMMARY

Data Package Number: L73087

Sampling Event: September 18th, October 3rd, & October 6th, 2008

Sample-specific Parameter Review? **Yes** Laboratory Performance Parameters? **No**

Data Reviewer: Liz Kraak Date Completed: 02/10/09

Peer Reviewer: Geoff Webb Date Completed: 02/10/09

This report summarizes the verification of analytical data for 3 soil field duplicate samples. The soil samples were analyzed for total metals by methods M6020, M6010B, and M7471A. ACZ Laboratories, Inc. of Steamboat Springs, Colorado performed the analyses. ACZ operates under laboratory licensure number AZ0102.

The data review was conducted in accordance with the criteria specified in the Draft Addendum – Quality Assurance Project Plan Sierrita Mine Green Valley, Arizona (April 2008). Independent review flags were assigned as required by Appendix E in the QAPP. The table below summarizes the samples and analyses presented in these data packages.

Field ID	Sample Type	Lab ID	Matrix	Analyses
				Total Metals
ST-SB03 160-180 DUP	FD	L73087-01	S	X^m
ST-SB04 100-120 DUP	FD	L73087-02	S	X
ET-SB02 60-80 DUP	FD	L73087-03	S	X

Matrix: S = Soil QC Type: SA = Sample

X^m – Matrix spike and/or matrix spike duplicate recovery.

General Overall Assessment (Flags applied per ADEQ data qualifying process and QAPP guidance):

_____ Data are usable without qualification.

_X_ Data are usable with qualification (noted below).

_____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Summary: Except as noted below, any of the issues noted in the laboratory case narrative potentially affecting data quality are addressed in the appropriate sections in the table below. Results reported between the MDL and RL were flagged with a B by the laboratory. No additional qualifiers were added during data review for those results reported between the MDL and RL.

Review Parameter	Criteria Met?	Comments
Sample-specific Parameters	Complete with "Yes", "No", or "Not Applicable (N/A)".	For each "No" response, list what was out, associated acceptance limits, all qualified data, and bias direction or reference associated table with pertinent details.
COC & Sample Receipt	Yes	Samples were received intact and the cooler temperature was 2.5°C upon arrival at the laboratory, which met the criterion of ≤6°C. Qualification of data was not necessary. The percent solid is performed on the soil samples as received and this percent solid is reported on the result form. For the metals analysis, the soil samples are dried prior to sample preparation. Another percent solid is performed on the air dried sample to use as a correction factor for the sample result after analysis. This correction factor is also applied to the MDL and RL, but because the percent solid is performed on the air dried sample this correction factor is small. Therefore, the MDL and RLs are the same from sample to sample. The sample and results are reported on a dry weight basis. Samples were not air dried for the mercury analysis. The mercury samples were prepared as received and dry weight corrected.
Holding Times	No	With the exception of total mercury, all samples were analyzed within holding time requirements. The total mercury results for all samples were analyzed past the 28 day holding time limit. Therefore, all total mercury results for all samples were qualified as estimated (H1).
Method Blanks Calibration Blanks	Yes	Target analytes were not detected in the method blanks or continuing calibration blanks. Data qualification was not required.
Matrix QC • MS/MSD ST-SB03 160-180 DUP (Total Barium, Total Beryllium, Total Cadmium, Total Chromium, Total Cobalt, Total Copper, Total Manganese, Total Molybdenum, Total Nickel, Total Zinc) • LD ET-SB02 60-80 DUP (Percent Solids)	No	With the exceptions noted in Table 1 below, the recoveries and RPDs for the matrix spike (MS) and matrix spike duplicate (MSD) analyses were within the laboratory-determined acceptance range. Results in the native sample greater than four times the concentration of the spike added during digestions are not considered to be a representative measure of accuracy. Further action or qualification of data was not considered necessary. The agreement between parent sample results and the lab duplicate sample results was evaluated for percent solids. All of the results met the evaluation criteria.
Method QC • Serial Dilution N/A • Internal Standards	N/A	
	Yes	**Internal Standards** All internal standards were within the laboratory-determined acceptance limits. Data qualification was not required.
Field QC • Rinsate Blank N/A • Field Duplicate ST-SB03 160-180 DUP ST-SB04 100-120 DUP ET-SB02 60-80 DUP • Field Blank N/A	Yes	The field duplicate samples, ST-SB03 160-180 DUP, ST-SB04 100-120 DUP, and ET-SB02 60-80 DUP, are associated with samples collected in data packages L72397, L72397, and L72198, respectively. All field duplicate pairs met the applicable evaluation criteria. Data qualification was not required.
Laboratory Control Sample/ Laboratory Control Sample Duplicate (LCS/LCSD)	Yes	All LCS and LCSD percent recoveries and RPDs were within laboratory-determined acceptance limits. Data qualification was not required.
Elevated RLs without associated non-detect results	Yes	
Package Completeness	Yes	

Review Parameter	Criteria Met?	Comments
Other Parameters	Yes	

Table 1: MS/MSD Recovery Outliers and Resultant Qualification

Sample	Analyte	%Rs (Limits)	RPD (Limit)	Qualification
ST-SB03 160-180 DUP	Total Molybdenum	**43.6**/ **-6.5** (75-125)	**25.47** (20)	As the potential bias was considered to be low, the total molybdenum result for the associated parent sample was flagged with a M2. As the total molybdenum RPD was not within acceptance limits, the total molybdenum result was also flagged with an R8.
	Total Zinc	**73.5**/ **50.1** (75-125)	11.22 (20)	As the potential bias was considered to be low, the total zinc result for the associated parent sample was flagged with a M2.

%R = Percent Recovery

M2 = Matrix spike recovery was low; the associated blank spike recovery was acceptable.

R8 = Sample RPD exceeded the method acceptance criteria.

RPD = Relative Percent Difference

ATTN: Mr. Steven Vaughn

December 30, 2008

SUBJECT: FMI Gold & Copper-Sierrita, Data Validation

Dear Mr. Vaughn,

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on December 12, 2008. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project # 19954:

SDG #	Fraction
L70791, L71134, L72871	Metals

The data validation was performed under EPA Level IV guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998; IIIB, November 2004; Update IV, February 2007

Please feel free to contact us if you have any questions.

Sincerely,

Erlinda T. Rauto
Operations Manager/Senior Chemist

Introduction

This data review covers 24 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Manganese, Mercury, Molybdenum, Nickel, Selenium, Thallium, Uranium, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the methods stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section III.

Field duplicates are summarized in Section XIII.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met with the following exceptions:

Date	Lab. Reference/ID	Analyte	%R (Limits)	Associated Samples	Flag	A or P
8/14/08	CCV (21:54)	Selenium	111.6 (90-110)	CP-SD-07-1.5-3.0 CP-SD-10-1.5-3.0 CP-SD-09-1.5-3.0	J (all detects)	P

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Maximum Concentration	Associated Samples
PB (prep blank)	Antimony	0.25 mg/Kg	All samples in SDG L70791
ICB/CCB	Antimony Thallium	0.48 ug/L 0.12 ug/L	All samples in SDG L70791
ICB/CCB	Selenium	0.1 ug/L	CP-P12-0-1 CP-P12-1-3 CP-SD-08-0-1.5 CP-SD-08-1.5-3.0 CP-SD-10-0-1.5 CP-SD-09-0-1.5 OD-SD-01-0-1.5 OD-SD-01-1.5-3.0 OD-SD-02-0-1.5 OD-SD-02-1.5-3.0 OD-SD-04-0-1.5 OD-SD-04-1.5-3.0 OD-SD-03-0-1.5 OD-SD-03-1.5-3.0

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
CP-Q09-0-1	Antimony Thallium	0.3 mg/Kg 0.26 mg/Kg	0.3U mg/Kg 0.26U mg/Kg
CP-SD-07-0-1.5	Antimony Thallium	0.2 mg/Kg 0.27 mg/Kg	0.2U mg/Kg 0.27U mg/Kg
CP-SD-07-1.5-3.0	Antimony Thallium	0.2 mg/Kg 0.30 mg/Kg	0.2U mg/Kg 0.30U mg/Kg
CP-P12-0-1	Antimony Thallium	0.9 mg/Kg 0.26 mg/Kg	0.9U mg/Kg 0.26U mg/Kg
CP-P12-1-3	Antimony Selenium Thallium	0.3 mg/Kg 0.19 mg/Kg 0.18 mg/Kg	0.3U mg/Kg 0.19U mg/Kg 0.18U mg/Kg
CP-SD-08-0-1.5	Antimony Thallium	0.2 mg/Kg 0.25 mg/Kg	0.2U mg/Kg 0.25U mg/Kg
CP-SD-08-1.5-3.0	Selenium	0.09 mg/Kg	0.09U mg/Kg
CP-SD-10-0-1.5	Antimony Thallium	0.2 mg/Kg 0.25 mg/Kg	0.2U mg/Kg 0.25U mg/Kg
CP-SD-09-0-1.5	Antimony Thallium	0.3 mg/Kg 0.21 mg/Kg	0.3U mg/Kg 0.21U mg/Kg
CP-SD-09-1.5-3.0	Thallium	0.25 mg/Kg	0.25U mg/Kg
OD-SD-01-0-1.5	Antimony Selenium Thallium	0.3 mg/Kg 0.23 mg/Kg 0.29 mg/Kg	0.3U mg/Kg 0.23U mg/Kg 0.29U mg/Kg
OD-SD-01-1.5-3.0	Selenium Thallium	0.08 mg/Kg 0.28 mg/Kg	0.08U mg/Kg 0.28U mg/Kg
OD-SD-02-0-1.5	Antimony Thallium	0.2 mg/Kg 0.30 mg/Kg	0.2U mg/Kg 0.30U mg/Kg
OD-SD-02-1.5-3.0	Selenium	0.07 mg/Kg	0.07U mg/Kg

Sample	Analyte	Reported Concentration	Modified Final Concentration
OD-SD-04-0-1.5	Antimony Thallium	0.3 mg/Kg 0.30 mg/Kg	0.3U mg/Kg 0.30U mg/Kg
OD-SD-04-1.5-3.0	Selenium Thallium	0.19 mg/Kg 0.26 mg/Kg	0.19U mg/Kg 0.26U mg/Kg
OD-SD-03-0-1.5	Antimony Thallium	0.3 mg/Kg 0.28 mg/Kg	0.3U mg/Kg 0.28U mg/Kg
OD-SD-03-1.5-3.0	Selenium (10X) Thallium	0.4 mg/Kg 0.2 mg/Kg	0.4U mg/Kg 0.2U mg/Kg

No field blanks were identified in this SDG.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
CP-Q09-0-1MS/MSD (All samples in SDG L70791)	Antimony	40.2 (75-125)	40.8 (75-125)	-	J (all detects) UJ (all non-detects)	A
OD-SD-03-1.5-3.0MS/MSD (All samples in SDG L70791)	Barium Manganese	163.1 (75-125) 201.4 (75-125)	162.2 (75-125) 146.6 (75-125)	- -	J (all detects) J (all detects)	A

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Internal Standards

All internal standard percent recoveries (%R) were within QC limits with the following exceptions:

Sample	Internal Standard	%R (Limits)	Analyte	Flag	A or P
CP-Q09-0-1	Bismuth-209 (8/15/08) Bismuth-209 (8/14/08)	120.8 (30-120) 122.0 (30-120)	Thallium Lead Uranium	J (all detects) UJ (all non-detects)	A
OD-SD-01-1.5-3.0	Scandium-45	120.2 (30-120)	Arsenic	J (all detects) UJ (all non-detects)	A
OD-SD-02-0-1.5	Scandium-45	124.5 (30-120)	Arsenic	J (all detects) UJ (all non-detects)	A

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

All sample result verifications were acceptable.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

No field duplicates were identified in this SDG.

VALIDATION COMPLETENESS WORKSHEET
Level IV

Date: 12-23-08
Page: 1 of 1
Reviewer: MG
2nd Reviewer: ✓

METHOD: Metals (EPA SW 846 Method 6010B/6020/7000)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

	Validation Area		Comments
I.	Technical holding times	A	Sampling dates: 7-23-08 through 7-28-08
II.	Calibration	SW	
III.	Blanks	SW	
IV.	ICP Interference Check Sample (ICS) Analysis	A	
V.	Matrix Spike Analysis	SW	MS/MSD
VI.	Duplicate Sample Analysis	N	
VII.	Laboratory Control Samples (LCS)	A	LCS/LCSD
VIII.	Internal Standard (ICP-MS)	SW	
IX.	Furnace Atomic Absorption QC	N	not utilized
X.	ICP Serial Dilution	A	
XI.	Sample Result Verification	A	
XII.	Overall Assessment of Data	A	
XIII.	Field Duplicates	N	
XIV.	Field Blanks	N	

Note: A = Acceptable
N = Not provided/applicable
SW = See worksheet
ND = No compounds detected

VALIDATION FINDINGS CHECKLIST

Page: 1 of 2
Reviewer: MG
2nd Reviewer: ✓

Method: Metals (EPA SW 846 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?		✓		
Were all initial calibration correlation coefficients ≥ 0.995? (Level IV only)	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
V. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
VI. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VII. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients > 0.995?			✓	
Do all applicable analysies have duplicate injections? (Level IV only)			✓	
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%? (Level IV only)			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	

LDC #: 19954A4
SDG #: L70791

VALIDATION FINDINGS CHECKLIST

Reviewer: MG
2nd Reviewer: W

Validation Area	Yes	No	NA	Findings/Comments
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) < 10%?	✓			
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.		✓		
VIII. Internal Standards (EPA SW 846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?		✓		
If the %Rs were outside the criteria, was a reanalysis performed?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall Assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

Initial and Continuing Calibration Calculation Verification

Reviewer: MG
2nd Reviewer: [signature]

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$\%R = \frac{Found}{True} \times 100$ Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$ Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$\%D = \frac{|I-SDR|}{I} \times 100$ Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

	Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)

Introduction

This data review covers 21 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Manganese, Mercury, Molybdenum, Nickel, Selenium, Thallium, Uranium, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the methods stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section III.

Field duplicates are summarized in Section XIII.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Maximum Concentration	Associated Samples
ICB/CCB	Copper	11 ug/L	RP-JS-02-0-1 RP-JS-02-1-3 RP-JS-02-1-3D RP-JS-02-5-7 RP-JS-02-10-12 RP-JS-02-15-17 RP-JS-01-0-1 RP-JS-01-1-3 RP-JS-01-1-3D RP-JS-01-5-7 RP-JS-01-10-12 RP-JS-01-15-17 EM-JS-08-0-1 EM-JS-08-1-3 EM-JS-08-1-3D EM-JS-08-10-12
ICB/CCB	Lead	0.1 ug/L	EM-JS-08-5-7 EM-JS-08-10-12
ICB/CCB	Thallium	0.21 ug/L	All samples in SDG L71134

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
RP-JS-02-0-1	Thallium	0.25 mg/Kg	0.25U mg/Kg
RP-JS-02-1-3	Thallium	0.11 mg/Kg	0.11U mg/Kg
RP-JS-02-1-3D	Thallium	0.12 mg/Kg	0.12U mg/Kg
RP-JS-02-5-7	Thallium	0.17 mg/Kg	0.17U mg/Kg
RP-JS-02-10-12	Thallium	0.12 mg/Kg	0.12U mg/Kg
RP-JS-02-15-17	Thallium	0.15 mg/Kg	0.15U mg/Kg
RP-JS-01-0-1	Thallium	0.15 mg/Kg	0.15U mg/Kg
RP-JS-01-1-3	Thallium	0.13 mg/Kg	0.13U mg/Kg
RP-JS-01-1-3D	Thallium	0.14 mg/Kg	0.14U mg/Kg
RP-JS-01-5-7	Thallium	0.08 mg/Kg	0.08U mg/Kg
RP-JS-01-10-12	Thallium	0.09 mg/Kg	0.09U mg/Kg
RP-JS-01-15-17	Thallium	0.15 mg/Kg	0.15U mg/Kg
EM-JS-08-0-1	Thallium	0.12 mg/Kg	0.12U mg/Kg
EM-JS-08-1-3	Thallium	0.20 mg/Kg	0.20U mg/Kg
EM-JS-08-1-3D	Thallium	0.17 mg/Kg	0.17U mg/Kg
EM-JS-08-5-7	Thallium	0.22 mg/Kg	0.22U mg/Kg
EM-JS-08-10-12	Thallium	0.17 mg/Kg	0.17U mg/Kg

No field blanks were identified in this SDG.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
EM-JS-08-10-12MS/MSD (All samples in SDG L71134)	Antimony	57.2 (75-125)	62.8 (75-125)	-	J (all detects) UJ (all non-detects)	A
EM-JS-08-5-7MS/MSD (All samples in SDG L71134)	Chromium	-	126.5 (75-125)	-	J (all detects)	A

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

LCS ID	Analyte	LCS Concentration (Limits)	LCSD Concentration (Limits)	Associated Samples	Flag	A or P
LCS/LCSD	Arsenic	271.1 mg/Kg (181-270)	-	All samples in SDG L71134	J (all detects)	P

VIII. Internal Standards

All internal standard percent recoveries (%R) were within QC limits.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met with the following exceptions:

Diluted Sample	Analyte	%D (Limits)	Associated Samples	Flag	A or P
EM-JS-08-5-7L	Lead	16.4 (≤10)	All samples in SDG L71134	J (all detects)	A

XI. Sample Result Verification

All sample result verifications were acceptable.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

Samples RP-JS-02-1-3 and RP-JS-02-1-3D, samples RP-JS-01-1-3 and RP-JS-01-1-3D, and samples EM-JS-08-1-3 and EM-JS-08-1-3D were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

Compound	Concentration (mg/Kg)		RPD
	RP-JS-02-1-3	RP-JS-02-1-3D	
Arsenic	3.5	3.7	6

VALIDATION FINDINGS CHECKLIST

Reviewer: MG
2nd Reviewer: [illegible]

Method: Metals (EPA SW 846 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients > 0.995? (Level IV only)	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?		✓		
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients > 0.995?			✓	
Do all applicable analysies have duplicate injections? (Level IV only)			✓	
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%? (Level IV only)			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	

LDC #: 19954B4
SDG #: L71134

VALIDATION FINDINGS CHECKLIST

Reviewer: MG
2nd Reviewer: ✓

Validation Area	Yes	No	NA	Findings/Comments
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) < 10%?		✓		
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.		✓		
VIII. Internal Standards (EPA-SW 846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall Assessment of Data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field Duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
XIII. Field Blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

Samples with analyte concentrations within five times the associated ICB, CCB or PB concentration are listed above with the identifications from the Validation Completeness Worksheet. These sample results were qualified as not detected, "U".
Note : a - The listed analyte concentration is the highest ICB, CCB, or PB detected in the analysis of each element.

Initial and Continuing Calibration Calculation Verification

Reviewer: MG
2nd Reviewer:

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
0938 ICV	ICP (Initial calibration)	Be	2060	2000	103	103	Y

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$\%R = \frac{Found}{True} \times 100$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$\%D = \frac{|I-SDR|}{I} \times 100$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

	Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)

Introduction

This data review covers 22 soil samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Methods 6010B, 6020, and 7000 for Metals. The metals analyzed were Antimony, Arsenic, Barium, Beryllium, Cadmium, Chromium, Cobalt, Copper, Lead, Manganese, Mercury, Molybdenum, Nickel, Selenium, Thallium, Uranium, and Zinc.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review (October 2004) as there are no current guidelines for the methods stated above.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blanks are summarized in Section III.

Field duplicates are summarized in Section XIII.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Method Blank ID	Analyte	Maximum Concentration	Associated Samples
ICB/CCB	Thallium	0.18 ug/L	All samples in SDG L72871

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Sample	Analyte	Reported Concentration	Modified Final Concentration
ST-SB06 0-20	Thallium	0.27 mg/Kg	0.27U mg/Kg
ST-SB06 20-40	Thallium	0.14 mg/Kg	0.14U mg/Kg
ST-SB06 40-60	Thallium	0.21 mg/Kg	0.21U mg/Kg
ST-SB06 60-80	Thallium	0.16 mg/Kg	0.16U mg/Kg
ST-SB06 80-100	Thallium	0.14 mg/Kg	0.14U mg/Kg
ST-SB06 100-120	Thallium	0.14 mg/Kg	0.14U mg/Kg

Sample	Analyte	Reported Concentration	Modified Final Concentration
ST-SB06 120-140	Thallium	0.19 mg/Kg	0.19U mg/Kg
ST-SB06 140-160	Thallium	0.22 mg/Kg	0.22U mg/Kg
ST-SB06 160-180	Thallium	0.28 mg/Kg	0.28U mg/Kg
ST-SB06 180-200	Thallium	0.21 mg/Kg	0.21U mg/Kg
ST-SB06 200-220	Thallium	0.23 mg/Kg	0.23U mg/Kg
ST-SB06 220-240	Thallium	0.34 mg/Kg	0.34U mg/Kg
ST-SB06 240-260	Thallium	0.44 mg/Kg	0.44U mg/Kg
ST-SB06 260-280	Thallium	0.42 mg/Kg	0.42U mg/Kg
ST-SB06 300-320	Thallium	0.15 mg/Kg	0.15U mg/Kg
ST-SB06 300-320-D	Thallium	0.14 mg/Kg	0.14U mg/Kg
ST-SB06 260-280-MSD	Thallium	0.39 mg/Kg	0.39U mg/Kg

No field blanks were identified in this SDG.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met.

V. Matrix Spike Analysis

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
ST-SB06 260-280-MSDMS/MSDMSD (All samples in SDG L72871)	Antimony	50.4 (75-125)	47.6 (75-125)	-	J (all detects) UJ (all non-detects)	A
	Arsenic	65 (75-125)	65.2 (75-125)	-	J (all detects) UJ (all non-detects)	
ST-SB06 0-20MS/MSD (All samples in SDG L72871)	Barium	-	126.1 (75-125)	-	J (all detects)	A
ST-SB06 0-20MS/MSD (All samples in SDG L72871)	Molybdenum	128.6 (75-125)	71 (75-125)	29.42 (≤20)	J (all detects) UJ (all non-detects)	A

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Internal Standards

All internal standard percent recoveries (%R) were within QC limits.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized in this SDG.

X. ICP Serial Dilution

ICP serial dilution analysis was performed by the laboratory. The analysis criteria were met.

XI. Sample Result Verification

All sample result verifications were acceptable.

XII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIII. Field Duplicates

Samples ST-SB06 300-320 and ST-SB06 300-320-D were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

Compound	Concentration (mg/Kg)		RPD
	ST-SB06 300-320	ST-SB06 300-320-D	
Antimony	0.3	0.3	0
Arsenic	3.2	2.9	10
Barium	78.5	52.6	40
Beryllium	0.7	0.6	15
Chromium	9	9	0
Cobalt	5	6	18
Copper	223	223	0
Lead	9.16	9.05	1
Manganese	212	227	7
Molybdenum	12	11	9
Nickel	6	6	0
Selenium	0.26	0.22	17
Thallium	0.15	0.14	7
Uranium	1.08	1.04	4
Zinc	48	41	16

VALIDATION FINDINGS CHECKLIST

Reviewer: MG
2nd Reviewer: W

Method: Metals (EPA SW 846 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995? (Level IV only)	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
V. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.		✓		
VI. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VII. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients > 0.995?			✓	
Do all applicable analysies have duplicate injections? (Level IV only)			✓	
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%? (Level IV only)			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	

LDC #: 19954C4
SDG #: L72871

VALIDATION FINDINGS CHECKLIST

Reviewer: MG
2nd Reviewer: ✓

Validation Area	Yes	No	NA	Findings/Comments
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) < 10%?	✓			
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.		✓		
VIII. Internal Standards (EPA SW-846 Method 6020)				
Were all the percent recoveries (%R) within the 30-120% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall Assessment of Data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field Duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target analytes were detected in the field duplicates.	✓			
XIII. Field Blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

Initial and Continuing Calibration Calculation Verification

Reviewer: MG
2nd Reviewer: LA

METHOD: Trace Metals (EPA SW 846 Method 6010/6020/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
2248 4 ICV	ICP (Initial calibration)	Cr	1919.	2000.	96	96	Y
	GFAA (Initial calibration)						
1020 ICV	CVAA (Initial calibration)	Hg	10.87	10.0	108.7	108.7	
0016 CCV2	ICP (Continuing calibration)	Mo	998.	1002.	99.6	99.6	
	GFAA (Continuing calibration)						
1208 CCV3	CVAA (Continuing calibration)	Hg	10.23	10.0	102.3	102.3	
2135 ICV	ICP/MS (Initial calibration)	As	50.70	50.0	101.4	101.4	
2351 CCV2	ICP/MS (Continuing calibation)	Tl	49.02	50.0	98	98	

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

SDG #: LT2871

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MG
2nd Reviewer: [illegible]

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$\%R = \frac{Found}{True} \times 100$ Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$ Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$\%D = \frac{|I-SDR|}{I} \times 100$ Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

	Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
11-11	ICSAB	ICP Interference check	Zn	460. (mg/L)	500. (mg/L)	92	92	Y
11-11	2311 LCS	Laboratory control sample	Cd	263.1 (mg/kg)	258. (mg/kg)	102	not reported	
11-12	0031 21	Matrix spike	As	(SSR-SR) 16.3 (mg/kg)	25. (mg/kg)	65	65	
11-11	2325/2329 19/20	Duplicate	Mo	112.3 (mg/kg)	83.5 (mg/kg)	29.42	29.42	
11-11	2318/2322 1	ICP serial dilution	Cu	303. (mg/kg)	321. (mg/kg)	5.9	5.9	

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Have results been reported and calculated correctly?
(Y) N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
(Y) N N/A Are all detection limits below the CRDL?

Detected analyte results for #1, Cu were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$$\frac{(3.03\ mg/L)(0.050\ L)}{0.0005\ kg} = 303.$$

Sample ID	Analyte	Reported Concentration (mg/kg)	Calculated Concentration (mg/kg)	Acceptable (Y/N)
1	Sb	0.3	0.3	Y
	As	1.2	1.2	
	Ba	83.6	83.6	
	Be	0.3	0.3	
	Cr	5.	5.2	
	Co	5.	5.4	
	Cu	303.	303	
	Pb	2.45	2.45	
	Mn	187.	187.	
	Mo	48.	48.	
	Ni	3.	2.6	
	Se	0.55	0.55	
	Tl	0.27	0.28	
	U	4.64	4.64	
	Zn	28.	28.

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Have results been reported and calculated correctly?
(Y) N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
(Y) N N/A Are all detection limits below the CRDL?

Detected analyte results for # 18 U were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$$\frac{(5.031\ \mu g/L)(0.050L)(5)}{0.5\ g} = 2.516\ \mu g/g \text{ or } mg/kg$$

Sample ID	Analyte	Reported Concentration (mg/kg)	Calculated Concentration (mg/kg)	Acceptable (Y/N)
18	Sb	0.2	0.2	Y
	As	2.0	2.0
