Re: Voluntary Remediation Program – Soil and Sediment Characterization Report, Freeport-McMoRan Sierrita Inc., Green Valley, AZ VRP Site Code: 100073-03

Dear Ms. Taber:

As per Sierrita's Investigation Work Plan submitted on April 2008, enclosed are two copies of the revised Final Soil and Sediment Characterization Report prepared by URS Corporation for Sierrita. This revised report documents the work conducted by Sierrita to assess potential impacts to soil and sediment for constituents of interest associated with historical Sierrita operations.

This report has been revised to reflect a recent quality assurance review, as well as the responses from Sierrita to ADEQ on February 7, 2012 and accepted responses and comments from ADEQ to Sierrita on June 22, 2012. A detailed list of revisions prompted by ADEQ and Sierrita responses is provided below. For context, ADEQ's requests that required revision to the Soil and Sediment Characterization Report are repeated in italics, followed by Sierrita's responses or report revisions. Additionally, the general changes made by the quality assurance review is described follows this list.

Comment and Response Revisions

Comment No. 2. *Page I-I, Section 1,0 - "... submitted an application to enter into the VRP on June 16, 2007." Please note that our records and Sierrita's Work Plan state that the application was submitted on June 19, 2007.*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:
Sierrita acknowledges and revised Section 1.0 in the report stating that the application was submitted on June 19, 2007.

Comment No. 3. *Page I -I, Section 1.0 - Please note that the Addendum to Sampling & Analysis Plan (SAP) & Quality Assurance Project Plan (QAPP) Voluntary Remediation Program was not received by ADEQ until November 20, 2008.*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:
Sierrita acknowledges and revised Section 1.0 in the report stating that the Addendum was submitted on November 20, 2008.

Comment No.5*. Page 2-4 through 2-5, Section 2.5 - "Sample Analyses" -The VRP requests that analytical method numbers are provided within the text of this section.*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:

The analytical method numbers have been added to the text in Section 2.5 Sample Analyses of the Soil and Sediment Characterization Report.

Comment No.5a*. Since ACZ is certified by ADHS to analyze Uranium by EPA Method 200.8, please clarify as to why Sierrita chose to have Uranium analyzed by EPA Method 6020, a parameter that is not specifically covered by ACZ's EPA 6020 certification (see Table 1). (10/7/2001 Review of Final VRP Soil and Sediment Characterization Report) "The VRP concurs with this assessment and recommends the T2 data qualifier be utilized on the tables and data analysis reports for samples analyzed for uranium." (06/22/2012 Review of February 2, 2012 Response to Comments)*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:
Sierrita has utilized the T2 data qualifier where applicable in the revised Final Soil and Sediment Characterization Report.

Comment No.8*. Page 2-19 through 2-20, Section 2.11.3 - "Judgmental samples were also collected from boring EM-JS-01 at depth intervals of 0 to 1 and 1 to 3 fl bgs. This location was sampled based on previous soil sampling results (HGC 2008) where concentrations of arsenic, molybdenum, and antimony were detected above their respective nr-SRLs." "One judgmental soil boring (EM-JS-Ol) was added in the Former Esperanza Mill subarea based on field observation of surface soil staining."*
The VRP requests clarification as to why the sample location EM-JS-Ol was added.

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:
The soil boring log for EM-JS-01 has been revised to indicate visual surface soil staining.

The statement that EM-JS-01 was sited based on the HGC (2008) data will be deleted.

Considering the above revisions, the Soil and Sediment Characterization Report on page 2-21 (Section 2.11.3, 4th paragraph) was revised to read "Judgmental soil samples were also collected from boring EM-JS-01 at depth intervals of 0 to 1 and 1 to 3 ft bgs. Boring EM-JS-01 was added to the soil characterization program based on field observations of visual surface soil staining and discoloration."

Comment No.9*.. Page 2-20 , Section 2.11.4 .1 - "Ten random soil borings in the Former Esperanza Mill subarea were advanced to the underlying granodiorite bedrock." Please note that Section 2.11.3 states that nine random soil borings were utilized to characterize the Former Esperanza Mill. Please clarify and correct as appropriate*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:
The sentence in Section 2.11.4.1 (page 2-22) of the Soil and Sediment Characterization Report was revised to read "nine random and one judgmental soil borings were advanced to the underlying bedrock."

Comment No.13*. Page 2-34, Section 2.15.4.2 - "In addition, one composite soil sample was collected in 2005". The data related to the composite soil sample is not contained within the Report's table nor figures. Please provide clarification and correct as appropriate.*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:

After additional review and research, the sample in question was taken in 2001. Page 2-39, Section 2.15.4.2 has been revised to state "In addition, one composite soil sample ORP-0188 was collected in

2001." Table 2-9 of the Soil and Sediment Characterization Report was revised to include the data from the 2001 sample at the Rhenium Ponds.

***Comment No.14**. Page 3-1, Section 3.3 - "Field Duplicate Sample Evaluation"*

The VRP also noted that the Relative Percent Difference (RPD) calculated for each field duplicate was not properly evaluated. The Report text states "Results of the RPD calculations for sediment and judgmental soil samples are plotted in Figure 3-1 for each of the COI metals as well as an overall average RPD for each matrix. In general, the sediment (23.0%) and soil (23 .1%) had similar RPDs and are considered acceptable." Averaging RPDs together to determine a matrix specific RPD is not a suitable way to evaluate the precision and accuracy of field and laboratory activities. Preferably, the regular field sample should have been evaluated based upon the calculated RPD for each detected analyte and the acceptance criteria established either in the QAPP or regulatory guidance.

For example:

Sample pair OD-JS-03-01-03 and OD-JS-03-01 -03D

Acceptance Criteria

Per QAPP Table 7, a RPD limit was not specified for metals analysis, therefore the evaluation defaults to regulatory guidance.

For inorganics in soil:

- *±35% RPD for sample values greater than 5 times the Reporting Limit (RL); or*
- *the absolute value of the difference between the sample and duplicate should be less than the RL for sample values that are less than 5 times the RL.*

The VRP noticed that most of the field duplicates pairs were not properly evaluated during the data verification/validation process contained in Appendix C. One Appendix C report (L71473) states "The field duplicate pairs OD-JS-03-1-3/ OD-JS-03-1-3D .. ... .met the applicable evaluation criteria. Data qualification was not required." However, you can see from Table 4 that data qualification was/is required. Other field duplicate pairs either have a similar statement or were not evaluated at all.

The VRP requests that the field duplicate evaluation be re-performed according to the information provided here and applicable guidance documents. The data should then be modified to contain the data qualifiers.

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:

Figure 3-1 was deleted from the report. Table 3-1 was retained as a summary of the RPD calculation results. In addition, the summary RPD statistics at the bottom of Table 3-1 was also deleted.

Sierrita corrected the flagging deficiency noted by the ADEQ for arsenic and cobalt for sample pair OD-JS-03-01-03/ OD-JS-03-01-03D using the ADEQ's recommended RPD qualification criteria.

As indicated in the Review of February 2, 2012 response to Comments (Item 3), ADEQ requested Sierrita appropriately reference the use of 2008 NFGs. The use of the 2008 NFGs was referenced where applicable in the revised Soil and Sediment Characterization Report.

***Comment No.15**. Tables - Table 2-6: the arsenic value for EM-U25-05-05.5 is missing.*

Revised Final Soil and Sediment Characterization Report Revision & Sierrita Response:

Table 2-6 of the Soil and Sediment Characterization Report was revised to include the arsenic result (8.6 mg/kg) for sample EM-U25-05-05.5.

Quality Assurance Review

Further discussion of Data Quality Objectives (DQO) and evaluation of the DQOs were added in Section 1.2 and 4.4, respectively. These additions were to discuss the DQO process and the use of Arizona's Soil Remediation Level and Groundwater Protection Level standards as they applied to the subareas. A Data Quality Objectives Summary (Table 1-1) was added to discuss the DQO as it applied to Areas of Interest.

Subarea characterization figure references were added in Section 2.0.

Further discussion was added to sample designation (Section 2.4).

Additional clarification was added to the Work Plan Deviation discussion (Section 2.6). This included deviations to interval sampling within a boring location, approximation to boring locations through use of GPS, and naming convention inconsistencies. Additionally, references to these deviations were updated where mentioned throughout the report.

A more detailed discussion of chromium results in the soil samples was provided in the soil sample sections under the characterization results for each subarea to provide the rational for comparing total chromium results to the trivalent chromium nr-SRLs.

Additional references and clarification were provided in Section 2.15.3 of the Former Rhenium Ponds subarea providing additional information on the judgmental soil samples.

The Conclusions and Recommendations (Section 4.5) of the Soil and Sediment Characterization report were revised to reflect the changes made from the QA review and in response to ADEQs requests.

Sierrita is nearing completion of the Baseline Human Health Risk Assessment Work Plan as part of the VRP. This assessment focuses solely on potential impacts associated with exposure to constituents of potential concern detected in soil and sediment in specific exposure areas. Submittal of this report is anticipated within the next couple of weeks. Additionally, we continue to work towards completion of the groundwater investigation report that will include a refined conceptual site model and background conditions for uranium.

If additional information or clarification is required do not hesitate to contact me at (520) 393-2514 or Mr. Stuart Brown at (602) 448-0972.

Sincerely,

Clinton D. Beck, E.I.T.

VRP	Voluntary Remediation Program

1.0 INTRODUCTION

This report presents the site characterization results for soil and sediment at the Sierrita Mine located near Green Valley, Arizona (Figure 1-1). The investigation was conducted under the Arizona Voluntary Remediation Program (VRP) administered by the Arizona Department of Environmental Quality (ADEQ). Freeport-McMoRan Sierrita Inc. (Sierrita) submitted an application to enter into the VRP on June 19, 2007. The site was accepted into the VRP under Site Code 100073-03 on August 15, 2007. Sierrita retained URS Corporation (URS) to prepare and implement a Site Characterization Work Plan for the Sierrita Mine. The Voluntary Remediation Program (VRP) Investigation Work Plan (Work Plan) was submitted to ADEQ in April 2008 and an Addendum – Quality Assurance Project Plan (QAPP) was submitted to ADEQ on November 20, 2008. The Work Plan and Addendum were approved by ADEQ on November 26, 2008. The sites investigated and discussed in this report are associated with the Demetrie Wash Area; one of five major areas identified in the Work Plan to be characterized. Implementation of soil and sediment characterization commenced in June 2008 and was completed in November 2008. Groundwater characterization was also performed between July 2008 and July 2009. The groundwater characterization results will be submitted to the ADEQ in a subsequent site-wide groundwater characterization report.

1.1 Characterization Objectives and Scope

As described in the Work Plan, the goal of the VRP characterization was to evaluate:

- Facilities that ceased operation and/or were closed prior to implementation of Sierrita's Aquifer Protection Permit (APP) No. P-101679.
- Selected operations exempt from regulation under the APP.
- Operations identified as "to be closed" under the APP.
- Active operations with the potential to release mining-related constituents to groundwater.
- Potential uranium impacts to groundwater.

The focus of site characterization was to sample soil and sediment to assess potential releases of constituents of interest (COIs) from specified subareas. Initially, nine subareas were identified in the Work Plan for characterization (Figure 1-2). During performance of the site characterization outlined in the Work Plan, one additional historical operation, the Former Laydown Yard, was identified and characterized. Ten subareas were characterized:

- Former Copper Leach, Electrowinning and Regeneration (CLEAR) Plant
- Former Evaporation Pond
- Old D Pond
- Former Esperanza Mill
- Former C Pond and C Pond Spoils
- Former Raffinate Pond
- Former Laydown Yard
- Former E Pond
- Former Rhenium Ponds

The Sierrita and Esperanza Tailing Impoundments were the 10th subarea investigated. However, the results of tailing and tailing pore water sampling at are not discussed in this report, but will be submitted to the ADEQ in a subsequent site-wide groundwater characterization report. Tailing and tailing pore water were sampled during the 2008 field investigation to support site-wide groundwater characterization and will be used in the interpretation of the groundwater sampling results.

The COIs analyzed during the VRP characterization were selected based on a review of groundwater constituents currently monitored or regulated at Sierrita under its APP permit, historical groundwater quality data for the Sierrita Mine, and current and historical mining processes and operations. The soil and sediment COIs selected for analysis include mining-related total metals (antimony, arsenic, barium, beryllium, cadmium, calcium, chromium, cobalt, copper, lead, manganese, mercury, molybdenum, nickel, selenium, thallium, and zinc), total uranium, uranium isotopes (uranium-234, uranium-235, and uranium-238), and radium isotopes (radium-226 and radium-228). Many of these constituents also naturally occur in soils, rock, and groundwater at non-mineralized and mineralized mine sites.

1.2 Data Quality Objectives

The data quality objectives (DQOs) process applied for the Sierrita VRP is addressed in the QAPP. The DQO process is a systematic planning tool based on the Scientific Method for establishing criteria for data quality and for developing data collection designs.

This section provides the output from the DQO process applied for the surface and subsurface soil, and stream sediment at the eight subareas listed in Section 1.1. The specific sampling rationale for each subarea consisting of the problem statement, impacted media, objective of the investigation, and the proposed sampling approach to satisfy the objective are summarized in Table 1-1. DQOs were not previously established for the Former Laydown Yard, since the new subarea was discovered during the investigation fieldwork.

In satisfying the DQOs, the regulatory standards that are potentially relevant to this investigation are Arizona's Soil Remediation Levels (SRLs) and Groundwater Protection Levels (GPLs). The following paragraphs present a brief discussion of each action level.

- SRLs (residential and non-residential) were promulgated into rule in 1997 under the Arizona Administrative Code R18-7-201 and amended by final rulemaking effective May 5, 2007. They were originally derived from Arizona Health Based Guidance Levels that were formulated in 1990. Residential site-specific remediation level means a level of contaminants remaining in the soil after remediation that results in a cumulative excess lifetime cancer risk between 1×10^{-6} and 1×10^{-4} and a Hazard Index no greater than 1 based on residential exposure assumptions. Non-residential site-specific remediation levels means a level of contaminants remaining in soil after remediation that results in a cumulative excess lifetime cancer risk between 1×10^{-6} and 1×10^{-4} and a Hazard Index no greater than 1 based on non-residential exposure assumptions.
- The GPL is considered a screening method for determining COI levels in soil protective of groundwater and is considered a "worst case" correlation between total metals in the soil and the leachable fraction. The minimum GPLs are conservative, assuming that all of the "worst case" leachable metals reach groundwater regardless of depth.

1.3 Groundwater Characterization

Groundwater was also characterized during the VRP investigation. Groundwater characterization included the installation of 15 bedrock monitor wells and 14 temporary alluvium monitor wells. Groundwater at the existing and new monitor wells was sampled and analyzed for 4 quarters from July 2008 to July 2009. A separate site-wide groundwater characterization report will be subsequently submitted to the ADEQ. The site-wide groundwater characterization report will include characterization of the potential impacts to groundwater from active and historical operations, an evaluation of background conditions for uranium in groundwater, a refined conceptual site model, and tailing and tailing pore water data from the Esperanza and Sierrita Tailing Impoundment investigations.

1.4 Organization of the Report

This report is comprised of five sections, including this Introduction (Section 1). Section 2 discusses subarea history, describes field activities, presents analytical results for each subarea, and includes sample location maps and analytical data tables. Section 3 discusses and evaluates analytical quality assurance and quality control including data verification and data validation. Section 4 evaluates the soil and sediment characterization results for each subarea. Section 5 provides a list of references used to prepare this report. Soil boring logs, soil and sediment analytical data packages, and data verification and validation reports are provided in the following appendices:

- Appendix A Soil Boring Logs
- Appendix B Soil and Sediment Analytical Data Packages
- Appendix C Data Verification Reports
- Appendix D Level IV Data Validation Reports

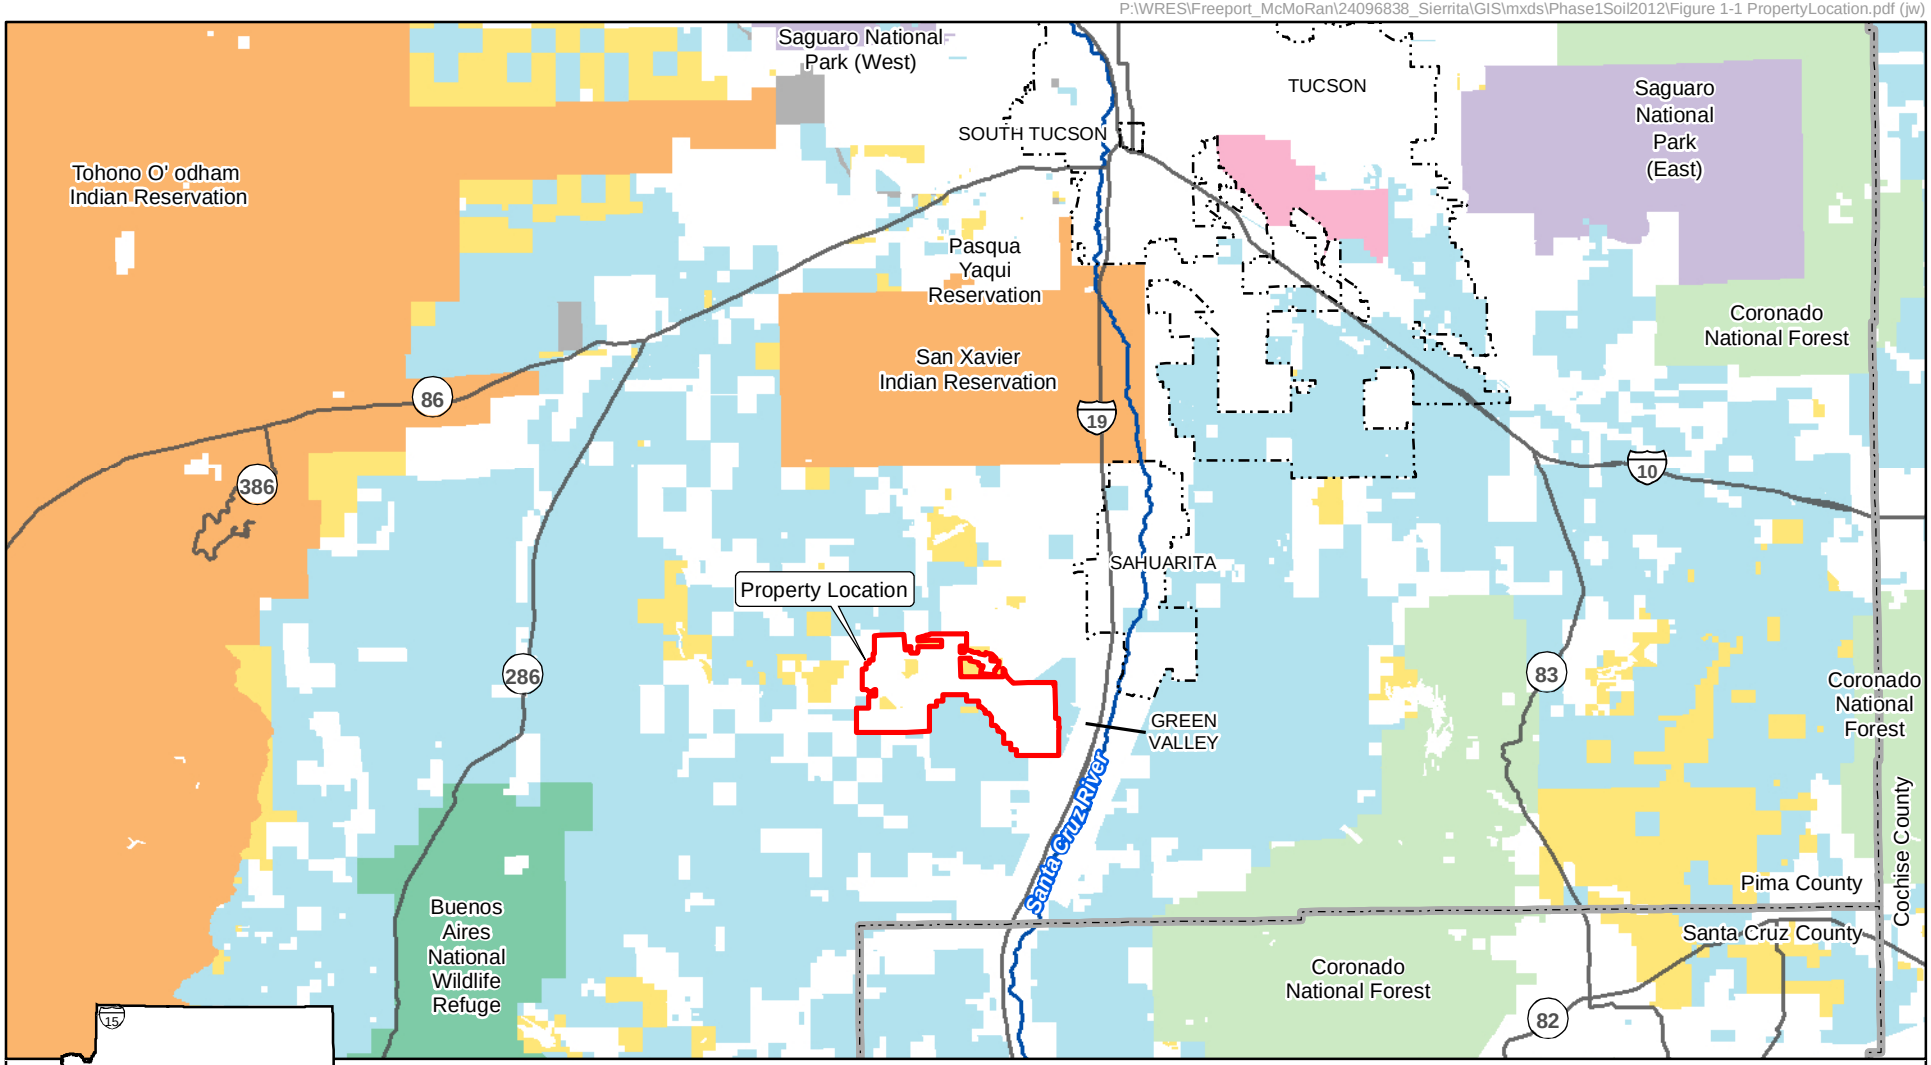

Table 1-1
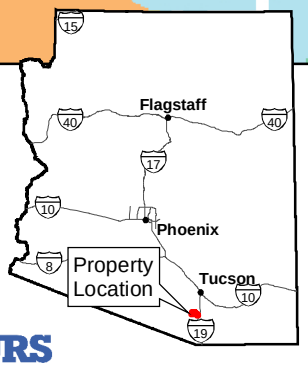
Data Quality Objectives Summary



Area of Interest	Problem Statement	Potentially Impacted Media	Objective	Proposed Sampling
Former CLEAR Plant	Former operations included process that used solutions containing COIs. Limited data exist to confirm that the CLEAR Plant has not adversely affected the environment.	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from CLEAR Plant to soil.	Establish a systematic grid with 200 foot centers over the entire plant area. Collect soil samples from the surface to bedrock at 10 random grid locations.
	Historical soil sampling identified several locations with elevated levels of antimony, arsenic, copper, and lead.	Surface and subsurface soil	Gather data to further delineate the areas having highest concentrations of COIs.	Collect soil samples from the surface to bedrock at 3 judgmental locations having the highest concentrations of COIs.
	No data exist to confirm that overflows and/or runoff from the facility have not impacted drainage channels and sediment.	Sediment	Confirm that releases of COIs from the CLEAR Plant have not occurred to sediment in drainage channels.	Collect sediment samples from 2 locations in each of the five drainage paths.
Former E Pond	Unlined impoundment reportedly collected surface runoff from CLEAR Plant. Samples have not been collected to confirm that the pond has not adversely impacted subsurface soils.	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from solutions to subsurface soil.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area.
Former Evaporation Pond	Process solutions were stored in this lined pond. Samples have not been collected to confirm that the pond has not adversely impacted subsurface soil.	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from process solutions to subsurface soils.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area.
Old D Pond	Process solutions were stored in this unlined pond. Samples have not been collected to confirm that the pond has not adversely impacted subsurface soil.	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from process solutions to subsurface soils.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area.
	No data exist to confirm that overflows and/or runoff from the facility have not impacted drainage channels and sediment.	Sediment	Confirm that releases of COIs from the Old D Pond have not occurred to sediment in drainage channels.	Collected sediment samples from 4 locations upgradient and 2 locations downgradient of the pond.

Table 1-1
Data Quality Objectives Summary

Area of Interest	Problem Statement	Potentially Impacted Media	Objective	Proposed Sampling
Former Esperanza Mill	Historic mill that separated copper using floatation process included mill, thickeners, and raw water pond. Historical soil sampling identified several locations with elevated levels of arsenic.	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former Esperanza Mill to soil.	Establish a systematic grid with 200-foot centers over the entire plant area. Collect soil samples from the surface to bedrock at 10 random grid locations.
Former C Pond	Historic unlined pond used to contain run-off from Sierrita Mill area. Limited data exist to confirm that the pond has not adversely impacted surface and subsurface soils.	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former C Pond to soil.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the pond area.
Former C Pond Spoils	Sediments dredged from Former C Pond were disposed to the ground surface immediately east of the Former C Pond. No data exist to confirm that the spoils have not adversely impacted surface and subsurface soils.	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former C Pond Spoils to soil.	Collect soil samples from the surface to bedrock at 4 judgmental locations drilled within the spoils area.
Former Raffinate Pond	Historical unlined pond used to hold raffinate solution potentially containing COIs. Limited data exist to confirm that the pond has not adversely impacted surface and subsurface soils.	Surface and subsurface Soil	Gather data to confirm that there has not been a release of COIs from Former Raffinate Pond to soil.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the pond area.
Rhenium Ponds	Historical lined pond used to hold rhenium process solutions. Limited data exist to confirm that the Rhenium Ponds have not adversely impacted surface and subsurface soils.	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Rhenium Ponds to soil.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the footprint of the former Rhenium Ponds.

2.0 SUBAREA CHARACTERIZATION

The following subsections present descriptions of the activities undertaken to characterize the nine subareas and presents their characterization results. The subareas are grouped geographically and by site activities in three general Sierrita site areas as illustrated on Figure 1-2 and consist of:

Former CLEAR Plant Area (Details are presented on Figure 2-1)

- Former CLEAR Plant
- Former E Pond
- Former Evaporation Pond
- Old D Pond (Not included on Figure 2-1 but shown on Figure 1-2)

Former Esperanza Mill Area (Details are presented on Figure 2-7)

- Former Esperanza Mill
- Former C Pond and C Pond Spoils
- Former Laydown Yard
- Former Raffinate Pond

Tailing Impoundment Area (Details are presented on Figure 1-2)

- Former Rhenium Ponds

Field work associated with the soil and sediment investigation at these subareas was performed between June and November 2008 and consisted of:

- Collection and analysis of 171 soil samples from 54 soil boring locations advanced to the bedrock surface
- Collection and analysis of 36 sediment samples from 18 locations

Note: Groundwater monitoring wells were installed and groundwater monitoring activities were performed during the investigation and the results will be presented in a separate site-wide groundwater characterization report to be submitted to ADEQ.

2.1 Previous Investigation

In 2004, Hydro Geo Chem Inc. (HGC 2008) conducted an investigation that included collecting surface samples from 0 to 0.25 feet below ground surface (ft bgs; 0 to 3 inches) and trench samples from depths ranging between 0 and 15 ft bgs. The HGC samples were collected in some of the same subareas that are the focus of this VRP investigation. Sampling data from the HGC investigation was used to supplement the VRP investigation where appropriate, with applicable total metals data presented in this VRP report. Soil samples collected by HGC in 2004 were initially screened in the field for paste pH, which was used to determine if the sample should be submitted for total metals analysis. Soil samples for laboratory analysis were selected based on their potential to accumulate metals or to potentially generate acid.

2.2 HGC Sample Designation

HGC's soil sample locations were identified by subarea (CLEAR Plant [CP] and Esperanza Mill [EM]) followed by sequential numbering. HGC's trench soil sample locations were also identified by subarea, followed by (Trench [T]) and then the sample depth interval. Examples of HGC's sample designations are described below:

- **HGC Surface Sample Designation** – The sample designation included two fields separated by dashes; consider the following example: CP-1.

  The first field (CP) identifies the CLEAR Plant and the subsequent numeric character (1) represents the first sequential sample.

- **HGC Surface Trench Sample Designation** – The sample designation included four fields separated by dashes; consider the following example: CP-T-1-1.5.

  The first field (CP) identifies the CLEAR Plant, the second field (T) identifies a trench sample, the third field (1) represents the top of the sample interval measured in ft bgs, and the fourth field (1.5) represents the bottom of the sample interval measured in ft bgs.

2.3 VRP Sample Collection

Soil and sediment sample borings were advanced using direct push techniques and Geoprobe® tooling. The Geoprobe® sampling method consisted of advancing the sample rods by hydraulically pushing or driving the rods to the desired sample collection depth. Soil samples were collected using disposable, non-reactive acetate liners placed within a Macro-core® sampling device. A limited number of samples were collected using a stainless steel hand auger in subareas that were inaccessible to the direct push rig.

Soil samples were generally composited as 1- or 2-foot sample intervals from ground surface to total boring depth. Soil samples were generally collected and composited as specified in the Work Plan (URS 2008). However, some composited soil depth intervals near the surface ranged from 0 to 1 and 1 to 3 ft. bgs instead of the 0 to 1.5 and 1.5 to 3 ft. bgs intervals specified in the Work Plan. All soil borings were advanced to refusal or the top of bedrock, whichever was encountered first. The depth to the top of bedrock was variable but was generally less than 10 ft. bgs, thereby preventing collection of soil samples in deeper intervals from 10 to 22 ft. bgs, as specified in the Work Plan.

2.4 VRP Sample Designation

Each soil and sediment sample collected during the 2008 VRP investigation was first identified by subarea. The following subarea designations were used:

- Former CLEAR Plant (CP)
- Former E Pond (E)
- Former Evaporation Pond (EV)
- Old D Pond (OD)
- Former Esperanza Mill (EM)
- Former C Pond (C)
- Former C-Pond Spoils (CS)
- Former Laydown Yard (EM) (**Note:** Samples in the Former Laydown Yard subarea were initially collected during the investigation of the Esperanza Mill subarea. Thus, the Former Laydown Yard subarea samples have the same sample designation (EM) as the Esperanza Mill)
- Former Raffinate Pond (RA)
- Former Rhenium Ponds (RP)

Each soil and sediment sample was further identified using an alphanumeric designation based on the type of sample collected. The following sample designations were used:

- **Grid Sample Designation** – Grid samples included soil samples collected at random grid nodes from a system of 200-foot-square grid units. The grid sample designation included four fields separated by dashes; consider the following example: CP-M04-0-1.

The first field (CP) identifies the CLEAR Plant and the second field (M04) is the grid node of the intersecting grid lines where the single-digit alpha and two digit numerical characters represents the vertical and horizontal grid lines, respectively. The third field (0) represents the top of the sample interval measured in ft. bgs and the fourth field (1) represents the bottom of the sample interval measured in ft. bgs.

- **Judgmental Sample Designation** – Judgmental samples included soil samples that were not located on grid nodes. The judgmental sample designation includes five fields separated by dashes; consider the following example: CP-JS-01-0-1.

  The first field (CP) identifies the CLEAR Plant, the second field (JS) identifies a judgmental sample, the third field (01) is a double-digit numeric character representing the sequential JS sample, the fourth field (0) represents the top of the sample interval measured in ft bgs, and the fifth field (1) represents the bottom of the sample interval measured in ft bgs.

- **Sediment Sample Designation** – Sediment samples included samples located in areas of probable sediment accumulation. The sediment sample designation includes five fields separated by dashes; consider the following example: CP-SD-01-0-1.5.

  The first field (CP) identifies the CLEAR Plant, the second field (SD) identifies a sediment sample, the third field (01) is a double-digit numeric character representing the sequential SD sample, the fourth field (0) represents the top of the sample interval measured in ft bgs, and the fifth field (1.5) represents the bottom of the sample interval measured in ft bgs.

The last two fields describing the top and bottom sampled intervals in all three sample designations were slightly different from the naming convention in the Work Plan. The leading zeros required in the Work Plan were omitted by the sampler when filling out the laboratory chain-of-custody forms (e.g., sample collected at surface and one foot interval was labeled as "0-1" instead of "00-01").

2.5 Sample Analyses

Soil and sediment samples were submitted to ACZ Laboratories in Steamboat Springs, Colorado for total metals analysis including antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, manganese, mercury, molybdenum, nickel, selenium, thallium, uranium and zinc. The total metals were prepared for analysis using U. S. Environmental Protection Agency (USEPA) Method 3050 and analyzed using USEPA Method 6020 (inductively coupled plasma-

mass spectrometry [ICP-MS]) for antimony, arsenic, lead, selenium, thallium, and uranium, and Method 6010 (inductively coupled plasma-atomic emission spectrometry [ICP-AES]) for barium, beryllium, cadmium, chromium, cobalt, copper, manganese, molybdenum, nickel, and zinc. **Note:** Because uranium is not a target compound of USEPA Method 6020, the results were qualified with at "T2" qualifier. A "T2" qualified indicates that the cited Arizona Department of Health Services licensed method does not contain this analyte as part of the method compound list. Total mercury was analyzed using USEPA Method 7471A (cold vapor atomic absorption).

During the 2008 VRP investigation, selected soil samples with total lead results greater than the GPL of 290 milligrams per kilograms (mg/kg) were also analyzed for lead using USEPA Method 1312 (the synthetic precipitation leaching procedure [SPLP]) and Method 6020 (ICP-MS). In addition, selected soil samples that exceeded the residential (r)-SRL for hexavalent chromium of 30 mg/kg were also analyzed for hexavalent chromium using USEPA Methods 3060A and 7196A (colorimetric).

Soil samples were also submitted to Paragon Analytics Inc. (PAI) in Fort Collins, Colorado for analysis of isotopic uranium (uranium-234, uranium-235, and uranium-238) and isotopic radium (radium-226 and radium-228). Isotopic uranium was analyzed using alpha spectroscopy using American Society for Testing and Materials (ASTM) Method D3972. Radium-226 was analyzed using USEPA Method 903.1 (radon emanation). Radium-228 was analyzed by gas flow proportional counting (USEPA Method 9320/904.0M) and gamma spectroscopy (USEPA Method 901.1M). Soil sample results for isotopic uranium and radium will be submitted to the ADEQ in a subsequent site-wide groundwater characterization report. Isotopic uranium and isotopic radium activities in soil samples were analyzed to support site-wide groundwater characterization and will be used in the interpretation of the groundwater sampling results.

2.6 Work Plan Deviations

Six deviations from the Work Plan were made in response to actual conditions encountered in the field, as well as some minor sample recording errors. The Work Plan deviations included:

- During the 2008 VRP investigation, all soil borings were advanced to refusal or bedrock, whichever came first. A target maximum boring depth of 22 ft bgs was proposed in the Work Plan (URS 2008). Because bedrock was frequently encountered at depths less than the target maximum boring depth of 22 ft bgs, most soil borings were advanced to less than 10 ft bgs. The deepest soil boring was advanced to a depth

of 20 ft bgs. **Note:** At each location a minimum of three attempts were made to reach the target maximum depth.

- Because most soil borings were advanced to shallower depths than what was proposed in the Work Plan, the total number of samples collected was less than the total number proposed in the Work Plan. Considering the maximum boring depth of 22 ft bgs proposed in the Work Plan (URS 2008), six sampling intervals per boring were specified. Typically, three or less soil samples were collected at each boring location because the depth to bedrock was less than anticipated in the Work Plan. Six soil samples (excluding duplicates) were only collected at one soil boring (CP-JS-04) during the investigation.
- Investigation of a new subarea found during implementation of field activities designated as the Former Laydown Yard, where 16 soil samples were collected and submitted for laboratory analysis.
- At some boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs, instead of 0 to 1.5 and 1.5 to 3 ft bgs, intervals specified in the Work Plan.
- The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan. The leading zeros required in the Work Plan were omitted by the sampler when filling out the laboratory chain-of-custody forms (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").
- The global positioning system (GPS) locations for borings CP-N08, CP-JS-02, and EV-JS-02 are noted as approximate in the boring logs, because the location stake was missing at the time of the survey. The sample locations were reestablished by memory using aerial photos and then resurveyed using GPS.

In addition to the six deviations noted above, additional laboratory analyses not prescribed in the Work Plan were completed for selected soil samples, as follow:

- Samples CS-JS-02-10-11, C-JS-05-0-1, C-JS-05-1-3, RA-JS-02-1-3, EM-JS-02-1-3, EM-JS-08-5-7, and EM-JS-08-10-12 were analyzed for SPLP lead using USEPA Methods 1312 and 6020.
- Samples CS-JS-01-0-1, RA-JS-02-5-7, RA-JS-02-5-7D, EM-JS-07-10-12, EM-JS-07-15-16, EM-JS-08-5-7, and EM-JS-08-10-12 were analyzed for hexavalent chromium using USEPA Methods 3060A and 7196A.

2.7 Former CLEAR Plant Subarea

The CLEAR Plant was historically located in the north-central portion of the Sierrita property (Figures 1-2 and 2-1). The Former CLEAR Plant subarea comprises approximately 60 acres. The Former Evaporation Pond and Former E Pond subareas are located within the Former CLEAR Plant subarea as illustrated in Figure 2-1. The Former CLEAR Plant is not an APP-regulated facility.

2.7.1 Subarea Description

From 1977 to 1983, the Former CLEAR Plant produced metallic copper. Copper was initially leached from copper concentrate slurry which was produced from sodium and potassium chloride brines and sodium hydroxide and ferric chloride reagents. This leach solution was processed through two mixing reactors and a thickener before a slurry of cement copper was added to the leach solution to produce a pregnant solution. The pregnant solution was then circulated in electrolytic tanks containing anode and cathode arrays. The resulting precipitated copper was filtered, washed, dried, and stored until sold. (HGC, 2008) The Former CLEAR Plant was demolished in 1995. The process equipment and a majority of the interior contents of the building were dismantled and salvaged.

Information regarding the Former CLEAR Plant was obtained through interviews with current and former employees. Information obtained during the interviews indicates that the plant was commissioned in 1975. A number of impoundments were associated with the plant, including the Former Evaporation Pond, the Old D Pond, and the Former E Pond (formerly misidentified in the Aquifer Protection Permit [APP] as the Old D Pond). A number of aboveground process tanks and ponds that were associated with the former operations were identified from historical aerial photographs. No traces of the aboveground process tanks are currently evident. Figure 2-1 illustrates historical features including former impoundments and tanks that were identified on the historical aerial photographs.

The topography of the Former CLEAR Plant area generally slopes eastward and is incised by east-west trending drainages. The western portion of the area is cut into bedrock. Fill ranging from a few inches to approximately 25 feet in thickness is present in the remaining area. In the western portion of the property where fill is thin or non-existent, bedrock is at or near the surface, and outcrops of granodiorite are visible. The easternmost portion of the area, located along Demetrie Wash, is undisturbed and is sparsely covered with native vegetation. A large part of the Former CLEAR Plant subarea is covered with gravel or crushed rock. Buried concrete

slabs are known, through interviews with current and former employees, to exist under the current layer of gravel.

Currently, the Former CLEAR Plant subarea is used as 1) an asset recovery yard to store used equipment, machinery, and vehicles, 2) contractor offices and materials storage, 3) a metal fabrication shop, and 4) Sierrita's "Central Accumulation" building, currently used to store environmental sampling supplies and manage hazardous waste. The Former CLEAR Plant building is currently used for storage of miscellaneous materials such as used computers and office equipment and as a training center. The Crystal Plant is located in the southernmost building, which manufactures copper sulfate pentahydrate, a product that may be sold as fertilizer, pesticide, foot bath, and animal feed.

2.7.2 2004 HGC Investigation

The following soil samples were collected during HGC's 2004 investigation at the Former CLEAR Plant:

- 12 surface soil samples at 12 locations (designated as "CP")
- 24 subsurface soil samples at 8 trench locations (designated as "CP-T")

2.7.3 2008 VRP Investigation

URS collected the following soil samples to further characterize the Former CLEAR Plant subarea:

- 27 soil samples from soil borings at 10 grid sample locations
- 15 soil samples from soil borings at 4 judgmental (JS) sample locations
- 20 sediment samples from borings at 10 sediment (SD) sample locations

Refer to Figure 2-1 for the locations of the soil and sediment samples. Refer to Table 2-1 for sample designations, sampling depth intervals, and analytical results.

Grid soil samples were collected from randomly selected nodes on a 200-foot grid applied to the roughly 59 acres that comprise the Former CLEAR Plant subarea. Twenty-seven soil samples were collected from the 10 randomly selected grid nodes (CP-M06, CP-O03, CP-P04, CP-P05, CP-P12, CP-Q09, CP-M04, CP-P07, CP-N08, and CP-O09). The sample depth intervals ranged between 0 to 17 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-1. **Note:** During the time that boring locations were surveyed, the marking stake at CP-N08 was missing. The location was reestablished by memory utilizing aerial photos and then surveyed

using GPS technology. Therefore, the GPS coordinates are estimated, and a qualifier has been placed on the boring log notifying as such.

Judgmental samples were collected from soil borings at four locations. Three judgmental sample locations were identified in the Work Plan (URS 2008) based on previous sampling results (HGC 2008), and are locations where concentrations of arsenic and/or lead were detected above their respective nr-SRL. One additional judgmental sample location (CP-JS-04) was identified based on field observations. Sample location CP-JS-04 was drilled in a fill area that had not been previously sampled to the total depth of the fill. A total of 15 soil samples were collected from the four judgmental sample locations (CP-JS-01, CP-JS-02, CP-JS-03, and CP-JS-04). The sample depth intervals ranged between 0 to 20 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-1. **Note:** During the time that boring locations were surveyed, the marking stake at CP-JS-02 was missing. The location was reestablished by memory utilizing aerial photos and then surveyed using GPS technology. Therefore, the GPS coordinates are estimated, and a qualifier has been placed on the boring log notifying as such.

Twenty sediment samples were collected from 10 borings to evaluate the five shallow surface drainages that originate within the Former CLEAR Plant subarea. Four drainages flow eastward to Demetrie Wash and one drainage flows south toward the Old D Pond. Two sediment sample locations were established for each of the 5 drainages to evaluate potential sediment impacts, as described in the Work Plan. Ten borings (CP-SD-01, CP-SD-02, CP-SD-03, CP-SD-04, CP-SD-05, CP-SD-06, CP-SD-07, CP-SD-08, CP-SD-09, and CP-SD-10) were advanced to 3 ft bgs. The sample depth intervals ranged between 0 to 3 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-1.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field as follows:

1. The Work Plan proposed collecting 60 soil samples from 10 grid sample locations; however only 27 samples were collected from 10 grid sample locations because the depth to bedrock was less than anticipated in the Work Plan.
2. The Work Plan proposed collecting 18 soil samples from three judgmental sample locations; however only 15 soil samples were collected from four judgmental sample locations (CP-JS-01, CP-JS-02, CP-JS-03, and CP-JS-04) because the depth to bedrock was less than anticipated in the Work Plan.

3. One judgmental sample location (CP-JS-04) was added based on field observations. The additional sample location was added to delineate an area where fill had been placed and samples had not previously been collected at depth.

4. At some boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs, instead of 0 to 1.5 and 1.5 to 3 ft bgs, intervals specified in the Work Plan.

5. At soil boring location CP-M04 the upper soil sample was erroneously collected at 0 to 2.5 ft bgs instead of 0 to 1.5 ft bgs as specified in the Work Plan.

6. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

7. The GPS boring locations for borings CP-N08 and CP-JS-02 are noted as approximate in the boring logs, because the location stake was missing at the time of the survey. The sample locations were reestablished by memory using aerial photos and then resurveyed using GPS.

2.7.4 Characterization Results

The following discussion is based on results of the 2004 HGC investigation (HGC 2008) and the 2008 VRP investigation. Analytical results are presented on Table 2-1 and summarized on Figure 2-2. Figure 2-2 only shows sample results for borings with COI concentrations greater than the non-residential soil remediation levels (nr-SRLs) or groundwater protection levels (GPLs). Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.7.4.1 Physical Characteristics

Twenty-four soil borings in the Former CLEAR Plant subarea were advanced to the underlying granodiorite bedrock. Bedrock was encountered between 3 and 20 ft bgs with deepest bedrock occurrence to the northeast. The soils overlying bedrock generally consisted of loose silty sands with layers of cobble sized fill material.

2.7.4.2 Soil Samples

Seventy-eight soil samples were collected from 34 locations within the Former CLEAR Plant subarea during the 2004 and 2008 investigations. The most commonly detected COIs exceeding their respective nr-SRLs are arsenic and copper. In some limited samples, lead was detected

exceeding nr-SRLs and GPL and antimony was detected exceeding GPLs. In addition, chromium was also detected in some samples at concentrations that exceeded the r-SRL for hexavalent chromium. A summary of the arsenic, copper, lead, and antimony results that exceed the nr-SRLs or GPLs are shown on Figure 2-2.

Arsenic was detected in all soil samples collected. Arsenic concentrations range from 1.0 to 166 mg/kg. Arsenic was detected at concentrations above the nr-SRL (10 mg/kg) in 22 soil samples collected from 17 sample locations. Thirteen of the samples exceeding the nr-SRL were collected from 0 to 3 ft bgs. The deepest sample collected containing arsenic at concentrations exceeding the nr-SRL was from 14 ft bgs. Arsenic concentrations did not exceed the GPL (290 mg/kg) in any of the samples analyzed.

Copper was detected in all soil samples collected at concentrations ranging from 142 to 109,000 mg/kg. Four samples exceeded the nr-SRL (41,000 mg/kg). These four samples were all collected during the 2004 HGC investigation. Three of the samples were collected at a depth interval of 0 to 0.25 ft bgs (0 to 3 inches bgs); the other soil sample was collected from a depth of 1.5 ft bgs. None of the copper concentrations in soils collected during the 2008 VRP investigation exceeded the nr-SRL. A GPL for copper has not been established.

Lead was detected in all soil samples at concentrations ranging from 1.2 to 1,820 mg/kg. Five samples contained lead at concentrations exceeding the GPL (290 mg/kg). Two of the five samples had concentrations above the nr-SRL (800 mg/kg). These five samples were collected during the 2004 HGC investigation. None of the lead concentrations in soils collected during the 2008 VRP investigation exceeded the nr-SRL or GPL.

Antimony was detected in two soil samples from 0 to 0.25 ft bgs at concentrations above the GPL (35 mg/kg). Neither of these concentrations exceeded the nr-SRL for antimony (410 mg/kg). These two samples were collected during the 2004 HGC investigation. None of the antimony concentrations in soils collected during the 2008 VRP investigation exceeded the GPL or nr-SRL.

Chromium was detected in majority of the soil samples. Four samples contained chromium at concentrations ranging from 35 to 470 mg/kg exceeding the r-SRL screen for hexavalent chromium (30 mg/kg). These four samples were collected during the 2004 HGC investigation in which the chromium concentrations were significantly less than the r-SRL and nr-SRL for total chromium established at that time of 2,100 and 4,500 mg/kg, respectively. Therefore, none of these samples were analyzed for hexavalent chromium. However, when examining other subareas where hexavalent chromium analysis was performed on selected soil samples with total

chromium ranging from 33 to 193 mg/kg (See Sections 2.13.4.2 and 2.14.4.2); hexavalent chromium was not detected in these samples above reporting limits. Therefore, considering that hexavalent chromium has not been used at the Sierrita site and is not likely to be stable in the geochemical environment of the surface and shallow subsurface soils, it is assumed that trivalent chromium is the most likely form of chromium present at the site. Given these considerations, the soil chromium results were compared to the trivalent chromium nr-SRL (1,000,000 mg/kg) in this report. None of the reported chromium concentrations in all collected soils samples exceeded the nr-SRL for trivalent chromium. Additionally, none of the reported chromium concentrations exceeded the GPL (590 mg/kg).

Barium, beryllium, cobalt, manganese, molybdenum, nickel, selenium, thallium, uranium, and zinc were detected in most of the soil samples, but the detected concentrations were less than their respective nr-SRL or GPL. Cadmium and mercury were generally not detected above their reporting limits in most of the soil samples.

2.7.4.3 Sediment Samples

Twenty sediment samples were collected from 10 borings along the five shallow surface drainages that originate from the Former CLEAR Plant subarea (Figure 2-1). COIs were not detected at concentrations at or above the nr-SRLs or GPLs in the sediment samples.

2.7.5 Former CLEAR Plant Subarea Summary

Arsenic, lead, copper, and antimony in some of the soil samples collected in the Former Clear Plant subarea were detected at concentrations above nr-SRLs and/or GPLs. The analytical results from the 2004 HGC investigation and the additional samples collected during the 2008 VRP investigation indicate that metals present at concentrations exceeding the nr-SRLs and/or GPLs occur primarily in the following four locations within the footprint of the Former CLEAR Plant subarea (Figure 2-2):

1. An area in the northwestern corner of the Former CLEAR Plant subarea, characterized by soil sample locations designated CP-5 and CP-T-1. Sample CP-5 was collected from the top 3 inches of soil and contained arsenic at a concentration exceeding the nr-SRL. Deeper soil samples collected from nearby trench CP-T-1 contained arsenic at concentrations exceeding the nr-SRL, to a depth of 4 ft bgs. The deepest sample, collected from 8 ft bgs, did not contain metals at concentrations exceeding their nr-SRLs. Arsenic is the only metal present in this area at a concentration exceeding the nr-SRL. Arsenic concentrations in this area did not exceed the GPL.

2. An area located north of the main access road into the Former CLEAR Plant subarea, and extending eastward to the edge of the extensively graded and leveled area. This area is characterized by sample locations designated CP-9, CP-7, CP-M04, CP-T-2, CP-T-2B, CP-T-2C, CP-1, and CP-JS-01. Analysis of samples collected from these locations detected arsenic and copper at concentrations exceeding the nr-SRLs in four of eight samples collected in the upper 1 foot of soil. Deeper soil samples collected from locations CP-T-2 and CP-JS-01 (on the east side of the area) contained arsenic exceeding the nr-SRL to a depth of 7 and 12 ft bgs, respectively. Arsenic concentrations ranged from 1.5 to 105 mg/kg with concentrations in 10 samples exceeding the nr-SRL. Arsenic concentrations in this area did not exceed the GPLs. Copper concentrations ranged from 506 to 59,300 mg/kg with concentrations in two samples exceeding the nr-SRL. There is no established GPL for copper. Lead and antimony were detected at concentrations exceeding the GPL at sample location CP-1, where arsenic and copper were also detected above the nr-SRL. No other metals were present at concentrations exceeding the nr-SRLs and/or GPLs.

3. The center of the Former CLEAR Plant subarea, which is now designated as the Asset Recovery yard. This area is characterized by sample locations designated CP-16, CP-15, CP-T-3, and CP-T-4. Lead was detected in two samples at concentrations above the GPL (290 mg/Kg) (one from the upper 0.25 feet (3 inches) and one from 8 ft bgs). Arsenic concentrations in the area ranged from 1.1 to 34.9 mg/kg, with concentrations in six samples exceeding the nr-SRL. Copper concentrations in this area ranged from 978 to 109,000 mg/kg, with concentrations in two surface soil samples exceeding the nr-SRL. No other COIs were present at concentrations exceeding their respective nr-SRL.

4. The area located near the southern end of the Former CLEAR Plant subarea immediately north of the Former E Pond. This area is characterized by sample locations designated CP-2 and CP-3. Arsenic and lead were detected at concentrations exceeding the nr-SRL in samples taken from the upper 0.25 feet (3 inches) of soil. No other metals were present at concentrations exceeding the nr-SRL. Lead and antimony were detected at concentrations exceeding the GPLs at sample location CP-2. Deeper samples collected immediately adjacent to this area (CP-O09 and CP-JS-03) did not contain COIs at concentrations greater than the nr-SRLs or GPLs.

In addition to these four specific areas, one anomalous soil sample was identified at sample location CP-N08 where arsenic was detected at a concentration of 41.9 mg/kg at the depth interval from 10 to 11 ft bgs exceeding the nr-SRL, but below the GPL. The three samples

collected from soils overlying this sample contained arsenic at concentrations (4.1 to 7.7 mg/kg) less than the nr-SRL and GPL.

2.8 Former E Pond Subarea

The Former E Pond subarea is located in the north-central portion of the Sierrita property within the southern portion of the Former CLEAR Plant subarea (Figures 1-2 and 2-3). The Former E Pond was associated with the CLEAR Plant process. The Former E Pond is an APP-regulated subarea that is misidentified in the APP as the Old D Pond.

2.8.1 Subarea Description

The Former E Pond is an inactive, backfilled pond. This pond was historically used to contain surface water runoff and possibly process solutions from upset conditions at the Former CLEAR Plant.

The topography of the Former E Pond slopes to the south and east. Most of the area has been disturbed by grading, and slopes to the south with little of the natural topography remaining. Outcrops of granodiorite are visible across the area. The area is sparsely covered with native vegetation.

2.8.2 2008 VRP Investigation

In July and August 2008, URS collected the following soil samples to characterize the Former E Pond:

- 5 soil samples from soil borings at 2 judgmental (JS) sample locations

Refer to Figure 2-3 for the locations of the soil samples. Refer to Table 2-2 for sample designations, sampling depth intervals, and analytical results.

Five judgmental samples were collected from two soil borings (E-JS-01 and E-JS-02) advanced through the footprint of the former impoundment. The sample depth intervals ranged from 0 to 1 to 5 to 7 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-2. The deepest sample collected was from 7 ft bgs at sample location E-JS-01.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The Work Plan proposed collecting 12 soil samples from two judgmental sample locations; however, only five soil samples were collected from two judgmental sample locations because the depth to bedrock was less than anticipated in the Work Plan.

2. At some boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.

3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

2.8.3 Characterization Results

The following discussion is based on results from the 2008 VRP investigation. Analytical results are presented on Table 2-2. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.8.3.1 Physical Characteristics

Two soil borings within the footprint of the Former E Pond were advanced to granodiorite bedrock. Bedrock was encountered between 3 and 7 ft bgs. The bedrock was shallower to the east of the Former E Pond. The overlying soils generally consisted of loose silty sands with layers of cobble-sized fill material.

2.8.3.2 Soil Samples

Five soil samples were collected from two judgmental locations within the footprint of the Former E Pond. No COIs were detected at concentrations that exceeded their nr-SRLs or GPLs.

2.8.4 Former E Pond Subarea Summary

No COIs were detected above the nr-SRLs or GPLs in the soil samples collected from boring locations (E-JS-01 and E-JS-02) in the Former E Pond subarea.

2.9 Former Evaporation Pond Subarea

The Former Evaporation Pond subarea is located in the north-central portion of the Sierrita property south of the Former CLEAR Plant (Figures 1-2 and 2-4). The Former Evaporation Pond was a lined impoundment that received spent copper solution containing elevated chloride concentrations. The Former Evaporation Pond is not an APP-regulated facility.

2.9.1 Subarea Description

The Former Evaporation Pond subarea is an inactive pond. The Former Evaporation Pond is located immediately north of the New D Pond, which is a currently operating facility regulated under the APP.

The current topography of the Former Evaporation Pond area slopes to the south and east. Most of the area has been disturbed by grading to create the New D Pond and to direct surface runoff into the New D Pond. Outcrops of granodiorite are visible across the area. The area is sparsely covered with native vegetation.

2.9.2 2008 VRP Investigation

URS collected the following samples to characterize the Former Evaporation Pond:

- 6 soil samples from soil borings at 2 judgmental (JS) sample locations

Refer to Figure 2-4 for the locations of the soil samples. Refer to Table 2-3 for sample designations, sampling depth intervals, and analytical results.

Six judgmental samples were collected from borings EV-JS-01 and EV-JS-02 within the footprint of the former impoundment that were drilled to total depths of 9 and 8 ft, respectively. The sample depth intervals in both borings ranged between 0 to 7 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-3. **Note:** During the time that boring locations were surveyed, the marking stake at EV-JS-02 was missing. The location was reestablished by memory utilizing aerial photos and then surveyed using GPS technology. Therefore, the GPS coordinates are estimated, and a qualifier has been placed on the boring log notifying as such.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The Work Plan proposed collecting 12 soil samples from two judgmental sample locations; however, only six soil samples were collected from two judgmental sample locations because the depth to bedrock was less than anticipated in the Work Plan.

2. At both boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.
3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g.,

sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

4. The GPS location for boring EV-JS-02 was noted as approximate in the boring log, because the location stake was missing at the time of the survey. The sample location was reestablished by memory using aerial photos and then resurveyed using GPS.

2.9.3 Characterization Results

The following discussion is based on results of the 2008 VRP investigation. Analytical results are presented on Table 2-3. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.9.3.1 Physical Characteristics

Two soil borings within the footprint of the Former Evaporation Pond were advanced into the underlying granodiorite bedrock. Bedrock was encountered at 7 and 8 ft bgs in borings EV-JS-01 and EV-JS-02, respectively. The overlying soils generally consisted of loose silty sands with layers of cobble-size fill material.

2.9.3.2 Soil Samples

Six soil samples were collected from two locations within the Former Evaporation Pond area. No COIs were detected at concentrations exceeding the nr-SRLs or GPLs.

2.9.4 Former Evaporation Pond Subarea Summary

No COIs were detected above the nr-SRLs or GPLs in the soil samples collected from boring locations (EV-JS-01 and EV-JS-02) in the Former Evaporation Pond area.

2.10 Old D Pond Subarea

The Old D Pond subarea is located in the central portion of the Sierrita property between the Former CLEAR Plant and Former Esperanza Mill subareas (Figures 1-2 and 2-5). The APP application shows the Old D Pond located in the southern portion of the Former CLEAR Plant area. However, a recent interview and review of an aerial photograph dated 1979 (Cooper, 1979) in conjunction with a visual site inspection, indicate that the Old D Pond was actually located approximately 1,000 feet south of the Former CLEAR Plant. During the site reconnaissance URS noted an impoundment south of the Former CLEAR Plant and a concrete sump was noted in the footprint of the former impoundment. Former employees reported that this pond was used into

the 1990s, and is assumed to be the actual Old D Pond. The Old D Pond is not an APP-regulated facility.

2.10.1 Subarea Description

The Old D Pond was constructed in 1974 and reportedly received process solutions from the Former CLEAR Plant operation. As described in the 2008 VRP Investigation Work Plan, solutions were recycled and may have contained various constituents including metals and radionuclides. The Old D Pond listed in the APP as a facility "to be closed" at final mine closure has been determined to be the Former E Pond. It is Sierrita's intent to maintain the terminology of "Old D Pond" and adjust its location to what is now believed to be the actual location of Old D Pond.

The Old D Pond is located south of the Former CLEAR Plant in a topographically low area. The Old D Pond receives surface runoff from natural drainage features trending southeast along the north side of Duval Mine Road. A small earthen dam forms the east side of the pond, and provides a (wash) crossing for the dirt road that runs north from Duval Mine Road. Bedrock is present at roughly 7 ft bgs, overlain by alluvial sediments. The area surrounding the Old D Pond supports a healthy cover of native vegetation.

2.10.2 2008 VRP Investigation

URS collected the following samples to characterize the Old D Pond:

- 8 soil samples (including 1 duplicate) from soil borings at 3 judgmental (JS) sample locations
- 12 sediment (SD) samples from borings at 6 sediment sample locations

Refer to Figure 2-5 for the locations of the soil and sediment samples. Refer to Table 2-4 for sample designations, sampling depth intervals, and analytical results.

The three judgmental soil borings (OD-JS-01, OD-JS-02, and OD-JS-03) were advanced to the top of bedrock within the footprint of the Old D Pond. A total of eight (including one duplicate) soil samples were collected from the three borings. The sample depth intervals ranged between 0 to 7 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-4. The deepest soil sample collected was from 7 ft bgs at sample location OD-JS-02.

Sediment samples were collected to evaluate an unnamed wash originating at the Former CLEAR Plant area. Six sediment sample locations (OD-SD-01 through OD-SD-06) were

established in the drainage in the vicinity of the Old D Pond. Two soil samples were collected from each boring at depth intervals from 0 to 1.5 and 1.5 to 3 ft bgs.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The Work Plan proposed collecting 12 soil samples from two judgmental sample locations; however eight soil samples (including one duplicate) were collected from three judgmental sample locations because the depth to bedrock was less than anticipated in the Work Plan.
2. One judgmental sample location (OD-JS-03) was added to characterize the centermost portion of Old D Pond.
3. At some boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.
4. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

2.10.3 Characterization Results

The following discussion is based on results of the 2008 VRP investigation. Analytical results are presented on Table 2-4 and summarized on Figure 2-6. Figure 2-6 only shows sample results for borings with concentrations greater than the nr-SRL or GPL. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.10.3.1 Physical Characteristics

Three soil borings within the footprint of the Old D Pond were advanced to the top of the underlying granodiorite bedrock. Bedrock was encountered between 2 and 9 ft bgs with the deeper bedrock depth occurring along the south edge of the pond. The soils overlying bedrock generally consisted of loose silty sands with layers of cobble-sized fill material.

2.10.3.2 Soil Samples

Eight soil samples (including one duplicate) were collected from three locations within the footprint of the Old D Pond. The surface soil sample collected from a depth of 0 to 1 ft bgs at

boring OD-JS-03 had an arsenic concentration (10.6 mg/kg) that slightly exceeded the nr-SRL (10 mg/kg). Arsenic concentrations in the other soil samples collected within the Old D Pond were significantly less than the nr-SRL. Additionally, arsenic concentrations in all collected soil samples were less than the GPL.

2.10.3.3 Sediment Samples

Twelve sediment samples were collected from six borings along the unnamed drainage and adjacent to the Old D Pond. Four locations were sampled upstream and two locations were sampled downstream of the Old D Pond. No COIs were detected at concentrations greater than their respective nr-SRLs or the GPLs.

2.10.4 Old D Pond Subarea Summary

Arsenic was detected at a concentration that slightly exceeded the nr-SRL but less than the GPL in the soil sample collected from 0 to 1 foot bgs at location OD-JS-03. At the same location, primary and duplicate samples were collected at 1 to 3 ft bgs. The detected concentrations of arsenic in both the primary and duplicate samples were less than the nr-SRL and GPL. None of the other judgmental samples collected within the footprint of the Old D Pond had COIs concentrations greater than their respective nr-SRLs or GPLs.

2.11 Former Esperanza Mill Subarea

The Former Esperanza Mill subarea is located in the central portion of the Sierrita property (Figures 1-2 and 2-7). The Former Esperanza Mill subarea comprises an area of roughly 128 acres. The Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard subareas are located within the Former Esperanza Mill subarea as illustrated on Figure 2-7. The Former Esperanza Mill is an inactive area of historical operations that is not an APP-regulated facility. The Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard are discussed in Sections 2.12, 2.13, and 2.14, respectively.

2.11.1 Subarea Description

Information regarding the Former Esperanza Mill was obtained through interviews with current and former employees and a review of historical aerial photographs. An aerial photograph from 1959 (Cooper, 1959) shows the location of the former mill, thickeners, and ponds that were associated with the former mill operations. The Former Esperanza Mill processed sulfide ore from 1959 through 1981 (HGC 2008). No information has been found regarding specific processing methods. The former operations included a mill, two thickeners, and a raw water pond. Tailing from the Former Esperanza Mill was conveyed via pipeline to the Esperanza

Tailing Impoundment located 1/2-mile southeast of the Former Esperanza Mill. Figure 2-7 illustrates the locations of features and former impoundments that were identified on historical aerial photographs.

The topography of the Former Esperanza Mill subarea slopes gently to the east-southeast. Much of the area has been disturbed by grading to facilitate historical and current mine-related activities and easements. The Former Esperanza Mill subarea is bordered by Amargosa Wash on the south and Demetrie Wash on the east. Duval Canal Extension trends west to east along the north side of the former mill area. The northwestern portion of the area is cut into bedrock with fill extending eastward. A drainage channel (topographic low) extends from near the base of the former thickeners and trends southeast across the former mill area.

Numerous work/storage shops and office buildings along with equipment storage areas are located in the northwest portion of the Former Esperanza Mill subarea. The remaining, and largest portion of the Former Esperanza Mill subarea consists of disturbed areas (cut and fill) within rock outcrops and washes. A sparse cover of native vegetation is present in the undisturbed area.

2.11.2 2004 HGC Investigation

The following soil samples were collected during a 2004 investigation at the Former Esperanza Mill area:

- 9 surface soil samples from 9 locations (EM)
- 6 subsurface soil samples from 2 trenches (EM-T)

2.11.3 2008 VRP Investigation

URS collected the following samples to further characterize the Former Esperanza Mill subarea:

- 26 random grid soil samples from soil borings at 9 locations
- 2 soil samples from 1 judgmental (JS) sample location

Refer to Figure 2-7 for the locations of the soil samples. Refer to Table 2-5 for sample designations, sampling depth intervals, and analytical results.

Grid soil samples (EM-C22, EM-E24, EM-G27, EM-H22, EM-K24, EM-M26, EM-N29, EM-P24, and EM-X26) were collected from nine randomly selected nodes on a 200-foot grid applied to the roughly 128 acres that constitute the Former Esperanza Mill subarea. The sample depth

intervals ranged from 0 to 1 to 10 to 11 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-5.

Judgmental soil samples were also collected from boring EM-JS-01 at depth intervals of 0 to 1 and 1 to 3 ft bgs. Boring EM-JS-01 was added to the soil characterization program based on field observations of visual surface soil staining and discoloration.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The Work Plan initially proposed collecting 60 soil samples from 10 grid sample locations; however, only 26 samples were collected from nine grid sample locations because the depth to bedrock was less than anticipated. The tenth grid boring was drilled in the Former C Pond and C Pond Spoils subarea (See Section 2.12). One judgmental soil boring (EM-JS-01) was added in the Former Esperanza Mill subarea based on field observation of surface soil staining. Two soil samples were collected at depth intervals of 0 to 1 and 1 to 3 ft bgs in judgmental boring EM-JS-01.

2. In all boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.

3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

2.11.4 Characterization Results

The following discussion includes results from the 2004 investigation and the 2008 VRP investigation. Analytical results are presented on Table 2-5 and summarized on Figure 2-8. Figure 2-8 only shows sample results for borings with concentrations greater than the nr-SRL or GPL. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.11.4.1 Physical Characteristics

Nine random and one judgmental soil borings in the Former Esperanza Mill subarea were advanced to the underlying granodiorite bedrock. Bedrock was encountered at a depth of 3.5 to 12 ft bgs. Surface elevations in the area are variable with most areas having been disturbed by

excavation or filling activities. Materials overlying bedrock generally consist of fill or sandy silts to silty sands.

2.11.4.2 Soil Samples

A total of 43 soil samples were collected from 21 locations across the Former Esperanza Mill subarea. The most commonly detected metal exceeding the nr-SRL is arsenic. Arsenic concentrations ranged from 1.1 to 101 mg/kg. Antimony exceeded its GPL in one sample. In addition, chromium was also detected in some samples at concentrations that exceeded the r-SRL for hexavalent chromium. A summary of the results for arsenic and antimony that exceeded the nr-SRLs or GPLs are shown on Figure 2-8.

Arsenic was detected at concentrations greater than the nr-SRL (10 mg/kg) in eight soil samples collected from eight sample locations. Seven of the samples that exceeded the nr-SRL were collected from a depth interval of 0 to 1 ft bgs. Five of these samples, including sample EM-17 which had the highest arsenic concentration (101 mg/kg) were collected during the 2004 HGC investigation from a depth interval of 0 to 0.25 ft bgs. Only one sample from below 1 ft bgs exceeded the nr-SRL; it was collected from trench EM-T-3 at a depth 4 ft bgs. The GPL (290 mg/kg) for arsenic was not exceeded in any of the samples.

Antimony was detected in one soil sample (EM-17) from a depth interval of 0 to 0.25 ft bgs at a concentration (69 mg/kg) greater than the GPL (35 mg/kg). None of the other antimony results exceeded the GPL. The nr-SRL (410 mg/kg) for antimony was not exceeded in any of the samples.

Chromium was detected in majority of the soil samples. Three samples contained chromium at concentrations ranging from 33 to 90 mg/kg exceeding the r-SRL screen for hexavalent chromium (30 mg/kg). These three samples were collected during the 2004 HGC investigation in which the chromium concentrations were significantly less than the r-SRL and nr-SRL for total chromium established at that time of 2,100 and 4,500 mg/kg, respectively. Therefore, none of these samples were analyzed for hexavalent chromium. However, when examining other subareas where hexavalent chromium analysis was performed on selected soil samples with total chromium ranging from 33 to 193 mg/kg (See Sections 2.13.4.2 and 2.14.4.2); hexavalent chromium was not detected in these samples above reporting limits. Therefore, considering that hexavalent chromium has not been used at the Sierrita site and is not likely to be stable in the geochemical environment of the surface and shallow subsurface soils, it is assumed that trivalent chromium is the most likely form of chromium present at the site. Given these considerations, the soil chromium results were compared to the trivalent chromium nr-SRL (1,000,000 mg/kg) in

this report. None of the reported chromium concentrations in all collected soils samples exceeded the nr-SRL for trivalent chromium. Additionally, none of the reported chromium concentrations exceeded the GPL (590 mg/kg).

Barium, beryllium, cobalt, copper, lead, manganese, molybdenum, nickel, selenium, thallium, uranium, and zinc were detected in most of the soil samples but at concentrations less than their respective nr-SRL or GPL. Cadmium and mercury were generally not detected above their reporting limits in most of the soil samples.

2.11.5 Former Esperanza Mill Subarea Summary

Arsenic and antimony were the only COIs detected in soil at concentrations that exceeded their nr-SRL and GPL, respectively. The analytical results from the 2004 HGC investigation and the 2008 VRP investigation indicate that arsenic is present in the near surface (0 to 1 ft bgs) soils across the Former Esperanza Mill subarea. Concentrations of arsenic were detected in all 43 samples submitted for analysis, with 8 samples exceeding the nr-SRL. Antimony was only detected in one near surface soil sample at a concentration greater than its GPL. None of the antimony soil results exceeded the nr-SRL.

Arsenic concentrations greater than the nr-SRL appear to be found in near surface soils (0 to 1 ft bgs) or fill debris in an area just south of the Duval Canal Extension. Arsenic concentrations greater than the nr-SRL were not detected in subsurface soils (i.e., below 1 ft bgs) except for one sample collected at a depth of 4 ft bgs at trench location EM-T-3. The other soil samples collected at depth intervals ranging up to 10 to 11 ft bgs had arsenic concentrations less than the nr-SRL and GPL.

2.12 Former C Pond and C Pond Spoils Subarea

The Former C Pond and C Pond Spoils subarea consists of the Former C Pond and C Pond Spoils. The Former C Pond is an inactive, backfilled pond located within the easternmost portion of the Former Esperanza Mill subarea, near the northwest corner of the confluence of Demetrie and Amargosa Washes (Figure 2-9). The Former C Pond measured roughly 550 feet by 550 feet and was approximately 7.14 acres in area. During operations, sediments that accumulated in the Former C Pond were periodically removed using a dredge line and the dredged spoils were placed on the east and west sides of the current Duval Canal Extension. These spoils were placed in an area referred to as the C Pond Spoils. The Former C Pond and C Pond Spoils subarea is not an APP-regulated facility.

2.12.1 Subarea Description

Information regarding the Former C Pond and C Pond Spoils was obtained through interviews with current and former employees. The Former C Pond was previously reported to be associated with the Former Esperanza Mill; however, recent interviews indicated that the Former C Pond was not associated with the Former Esperanza Mill but was instead used to collect surface runoff from the Sierrita Mill. According to the 1994 APP application prepared by Errol L. Montgomery & Associates (ELMA) and Dames and Moore (DM) (ELMA/DM, 1994), the Former C Pond was never used as an operations pond nor used to contain fluids from leaching operations. Water retained in the Former C Pond was overflow from the old Duval Canal during storm events and surface runoff from parts of the Former Esperanza Mill subarea. Mill staff reported that the Former C Pond also received surface water runoff from the Sierrita crusher dust collector area. The runoff from the dust collector area contained very fine grained sediment and had a relatively high concentration of copper. Sumps located in the Former C Pond filled with the fine-grained sediment that clogged the pumps. The sumps were periodically excavated to remove sediment buildup and unclog the pumps. The excavated sediment was placed on the ground surface immediately east of the Former C Pond, in an area (Former C Pond Spoils subarea) bounding the current Duval Canal Extension. The construction of the Duval Canal Extension in 1994 eliminated the need for surface water runoff collection in the Former C Pond.

The Former C Pond is located in a topographically flat (level) area at the east end of the Former Esperanza Mill subarea. The topography of the Former Esperanza Mill subarea slopes gently to the east-northeast. Currently, the Former C Pond subarea is being used by Freeport-McMoRan Copper and Gold (Sierrita's parent company) for pilot water treatment plants designed to test technologies for the removal of sulfate from water. One plant has been completed and is fully operational while construction has begun on a second plant. There are plans for an eventual third plant. The Duval Canal Extension and an adjacent road occur along the east side of the Former C Pond, separating it from the C Pond Spoils area. The C Pond Spoils are located within a 404 Mitigation Area and support a dense cover of native vegetation.

2.12.2 2004 HGC Investigation

The following soil samples were collected during HGC's 2004 investigation in the vicinity of the Former C Pond and C Pond Spoils:

- 1 surface soil sample from 1 location (EM-26)
- 2 subsurface soil samples from 1 trench location (EM-T-4)

2.12.3 2008 VRP Investigation

URS collected the following samples to further characterize the Former C Pond and C Pond Spoils:

- 3 random grid soil samples from a soil boring at 1 grid location
- 37 soil samples (including 1 duplicate) from 11 soil borings at judgmental (JS) sample locations

Refer to Figure 2-9 for the locations of the soil samples. Refer to Table 2-6 for sample designations, sampling depth intervals, and analytical results.

Three grid soil samples were collected from a soil boring (EM-U25) that originated from the randomly selected node on the 200-foot grid applied to the Former Esperanza Mill subarea that fell within the boundary of the C Pond Spoils subarea. The sample depth intervals ranged between 0 to 5.5 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-6.

Thirty-seven judgmental soil samples were collected from 11 soil borings (CS-JS-01 through CS-JS-06 and C-JS-01 through C-JS-05) at nine locations identified in the Work Plan plus two additional locations added during the field investigation.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field as follows:

1. The Work Plan proposed collecting 54 soil samples from nine sample locations; however, only 40 samples (including one duplicate) were collected from 12 sample locations because the depth to bedrock was less than anticipated in the Work Plan.
2. Three additional judgmental sample locations (CS-JS-04, CS-JS-05, and CS-JS-06) were added in the C Pond Spoils area. These locations were added because the initial locations (CS-JS-01, CS-JS-02, and CS-JS-03) were not staked within the actual spoils area.
4. In all boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.
3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as “0-1” instead of “00-01”).

2.12.4 Characterization Results

The following discussion includes results from the 2004 HGC investigation and the 2008 VRP investigation. Analytical results are presented on Table 2-6 and summarized on Figure 2-10. Figure 2-10 only shows sample results for borings with concentrations greater than the nr-SRL or GPL. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.12.4.1 Physical Characteristics

Six soil borings within the footprint of the Former C Pond subarea were advanced to the top of the underlying granodiorite bedrock. Bedrock was encountered at depths between 4 and 17 ft bgs. The top of bedrock was deeper to the east and south of the Former C Pond. The soils overlying bedrock generally consist of loose silty sands to sandy silt with occasional layers of cobble-size fill material.

2.12.4.2 Soil Samples

A total of 43 soil samples (including 1 duplicate) were collected from 14 locations across the Former C Pond and C Pond Spoils subarea. Arsenic soil concentrations ranged from 1.2 to 23 mg/kg. Concentrations of lead in soil ranged from 3.5 to 3,740 mg/kg. In some samples, arsenic and lead concentrations exceeded their respective nr-SRLs, and lead exceeded its GPL. In addition, chromium was also detected in one sample at a concentration that exceeded the r-SRL for hexavalent chromium. Figure 2-10 only shows sample results for borings with arsenic and lead concentrations greater than the nr-SRL or GPL.

Arsenic was detected at concentrations greater than the nr-SRL (10 mg/kg) in four (including 1 duplicate) soil samples collected from 3 of 14 sample locations. All four samples that exceeded the arsenic nr-SRL were collected from a depth interval of 0 to 3 ft bgs. The arsenic GPL (290 mg/kg) was not exceeded by any of the sample results.

Lead was detected at a concentration above its nr-SRL (800 mg/kg) in one sample (C-JS-05-01-03) and above its GPL (290 mg/kg) in five samples (CS-JS-01-5-7, C-JS-02-10-11, C-JS-05-0-1, C-JS-05-1-3, and EM-U25-05-5-5.5). The highest lead soil concentration (3,740 mg/kg) was detected in C-JS-05-1-3 at a depth interval of 1 to 3 ft bgs. The sample was collected near an area covered with chipped wood debris. To evaluate the soil lead leachability, SPLP analyses were conducted on three soil samples (C-JS-02-10-11, C-JS-05-0-1 and C-JS-05-1-3) with soil lead concentrations ranging from 376 to 3,740 mg/kg, exceeding the GPL. The highest SPLP lead result was reported for the sample C-JS-05-1-3 at 0.001 milligrams per liter (mg/L), which is less

than the ADEQ aquifer water quality standard (AWQS) of 0.05 mg/L. The SPLP lead result of the other two samples were less than their reporting limits; however, for C-JS-02-10-11 the reporting limit of 0.2 mg/L was greater than the AWQS. The corresponding SPLP lead method detection limit (MDL) for C-JS-02-10-11 at <0.04 mg/L was less than the AWQS. SPLP lead analysis was not conducted for samples CS-JS-01-5-7 and EM-U25-05-5-5.5 as total lead concentrations for these samples were within the range reported in the other three samples where SPLP analyses were performed.

Chromium was detected in majority of the soil samples. One sample CS-JS-01-1-3, collected during the 2008 VRP investigation, contained chromium at a concentration of 37 mg/kg exceeding the r-SRL screen for hexavalent chromium (30 mg/kg). A request for hexavalent chromium analysis was made, but the wrong sample (CS-JS-01-0-1) was analyzed. However, when examining other subareas where hexavalent chromium analysis was performed on selected soil samples with total chromium ranging from 33 to 193 mg/kg (See Sections 2.13.4.2 and 2.14.4.2); hexavalent chromium was not detected in these samples above reporting limits. Therefore, considering that hexavalent chromium has not been used at the Sierrita site and is not likely to be stable in the geochemical environment of the surface and shallow subsurface soils, it is assumed that trivalent chromium is the most likely form of chromium present at the site. Given these considerations, the soil chromium results were compared to the trivalent chromium nr-SRL (1,000,000 mg/kg) in this report. None of the reported chromium concentrations in all collected soils samples exceeded the nr-SRL for trivalent chromium. Additionally, none of the reported chromium concentrations exceeded the GPL (590 mg/kg).

Antimony, barium, beryllium, cobalt, copper, manganese, molybdenum, nickel, selenium, thallium, uranium, and zinc were detected in most of the soil samples but the detected concentrations were less than their respective nr-SRL or GPL. Cadmium and mercury were generally not detected above their reporting limits in most of the soil samples.

2.12.5 Former C Pond and C Pond Spoils Subarea Summary

The eastern half of the Former C Pond and the northern portion of the C Pond Spoils subarea have soil arsenic and lead concentrations that exceed their respective nr-SRL and/or GPL. Arsenic was detected at concentrations greater than the nr-SRL (10 mg/kg) in four (including 1 duplicate) soil samples collected from 3 of 14 sample locations (EM-26, C-JS-05, and CS-JS-05). All four samples that exceeded the arsenic nr-SRL were collected from a depth interval of 0 to 3 ft bgs. The distribution of arsenic in soil appears to be spatially random with the exception that it appears to be found at depths from 0 to 3 ft bgs. The arsenic GPL (290 mg/kg) was not exceeded by any of the sample results.

Lead was detected at a concentration above its nr-SRL (800 mg/kg) in one sample (C-JS-05-1-3) and above its GPL (290 mg/kg) in 5 soil samples in 4 borings (CS-JS-01, CS-JS-02, C-JS-05, and EM-U25) at depths from 0 to 11 ft bgs. The highest lead soil concentration (3,740 mg/kg) was detected in C-JS-05 at a depth interval of 1 to 3 ft bgs. Lead concentrations appear to be random with respect to the location and depth of samples. The reported SPLP leachable lead concentrations in two samples (<0.0005 mg/L and 0.001 mg/L) and the MDL in one samples (<0.04 mg/L) were less than the ADEQ AWQS of 0.05 mg/L and do not appear to pose a threat to groundwater quality.

2.13 Former Raffinate Pond Subarea

The Former Raffinate Pond subarea is an inactive, unlined, and backfilled pond located within the central portion of the Former Esperanza Mill area (Figures 1-2 and 2-11). The Former Raffinate Pond is not an APP-regulated facility.

2.13.1 Subarea Description

Information regarding the Former Raffinate Pond was obtained through interviews with current and former employees and a review of historical aerial photographs. A 1979 aerial photograph (Cooper, 1979) depicts the Former Raffinate Pond immediately southeast of the Esperanza Mill building. The Former Raffinate Pond was irregularly shaped, and measured roughly 600 feet by 660 feet. The pond was previously used for containment of raffinate generated at the Precipitation Plant. Use of the Former Raffinate Pond was terminated when the current Raffinate Pond was constructed. No additional information for the Former Raffinate Pond regarding the years of operation or construction specifics has been located.

The Former Raffinate Pond is located in a low area. The topography of the Former Esperanza Mill area slopes gently to the east-northeast. The Former Raffinate Pond collects surface runoff from the western portion of the Former Esperanza Mill subarea and contains some water most of the year. The central portion of the Former Raffinate Pond supports a well-established cover of vegetation. Granodiorite bedrock crops out at the surface along the southwest side of the Former Raffinate Pond. The north and east sides of the pond are bordered by fill material.

2.13.2 2004 HGC Investigation

The following soil samples were collected during HGC's 2004 investigation at the Former Raffinate Pond:

- 1 surface soil sample from 1 location (EM-9)
- 4 subsurface soil samples from 1 trench (EM-T-1)

2.13.3 2008 VRP Investigation

The following samples were collected in July and August 2008 to further characterize the Former Raffinate Pond:

- 15 soil samples (including 3 duplicates) from soil borings at 5 judgmental (JS) sample locations
- 8 sediment samples (including 4 duplicates) from soil borings at 2 sediment (SD) locations

Please refer to Figure 2-11 for the locations of the soil and sediment samples. Refer to Table 2-7 for sample designations, sampling depth intervals, and analytical results.

Five judgmental soil borings (RA-JS-01 through RA-JS-05) were advanced to the top of bedrock within the footprint of the Former Raffinate Pond. Fifteen soil samples (including 3 duplicates) were collected from the 5 borings. The sample depth intervals ranged between 0 to 7 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-7. The deepest soil samples were collected from 7 ft bgs at borings RA-JS-01 and RA-JS-02.

Sediment samples (RA-SD-01 and RA-SD-02) were collected from two locations to characterize discolored sediments in the bottom of the Former Raffinate Pond. Two samples were collected from each sample location at depth intervals of 0 to 1.5 and 1.5 to 3 ft bgs. Duplicate samples were collected for all four primary sediment samples..

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The Work Plan proposed collecting 30 soil samples from 5 sample locations; however, only 15 (including 3 duplicates) samples were collected from 5 sample locations because the depth to bedrock was less than anticipated in the Work Plan.
2. In some boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.
3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g.,

sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

2.13.4 Characterization Results

The following discussion includes results from the 2004 HGC investigation and the 2008 VRP investigation. Analytical results are presented on Table 2-7 and summarized on Figure 2-12. Figure 2-12 only shows sample results for borings with concentrations greater than the nr-SRL or GPL. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.13.4.1 Physical Characteristics

Five soil borings in the Former Raffinate Pond subarea were advanced to the top of the underlying granodiorite bedrock. Bedrock was encountered between 0 and 7 ft bgs. The soils overlying bedrock generally consisted of loose silty sands with layers of cobble-sized fill material.

2.13.4.2 Soil Samples

A total of 20 soil samples (including 3 duplicates) were collected from 7 locations (RA-JS-01 through RA-JS-05, EM-9, and EM-T-1) across the Former Raffinate Pond subarea. Arsenic concentrations in soil ranged from 1 to 89.7 mg/kg. Concentrations of arsenic in 10 soil samples (including 3 duplicates) exceeded the nr-SRL (10 mg/kg) but were less than the GPL (290 mg/kg). Lead concentrations in soil ranged from 2.81 to349 mg/kg. Two soil samples had lead concentrations of lead greater than its GPL (290 mg/kg) but less than the nr-SRL (800 mg/kg). Copper concentrations in soil ranged between 62 and 88,000 mg/kg. One soil sample had copper concentrations greater than the nr-SRL. Chromium was also detected in two samples at concentrations that exceeded the r-SRL for hexavalent chromium. In addition, the chromium result in sample RA-JS-02-0-1D was reported <50 mg/kg; however this reporting limit exceeded the r-SRL for hexavalent chromium. Figure 2-12 shows sample results for borings with arsenic, lead, and copper concentrations greater than the nr-SRL or GPL.

Arsenic was detected at concentrations greater than the nr-SRL (10 mg/kg) in 10 soil samples (including 3 duplicates) collected from 3 sample locations (RA-JS-01, RA-JS-02, and EM-T-1). All samples with arsenic concentrations greater than the nr-SRL were collected from 0 to 7 ft bgs. The deepest borings encountered refusal at 7 ft bgs at two judgmental sample locations. The GPL (290 mg/kg) for arsenic was not exceeded in any samples.

All soil lead concentrations for samples collected in this subarea were less than the nr-SRL. Lead was detected at concentrations exceeding the GPL (290 mg/kg) in two samples from one location (RA-JS-02). Lead was detected in RA-JS-02-0-1D (a duplicate) and RA-JS-02-1-3 at concentrations of 326 and 349 mg/kg, respectively. The samples were collected from a depth interval of 0 to 3 ft bgs. The lead concentration (137 mg/kg) in the primary sample for the duplicate (RA-JS-02-0-1) was less than the GPL. SPLP lead analysis was performed on RA-JS-02-1-3, the sample that contained the higher lead concentration (349 mg/kg) exceeding the GPL, to determine its lead leachability. The reported lead SPLP concentration was <0.2 mg/L which is above the ADEQ AWQS (0.05 mg/L); however the corresponding MDL was <0.04 mg/L. SPLP lead analysis was not conducted for RA-JS-02-0-1D, since the sample containing the higher lead concentration had been analyzed for SPLP lead.

Copper was detected in one soil sample (a duplicate [RA-JS-02-0-1D]) from a depth interval of 0 to 1 ft bgs at a concentration of 88,000 mg/kg, which exceeds the copper nr-SRL (41,000 mg/kg). The primary sample (RA-JS-02-0-1) had a copper concentration (30,200 mg/kg) less than the nr-SRL. None of the other soil copper results were greater than its nr-SRL. No GPL is established for copper.

Chromium was detected in majority of the soil samples. Two samples, RA-JS-02-5-7 and its duplicate RA-JS-02-5-7D, contained chromium at concentrations of 35 and 33 mg/kg, respectively, exceeding the r-SRL screen for hexavalent chromium (30 mg/kg). The chromium result in sample RA-JS-02-0-1D was reported <50 mg/kg; however this reporting limit also exceeded the r-SRL for hexavalent chromium. Subsequent hexavalent chromium analysis was performed on samples RA-JS-02-5-7 and RA-JS-02-5-7D, and the corresponding results indicated that hexavalent chromium was <8 and < 7 mg/kg, respectively. Hexavalent chromium analysis was not performed on RA-JS-02-0-1D, since the corresponding MDL was <10 mg/kg, which is below the r-SRL for hexavalent chromium. Therefore, considering that hexavalent chromium has not been used at the Sierrita site and is not likely to be stable in the geochemical environment of the surface and shallow subsurface soils, it is assumed that trivalent chromium is the most likely form of chromium present at the site. Given these considerations, the soil chromium results were compared to the trivalent chromium nr-SRL (1,000,000 mg/kg) in this report. None of the reported chromium concentrations in all collected soils samples exceeded the nr-SRL for trivalent chromium. Additionally, none of the reported chromium concentrations exceeded the GPL (590 mg/kg).

Antimony, barium, beryllium, cobalt, manganese, mercury, molybdenum, nickel, selenium, thallium, uranium, and zinc were detected in most of the soil samples but the detected

concentrations were less than their respective nr-SRL or GPL. Cadmium was generally not detected above the reporting limit in most of the soil samples.

2.13.4.3 Sediment Samples

Eight sediment samples (including four duplicates) were collected from two locations (RA-SD-01 and RA-SD-02) along the drainage in the northern portion of the Former Raffinate Pond. A duplicate sample was collected with each primary sample. The samples were collected between 0 and 3 ft bgs. Arsenic was detected above the nr-SRL (10 mg/kg) in every sediment sample at concentrations ranging from 10.1 to 55.1 mg/kg. None of the sediment arsenic concentrations were greater than its GPL (290 mg/kg). No other COIs were detected at concentrations above their respective nr-SRLs or GPLs in the sediment samples.

2.13.5 Former Raffinate Pond Subarea Summary

Arsenic, lead, and copper were the only COIs detected in soil samples at concentration(s) exceeding their nr-SRLs; lead was the only COI detected in soil at concentrations exceeding its GPL. The analytical results from the 2004 investigation and the 2008 URS investigation indicate that arsenic is the most frequently detected COI that exceeds the nr-SRL in soils and sediments in the Former Raffinate Pond subarea. Arsenic was detected in all 28 soil and sediment samples (including 7 duplicates) submitted for analysis, with 18 samples (including 7 duplicates) containing arsenic at concentrations exceeding its nr-SRL. All of the arsenic concentrations were less than its GPL. The lead and copper concentrations greater than their GPL and nr-SRL, respectively, only occurred at one sample location (RA-JS-02) at a depth interval of 0 to 3 ft bgs.

Soils and sediments in the west-central portion of the Former Raffinate Pond contain arsenic at concentrations exceeding its nr-SRL to a depth of at least 7 ft bgs, where the top of bedrock was encountered. Two sediment sample locations, RA-SD-01 and RA-SD-02, were advanced using a hand auger to a target depth of 3 ft bgs. The sediment samples also had arsenic concentrations greater than the nr-SRL to 3 ft bgs.

2.14 Former Laydown Yard Subarea

The Former Laydown Yard is located in the central portion of the Sierrita property within the Former Esperanza Mill subarea (Figures 1-2 and 2-13). The Former Laydown Yard comprises an area of approximately 2 acres. The Former Laydown Yard is an inactive, historical operation that is not an APP-regulated facility.

2.14.1 Subarea Description

Interviews with current Sierrita employees indicate that the Former Laydown Yard was used from the 1960's until the Esperanza Mill was demolished in 2005. During this time period, the Former Laydown Yard was used to store equipment, new drums, and salvage materials from decommissioned site facilities such as the Former Esperanza Mill. A subcontractor removed and salvaged the rusted drums and other equipment. The Former Laydown Yard is currently used by a contractor for their mobile office and a few pieces of mobile equipment

The topography of the Former Laydown Yard slopes gently to the southeast. The Former Laydown Yard appears to be largely fill material. The southeastern extent of the fill material forms a steep slope, at a height of approximately 15 feet. Mill balls and miscellaneous metal debris are still visible within the fill material.

2.14.2 2004 HGC Investigation

The following sample was collected during HGC's 2004 investigation at the Former Laydown Yard:

- 1 surface soil sample at 1 location (EM-20)

2.14.3 2008 VRP Investigation

In July and August 2008, URS collected the following samples to supplement the 2004 data:

- 16 soil samples (including 1 duplicate) from soil borings at 4 judgmental (JS) sample locations

Refer to Figure 2-13 for the locations of the soil samples. Refer to Table 2-8 for sample designations, sampling depth intervals, and analytical results.

Sixteen soil samples (including 1 duplicate) were collected from four judgmental soil borings (EM-JS-02 and EM-JS-06 through EM-JS-08) within the footprint of the Former Laydown Yard. These locations were not included as part of the Work Plan, but were added during the VRP investigation to characterize this newly identified subarea. The sample depth intervals ranged from 0 to 1 to 15 to 16 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-8. The deepest soil samples were collected from 16 ft bgs at boring EM-JS-07.

Deviations from the Work Plan (URS 2008) were made due to actual conditions encountered in the field:

1. The field work at the Former Laydown Yard is a deviation from the Work Plan (URS 2008). All of the collected soil samples are additions to the Work Plan.

2. In all boring locations soils samples were erroneously collected at 0 to 1 and 1 to 3 ft bgs instead of 0 to 1.5 and 1.5 to 3 ft bgs intervals specified in the Work Plan.

3. The last two fields in the sample identifier describing the top and bottom sampled intervals were slightly different from the naming convention in the Work Plan (e.g., sample collected at the interval defined as surface to one foot bgs was labeled as "0-1" instead of "00-01").

2.14.4 Characterization Results

The following discussion is based on results of the 2004 HGC investigation and the 2008 VRP investigation. Analytical results are presented on Table 2-8 and summarized on Figure 2-14. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.14.4.1 Physical Characteristics

Four soil borings were advanced through the Former Laydown Yard fill material to the top of the underlying granodiorite bedrock. The thickness of the fill material appears to range from 3.5 to 15 feet. The top eight feet of fill was characterized as dry, loose, silty sand. Below eight feet the fill material was characterized as black stained silty sand possessing a hydrocarbon odor. Material that appeared to be asphalt was observed in some of the borings.

2.14.4.2 Soil Samples

Seventeen soil samples (including 1 duplicate) were collected from 5 borings within the footprint of the Former Laydown Yard. Arsenic, molybdenum, and lead concentrations in some of the soil samples were greater than their respective nr-SRLs and/or GPLs. Chromium was also detected in four samples at concentrations that exceeded the r-SRL for hexavalent chromium. A summary of the results are listed on Table 2-8 and shown on Figure 2-14. Figure 2-14 only shows sample results for borings with arsenic, lead, and molybdenum concentrations greater than the nr-SRL and/or GPL.

Arsenic was detected in all soil samples at concentrations ranging from 3.4 to 64.8 mg/kg. Arsenic was detected at concentrations greater than the nr-SRL (10 mg/kg) in 11 soil samples collected from 4 borings. Arsenic concentrations exceeding the nr-SRL were found in soils to a

depth of 16 ft bgs in boring EM-JS-07. The arsenic GPL (290 mg/kg) was not exceeded by any of the sample results.

Lead was detected in all soil samples at concentrations ranging from 33.5 to 999 mg/kg. Lead was detected at concentrations above the nr-SRL (800 mg/kg) in one sample from boring EM-JS-08 at a depth interval of 5 to 7 ft bgs, which was also the highest reported soil lead concentration (999 mg/kg). Soil lead concentrations exceeded its GPL (290 mg/kg) in three soil samples (EM-JS-02-1-3, EM-JS-08-5-7, and EM-JS-08-10-12) collected from two borings (EM-JS-02 and EM-JS-08). To evaluate the soil lead leachability, SPLP analyses was conducted on all three soil samples (EM-JS-02-1-3, EM-JS-08-5-7 and EM-JS-08-10-12). The SPLP lead results for EM-JS-08-5-7 and EM-JS-08-10-12 were both <0.0005 mg/L. The SPLP lead results for EM-JS-02-1-3 was <0.2 mg/L, which exceeds the ADEQ AWQS of 0.05 mg/L; however, the corresponding MDL was <0.04.

Molybdenum was detected in all soil samples at concentrations ranging from 8 to 6,830 mg/kg. The highest soil molybdenum concentration (6,830 mg/kg) was detected in EM-JS-07 at a depth interval of 0 to 1 ft bgs. Molybdenum concentrations exceeded the nr-SRL (5,100 mg/kg) in four samples (EM-JS-07-00-01, EM-JS-07-10-12, EM-JS-08-05-07, and EM-20) collected from three locations (EM-JS-07, EM-JS-08, and EM-20). Molybdenum concentrations exceeding the nr-SRL were found in soils to a depth of 12 ft bgs in boring EM-JS-07. No GPL has been established for molybdenum.

Chromium was detected in majority of the soil samples. Four samples contained chromium at concentrations ranging from 36 to 193 mg/kg exceeding the r-SRL screen for hexavalent chromium (30 mg/kg). Subsequent hexavalent chromium analysis was performed on the four sample and the corresponding results indicated that hexavalent chromium was below reporting limits. Therefore, considering that hexavalent chromium has not been used at the Sierrita site and is not likely to be stable in the geochemical environment of the surface and shallow subsurface soils, it is assumed that trivalent chromium is the most likely form of chromium present at the site. Given these considerations, the soil chromium results were compared to the trivalent chromium nr-SRL (1,000,000 mg/kg) in this report. None of the reported chromium concentrations in all collected soils samples exceeded the nr-SRL for trivalent chromium. Additionally, none of the reported chromium concentrations exceeded the GPL (590 mg/kg).

Antimony, barium, beryllium, cadmium, cobalt, copper, manganese, mercury, nickel, selenium, thallium, uranium, and zinc were detected in most of the soil samples but the detected concentrations were less than their respective nr-SRL or GPL.

2.14.5 Former Laydown Yard Subarea Summary

Arsenic, lead, and molybdenum were the only soil COIs detected at concentrations above nr-SRLs in the Former Laydown Yard subarea. Lead was the only soil COI detected above its GPL. Every soil boring advanced through the fill material of the Former Laydown Yard contained at least one soil sample with a COI concentration that exceeded either its nr-SRL or GPL. The random occurrence of these COIs suggests that the fill is not homogenous and may be from various sources. Based on the soil borings it appears that the fill material is laying directly on or very near the bedrock surface.

2.15 Former Rhenium Ponds Subarea

The Former Rhenium Ponds subarea consisted of three parallel impoundments located on the Esperanza Tailing Impoundment (Figures 1-2 and 2-15). The Former Rhenium Ponds are listed as a "to be closed" facility in the APP. The APP reports that the facility will be closed at mine closure under the Mine Closure Reclamation Plan.

2.15.1 Subarea Description

The Former Rhenium Ponds consisted of three impoundments excavated side by side into the surface of the Esperanza Tailing Impoundment. The ponds were used for the storage and evaporation of process solutions from the Rhenium Plant (Montgomery Watson 1999). Each pond measured roughly 380 feet long, 90 feet wide, and 10 to 12 feet deep, and were lined with geosynthetic; however, the integrity of the lining was uncertain (MWH 2005). The operation began in 1981 and continued until 1991.

In 1998 Cyprus Amax closed the impoundments. Closure of these ponds consisted of excavating sediments from the cells and recycling the material on the heap leach stockpiles. The ponds were then backfilled with tailing. In 1999 the area was capped with 12 inches of growth medium and re-vegetated.

The Former Rhenium Ponds are located at the northwest corner of the Esperanza Tailing Impoundment. The topography of the immediate and surrounding area is generally flat (i.e., level) because of the nature of tailing deposition. Surface runoff (if any) would flow east and collect in a slight depression that parallels the road located just south of the Former Rhenium Ponds. The area supports a vegetated cover of native grasses.

2.15.2 Initial Closure Sampling

To verify the 1998 closure, a test pit was excavated into the impoundment area to a depth of 12 ft bgs (MWH 2005). Soil samples were collected on December 20, 2001, every foot throughout the entire depth of the excavation. The soil samples were composited as one sample and submitted for total metals and SPLP analysis. The composite sample was designated as ORP-0118.

2.15.3 2008 VRP Investigation

URS collected the following samples to further characterize the Former Rhenium Pond subarea:

- 12 soil samples (including 2 duplicates) from soil borings at 2 judgmental (JS) locations

Refer to Figure 2-15 for the locations of the soil samples. Refer to Table 2-9 for sample designations, sampling depth intervals, and analytical results.

Twelve (including 2 duplicate) judgmental soil samples were collected from two borings (RP-JS-01 and RP-JS-02) within the footprint of the former impoundment. These borings were drilled to supplement soil data reported in the Supplement to the Aquifer Protection Permit (MWH Americas 2005) from a 12-foot deep test pit. The former Rhenium Ponds were reported to be 10 to 12 feet deep (Montgomery Watson 1999). The VRP soil borings were drilled to a depth of 20 feet to sample and analyze soils within and below the former ponds. Bedrock was not encountered in either of these borings. The soil sample depth intervals ranged from 0 to 1 to 15 to 17 ft bgs. Specific soil sample intervals for each boring are listed on Table 2-9. No monitor wells were installed nor sediment or groundwater samples collected.

2.15.4 Characterization Results

The following discussion is based on results of the 2008 VRP investigation. Analytical results are presented on Table 2-9. Soil boring logs are provided in Appendix A. Laboratory data packages are contained in Appendix B. Data verification and validation results are summarized in Section 3.0 and reported in Appendices C and D, respectively.

2.15.4.1 Physical Characteristics

Two borings, RP-JS-01 and RP-JS-02, were advanced within the footprint of the Former Rhenium Ponds into the underlying soil or tailing. The upper material generally consisted of yellowish-brown silt with sand to silty sand. The deeper materials consisted of well sorted, gray silt with sand.

2.15.4.2 Soil Samples

Twelve soil samples (including 2 duplicates) were collected from two locations (RP-JS-01 and RP-JS-02) in the Former Rhenium Ponds. In addition, one composite soil sample ORP-0118 was collected in 2001 (MWH, 2005). Analysis of these samples did not detect any concentrations of COIs that exceeded the nr-SRLs or GPLs.

2.15.5 Former Rhenium Ponds Subarea Summary

No COIs were detected at concentrations above their respective nr-SRLs or GPLs in the soil samples collected from boring locations RP-JS-01 and RP-JS-02 or during closure (MWH, 2005) in the Former Rhenium Pond subarea.

				Antimony (mg/kg)	Arsenic (mg/kg)	Barium (mg/kg)	Beryllium (mg/kg)	Cadmium (mg/kg)	Chromium (mg/kg)	Cobalt (mg/kg)	Copper (mg/kg)	Lead (mg/kg)	Manganese (mg/kg)	Mercury (mg/kg)	Molybdenum (mg/kg)	Nickel (mg/kg)	Selenium (mg/kg)	Thallium (mg/kg)	Uranium[T2] (mg/kg)	Zinc (mg/kg)

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

BB - Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.

B7 - Target analyte detected in prep/method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.

H - Analysis exceeded method hold time. pH is a field test with an immediate hold time.

H1 - Sample analysis performed past holding time.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

N1 - Trace levels of Arsenic were found in the associated prep blank on a few samples. The blank read 0.0010 mg/L at the instrument. This level should not have affected the sample results significantly.

N1* - The chemist noted that the ICSA samples failed biased high. The values in the samples are greater than 10 times that in the ICSA (0.00066 mg/L).

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

RK - LCSS/LCSSD recovery within acceptance criteria but RPD exceeded the laboratory control limit. Acceptable MS/MSD RPD demonstrates precision.

TA - Analyte is not covered by Arizona licensure program #AZ0102, or ACZ does not maintain ADHS certification for this analyte.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

VC - CCV recovery was above the acceptance limits. Target analyte was not detected in the sample [< MDL].

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

ZI - One LCS was outside the recovery method limits while another LCS was within the recovery limits, RPD is within limits.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

J - Indicates an estimated value.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

B1 - Target analyte detected in prep/method blank at or above the method reporting limit.

B7 - Target analyte detected in prep/method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.

H - Analysis exceeded method hold time. pH is a field test with an immediate hold time.

H1 - Sample analysis performed past holding time.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

N1 - The Lead data has been qualified with the N1 flag on the extended qualifier report. The chemist noted that the associated interferent check sample (ICSA) failed control criteria. However, its level was less than 10 times that found in the samples.

N1* - Trace level of Arsenic were found in the associated prep blank on a few samples. The blank read 0.0010 mg/L at the instrument. This value should not have affected the sample results significantly.

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

TA - Analyte is not covered by Arizona licensure program #AZ0102, or ACZ does not maintain ADHS certification for this analyte.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

ZI - One LCS was outside the recovery method limits while another LCS was within the recovery limits, RPD is within limits.

ZK - Analyte concentration in the blank was less than the lower acceptance limit. Sample concentration is at least ten times greater than the absolute value of the blank concentration.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

BB - Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.

B1 - Target analyte detected in prep/method blank at or above the method reporting limit.

B7 - Target analyte detected in prep/method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.

DA - Sample required dilution due to reactivity.

H - Analysis exceeded method hold time. pH is a field test with an immediate hold time.

H1 - Sample analysis performed past holding time.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

MD - The spike recovery (and spike duplicate RPD, if applicable) was not used for data validation because the concentration of the sample and/or the spike was less than the reporting limit.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

N1 - The chemist noted that Lead failed control criteria in the ICSA sample. The level in the samples is greater than 10 times that in the ICSA. No significant impact would be expected.

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

TA - Analyte is not covered by Arizona licensure program #AZ0102, or ACZ does not maintain ADHS certification for this analyte.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

ZI - One LCS was outside the recovery method limits while another LCS was within the recovery limits, RPD is within limits.

ZK - Analyte concentration in the blank was less than the lower acceptance limit. Sample concentration is at least ten times greater than the absolute value of the blank concentration.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

BB - Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.

B1 - Target analyte detected in prep/method blank at or above the method reporting limit.

B7 - Target analyte detected in prep/method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.

DA - Sample required dilution due to reactivity.

H - Analysis exceeded method hold time. pH is a field test with an immediate hold time.

H1 - Sample analysis performed past holding time.

H3 - Sample was received and analyzed past holding time.

J - Indicates an estimated value.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

MD - The spike recovery (and spike duplicate RPD, if applicable) was not used for data validation because the concentration of the sample and/or the spike was less than the reporting limit.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

N1 - The chemist noted that the associated ICSA sample failed at 0.00096 mg/L. All samples are greater than 10X this level and not impacted.

QD - Reported value is the background-corrected concentration, as described by the method.

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

RL - Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

TA - Analyte is not covered by Arizona licensure program #AZ0102, or ACZ does not maintain ADHS certification for this analyte.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

UJ - Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

ZI - One LCS was outside the recovery method limits while another LCS was within the recovery limits, RPD is within limits.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

BB - Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.

B7 - Target analyte detected in prep/method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.

DA - Sample required dilution due to reactivity.

J - Indicates an estimated value.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

MD - The spike recovery (and spike duplicate RPD, if applicable) was not used for data validation because the concentration of the sample and/or the spike was less than the reporting limit.

M1 - Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

N1 - The chemist noted that the associated interferent check sample (ICSA) failed control criteria. However, its level was less than 10 times that found in the samples.

RD - For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

RL - Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

TA - Analyte is not covered by Arizona licensure program #AZ0102, or ACZ does not maintain ADHS certification for this analyte.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Notes:

[1] ADEQ May 2007 Non-Residential Soil Remediation Level

[2] ADEQ September 1996 Groundwater Protection Level

mg/kg - milligrams per Kilogram

ft bgs - feet below ground surface

Cr III - trivalent chromium

Results in red indicate an exceedance of the non-residential SRL.

Result in **bold** with an * denotes an exceedance of the GPL.

< 0.20 denotes the element was not detected at a concentration above either the method detection limit (2004 data) or the practical quantitation limit (2008 data)

NE - not established

NA - not analyzed

ORP-0118 sample results were not verified since no laboratory report was provided.

MA - Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

M2 - Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.

M3 - The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

RL - Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.

T2 - Cited ADHS licensed method does not contain this analyte as part of method compound list.

ZB - The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ZG - The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.

ZH - Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

3.0 QUALITY ASSURANCE/QUALITY CONTROL

The quality of data collected during the 2008 VRP investigation is dependent upon the quality and thoroughness of field sampling activities. General field operations and practices, and specific sample collection methods, were well planned and carefully implemented. Section 4.0 of the Sierrita VRP Investigation Quality Assurance Project Plan (QAPP; URS 2008) detailed the sample collection procedures and data collection forms to be used for the data gathering activities. All personnel involved with the sampling were properly trained in these procedures as discussed in the QAPP.

3.1 Sample Collection and Preparation Procedures

No changes to the sample collection and preparation procedures provided in the Sierrita VRP Investigation Work Plan (URS 2008) and the QAPP were made during implementation of the work.

3.2 Field Decontamination Procedures

Decontamination procedures were followed as described in the QAPP. All down-hole drilling and dedicated sampling equipment was cleaned with high-pressure hot water prior to arrival on site and between drilling locations.

For most soil sampling a disposable acetate liner was used for each sample collected and therefore decontamination of sampling equipment was not necessary. However, seven soil/sediment samples from three locations in the Former Raffinate Pond were collected with stainless-steel, bucket auger because the former pond was not accessible with the Geoprobe® due to ground conditions. Use of the bucket auger required decontamination between samples since the sampler was reused without the use of liners. Following decontamination of the sampler, an equipment rinsate blank was collected per the QAPP guidelines by pouring reagent grade water over the decontaminated sampler and collecting the resulting rinsate in a sample container. The equipment rinsate sample was analyzed for soil COIs. All results for soil COIs were below levels of analytical detection. The analytical results of the equipment rinsate blank samples are provided in Appendix B

3.3 Field Duplicate Sample Evaluation

Duplicate samples of soil and sediment were collected during the investigation to assess the precision of the sample collection process. Duplicate samples were collected using identical

recovery techniques, and were treated in an identical manner during storage, transportation, and analysis.

A total of 12 soil and sediment duplicates were collected during the 2008 investigation program. These 12 duplicates were collected to represent a total of 200 primary soil and sediment samples. Thus, one duplicate was collected for approximately every seventeenth sample (one duplicate per every 16.67 primary samples). Thus, the VRP Work Plan requirement of one duplicate sample collected and analyzed for every 20 primary samples was satisfied.

A summary of the primary and duplicate soil/sediment/tailing samples collected during the field investigation is provided in Table 3-1. This table also provides an evaluation of the relative percent difference (RPD) between the sample pairs. Relative percent difference is a measure of precision calculated by the following formula:

$$RPD = \frac{|X_1 - X_2|}{X_{avg}} \times 100$$

Where: X1 and X2 are the observed concentration values

X_{avg} is the average concentration, and

$|X_1 - X_2|$ is the absolute value of the difference between observed values

The RPD results were evaluated using USEPA Part IV Inorganic Data Validation Functional Guidelines (USEPA 2008) that were in effect when the duplicate soil data were evaluated in 2009. The RPD qualification criteria used are listed in the table below.

Sample Results	**Non-Aqueous Field Duplicate Qualification Criteria**			
	Both Duplicates ≥ 5 x QL		**One or Both Duplicates < 5 x QL**	
	RPD ≤ 50 %	RPD > 50%	Absolute Difference ≤ 4 x QL	Absolute Difference > 4 x QL
Detects	Acceptable	J Flag	Acceptable	J Flag
Non-Detects	Acceptable	UJ Flag	Acceptable	UJ Flag

QL = quantitation limit

Utilizing the above qualification criteria, the RPD or Absolute Difference exceeded the appropriate acceptance criteria in the following sample sets and corresponding COIs:

- OD-JS-03-1-3 and OD-JS-03-1-3D (arsenic)
- EM-JS-08-1-3 and EM-JS-08-1-3D (lead)
- RA-JS-02-0-1 and RA-JS-02-0-1D (antimony, arsenic, cadmium, chromium, cobalt, copper, lead, manganese, molybdenum, nickel, selenium, and zinc)
- RA-JS-02-1-3 and RA-JS-02-1-3D (antimony, arsenic, copper, lead, molybdenum, and selenium)
- RA-SD-01-0-1.5 and RA-SD-01-0-1.5D (copper and uranium)
- RA-SD-02-1.5-3 and RA-SD-02-1.5-3D (barium)

Consequently, for these six sample sets, appropriate "J" or "UJ" qualifier flag have been placed on the appropriate COI detected and non-detected values, respectively, in all analytical tables in Sections 2.0 and 3.0.

3.4 Performance Evaluation Samples

The Work Plan (URS 2008) suggested that the submission of performance evaluation samples may be required if there were unexpected or unexplained sample results, or if continued quality issues were detected through the data verification/validation process. None of these issues were identified during the sampling effort; therefore, no performance samples were submitted to the laboratory for evaluation.

3.5 Analytical Data Packages

The analytical data packages for the soil and sediment samples are provided in Appendix B.

3.6 Data Verification

One hundred percent of analytical results for soil and sediment samples collected from each boring and hand augering location were verified in accordance with the methods and procedures identified in Section 5.2 of the QAPP (URS 2008). The analytical results of one sample collected from soil cuttings in a roll-off bin labeled as "ROLL OFFS 885 910A" was not verified, since the data was used for waste disposal acceptance for a disposal facility that does not require data to be verified. Data in each of the laboratory work orders was reviewed in accordance with the QAPP-defined criteria, and a data verification memo and summary table was prepared. These

verification memos are provided in Appendix C. All data were determined to be usable, with some of the data qualified per Arizona Data Qualifiers, Revision 3.0, September 20, 2007.

3.7 Data Validation

Level IV validation was performed on 3 of the 28 analytical data packages for the soil sampling effort. Thus, 1 in 9.3 packages were validated; exceeding the 1 in 10 requirement requested by ADEQ in the QAPP review comments. A validation memo was prepared for each analytical data package that was reviewed. These validation memos are provided in Appendix D. All data was determined to usable, with some of the data qualified per Arizona Data Qualifiers, Revision 3.0, September 20, 2007.

4.0 RESULTS EVALUATION

The following sections present an evaluation of the analytical results of the VRP soil and sediment investigation. The subarea characterization data were evaluated by comparing the concentrations of each COI in soil and sediment to its nr-SRL (ADEQ 2007) and soil GPL (ADEQ 1996). The collected data and analytical results were also evaluated with the DQOs established in the QAPP and summarized in Section 1.2 to see if DQOs were satisfied.

The nr-SRL values are risk-based concentrations considered protective of direct contact occupational exposures to chemicals in soil (e.g., soil ingestion, inhalation, and dermal contact). Specifically, nr-SRLs are concentrations in soil that a worker could be exposed to every working day for 25 years without adverse health effects.

Soil GPLs are the maximum constituent concentrations in soil that if leached to groundwater are assumed to be protective of groundwater quality. The GPL is based on the assumption that 100 percent of the leachable fraction of COIs in soil will reach groundwater, regardless of the depth to the aquifer. Therefore, GPLs are a conservative measure of groundwater protection and represent a "worst case" correlation between COIs in the soil and the leachable fraction.

Upon completion of site characterization activities, Sierrita may opt to perform a site-specific risk assessment, rather than rely solely on comparing sampling results to nr-SRLs and GPLs. Sierrita may also perform a site-specific determination of background concentrations for selected constituents (e.g., arsenic).

4.1 Evaluation Methodology

The subarea characterization data were initially evaluated by comparing the concentrations of each COI in soil and sediment directly to its nr-SRL (ADEQ 2007) and soil GPL (ADEQ 1996). This comparison indicated that COI concentrations in soils and sediments in three subareas, the Former E Pond, Former Evaporation Pond, and Former Rhenium Ponds, were less than their respective nr-SRL and GPLs in all samples collected. The comparison also found that COI concentrations in six subareas (Former CLEAR Plant, Former Esperanza Mill, Old D Pond, Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard) were greater than their respective nr-SRL or GPL in at least one sample.

COIs detected at concentrations greater than the nr-SRLs were arsenic (Former Clear Plant, Old D Pond, Former Esperanza Mill, Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard), copper (Former CLEAR Plant and Former Raffinate Pond), lead

(Former CLEAR Plant, Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard), and molybdenum (Former Laydown Yard), as summarized on Table 4-1.

COIs detected at concentrations greater than the GPLs included antimony (Former CLEAR Plant and Former Esperanza Mill) and lead (Former CLEAR Plant, Former C Pond and C Pond Spoils, Former Raffinate Pond, and Former Laydown Yard).

For constituents in each subarea where at least one COI was detected at a concentration greater than its nr-SRL or GPL, the exceedances were further evaluated as follows:

- **Evaluation of the frequency of nr-SRL exceedance.** In accordance with ADEQ (ADEQ, 2003) and federal USEPA risk assessment guidance (USEPA, 1989), long term exposures are estimated using the 95 percent upper confidence limit (95UCL) of the mean concentration for each chemical within each exposure area. Risk calculations are based on an estimate of average exposure concentration over time, not the maximum concentration. Therefore, if the 95UCL is less than the nr-SRL and the frequency that the nr-SRL is exceeded is low, there is no human health risk at a site.
- **Evaluation of the magnitude of nr-SRL exceedance.** In some cases, there may be a concern that concentrations significantly greater than an nr-SRL level may require further evaluation, even if the 95UCL is below the nr-SRL.
- **Evaluation of GPL exceedance**. Similar to the nr-SRL evaluation, the GPL exceedances were compared with the 95UCL of the mean. ADEQ guidance also allows the use of alternative GPLs which are based on the ratio between the total metals concentration and the leachable fraction determined using SPLP analysis.

4.2 Evaluation of Sites with nr-SRL Exceedances

Per EPA guidance, risk-based screening levels are used to identify those sites requiring further evaluation. Exceedance of risk-based screening levels does not indicate inherent risk at a site, but suggests that further evaluation of the site's COI concentrations is necessary. This section discusses the results of the evaluation of the direct contact pathway for subareas where nr-SRLs are exceeded.

The most likely potential exposures to COIs in soil are through direct contact by site workers. The Former CLEAR Plant, Former Esperanza Mill Area, Former C Pond and C Pond Spoils, Old D Pond, Former Raffinate Pond, and the Former Laydown Yard were further evaluated because nr-SRLs were exceeded in at least one sample at each of these sites.

The soil and sediment data were further evaluated by calculating the 95UCL on the mean using surface soil data for each subarea. For risk assessment purposes, the ADEQ (Hanley 2010) considers surface soils to occur from 0 to 15 ft bgs. Soils below 15 ft bgs are considered subsurface soils (Hanley 2010). The 95UCL were calculated using ProUCL Version 4 (EPA 2007). Table 4-2 and the following bullets summarize the results of this evaluation.

- **Former CLEAR Plant Subarea**– Arsenic, copper, and lead were detected at concentrations in soil that exceeded the nr-SRL. The maximum arsenic concentration is 16.6 times greater than the nr-SRL, and exceeded the nr-SRL in 22 (24 percent) of the samples collected in the subarea. In addition, the 95UCL of 19.73 mg/kg, calculated exceeded the nr-SRL of 10 mg/kg. Therefore, arsenic is tentatively identified as a constituent of potential concern (COPC) at the Former CLEAR Plant.

  Copper and lead concentrations exceeded the nr-SRL, ranging from four samples (4 percent) to two samples (2 percent), respectively. The maximum copper and lead concentrations exceeded the nr-SRL by a factor of 2.7 and 2.3, respectively. The calculated 95UCL values for copper and lead were below their respective nr-SRLs (Table 4-2). Therefore, copper and lead are not present at concentrations in soil and sediment that represent a health risk for non-residential populations in the Former CLEAR Plant subarea and are not considered COPCs.

- **Former Esperanza Mill Subarea** – Arsenic concentrations in soil at the Former Esperanza Mill subarea exceeded its nr-SRL (Table 4-2). The maximum arsenic concentration is one order of magnitude (10.1 times) greater than the nr-SRL, and exceeded the nr-SRL in eight (19 percent) of the samples. The calculated 95UCL (19.35 mg/kg) also exceeded the nr-SRL (10 mg/kg; Table 4-2). Therefore, arsenic is tentatively identified as a COPC in the Former Esperanza Mill Area subarea.

- **Old D Pond Subarea** – A single arsenic result (10.6 mg/kg) slightly exceeded its nr-SRL (10 mg/kg). The arsenic nr-SRL was exceeded in 1 (5 percent) of the samples collected in the subarea. The 95UCL value (4.38 mg/kg) calculated for arsenic is below the nr-SRL (10 mg/kg; Table 4-2). Therefore, arsenic is not present in soil in this subarea at concentrations that represent a health concern for non-residential populations and are not considered COPCs.

- **Former C Pond and C Pond Spoils Subarea** – Arsenic and lead concentrations in soil at the Former C Pond and C Pond Spoils subarea exceeded their respective nr-SRLs. The maximum arsenic concentration exceeded the nr-SRL by a factor of 2.3, and the nr-SRL

was exceeded in four (10 percent) of the samples collected at the Subarea. Lead exceeded the nr-SRL in one sample (2 percent) by a factor of 4.7.

The 95UCL values calculated for arsenic and lead are below the nr-SRLs (Table 4-2). Therefore, neither arsenic nor lead is present in soil in this subarea at concentrations that represent a health concern for non-residential populations and are not considered COPCs.

- **Former Raffinate Pond Subarea** – Arsenic and copper concentrations in soil and sediment at the Former Raffinate Pond subarea exceeded its nr-SRL. The maximum arsenic concentration was nearly one order of magnitude at 9 times greater than the nr-SRL and exceeded the nr-SRL in 18 (64 percent) of the samples. In addition, the calculated 95UCL (38.28 mg/kg) also exceeded the nr-SRL (10 mg/kg). Therefore, arsenic is tentatively identified as a COPC in the Former Raffinate Pond subarea.

  Copper exceeded the nr-SRL in 1 sample (4 percent) by a factor of 2.1. The 95UCL calculated for copper of 16,589 mg/kg was below the nr-SRL of 41,000 mg/kg (Table 4-2). Therefore, copper is not present in soil at the Former Raffinate Pond at concentrations that represent a health risk for non-residential populations. Therefore copper is not considered a COPC.

- **Former Laydown Yard** – Arsenic, lead, and molybdenum concentrations in soil exceeded the nr-SRLs. The maximum arsenic concentration is 6.5 times greater than the nr-SRL and exceeded the nr-SRL in 10 (63 percent) of the samples. In addition, the calculated 95UCL (18.97 mg/kg) also exceeded the arsenic nr-SRL (10 mg/kg). Therefore, arsenic is tentatively identified as a COPC at the Former Laydown Yard subarea.

  Lead and molybdenum exceeded the nr-SRLs by factors of 1.2 and 1.3, respectively. Lead exceeded the nr-SRL in one sample (6 percent); molybdenum exceeded the nr-SRL in four samples (25 percent). The 95UCL values calculated for lead and molybdenum are below their respective nr-SRLs (Table 4-2). Therefore, lead and molybdenum are not present in soil at concentrations that represent a health risk for non-residential populations in the Former Laydown Yard and are not considered COPCs.

4.3 Evaluation of Sites with GPL Exceedances

This section discusses the results of the evaluation of the soil to groundwater migration pathway for subareas where GPLs are exceeded. To evaluate the groundwater migration pathway, COI concentrations in soil were compared to GPLs. Table 4-3 summarizes the COIs detected in soil at concentrations greater than their respective GPLs.

Antimony and lead were the only COIs detected in soil or sediment at concentrations greater than their respective GPLs. Antimony exceeded its GPL in the Former CLEAR Plant and the Former Esperanza Mill subareas. Lead exceeded its GPL in the Former CLEAR Plant, the Former C Pond and C Pond Spoils, Former Raffinate Pond, and the Former Laydown Yard subareas.

As with direct exposure to soil, the 95UCL represents a broader range of the concentrations that would likely leach to groundwater because leaching occurs over a generalized area, not at a single location within a site. The 95UCLs calculated for antimony and lead in all of the subareas were below the GPLs, with the exception of the 95UCL for lead at 348.7 mg/kg in the Former Laydown Yard subarea which was slightly greater than the GPL by about 1.2 times (Table 4-3).

Seven soil samples containing the highest lead concentrations (ranging from 303 to 3,740 mg/kg) were submitted to the laboratory for SPLP extraction and total lead analysis of the resulting leachate. The leachate concentrations of these samples contained lead at concentrations ranging from <0.0005 to <0.2 mg/L. An alternate GPL for lead was calculated using the highest SPLP result of 0.2 mg/L in accordance with *A Screening Method To Determine Soil Concentrations Protective of Groundwater Quality*, (ADEQ 1996). The alternative GPL for lead was calculated at 25,556 mg/kg, well above any detected lead concentrations in soil in any of the subareas. The corresponding equation and inputs used to calculate the alternative GPL are as follows:

Equation: $X_s = (292.9)RC_w$

Where:
- X_s Maximum allowable total metals concentration in soil that achieves protection of groundwater quality
- 292.9 = Constant (mixing cell dimensions, groundwater flow rate and infiltration rate for base case conditions
- R = Ratio between total metal and the TCLP or SPLP result
- C_w = AWQS of the metal (i.e., Lead = 0.05 mg/L)

When performing the calculations, the total and SPLP lead results for sample RA-JS-02-1-3 were used to calculate "R" since it produced the highest value.

4.4 Evaluation of DQOs

Evaluation of the investigation results indicates that the proposed sampling and DQOs were generally satisfied as shown in Table 4-4. The proposed sampling programs identified in the DQOs were satisfied with the following exceptions:

- **Former Esperanza Mill subarea** – Soil samples were collected from 9 random grid and 1 judgmental locations instead of 10 random grid locations specified in the DQOs. The tenth random grid boring was actually drilled in the Former C Pond and C Pond Spoils subarea and one judgmental soil boring (EM-JS-01) was added in the Former Esperanza Mill subarea based on field observation of surface soil staining. This did not impact the DQOs.

- **Former Raffinate Pond subarea** – In addition to collecting soil samples as prescribed in the DQOs, sediment samples were also collected within the bottom of the pond that was not prescribed in the DQOs. Review of the Work Plan (URS, 2008) confirmed that sediment samples were supposed to be collected, which apparently did not get incorporated into the DQOs. The DQOs should be revised to incorporate collection of sediment samples.

- **Rhenium Ponds subarea –** Soil samples were collected from 2 judgmental locations instead of 5 judgment locations prescribed in the DQOs. Review of the Work Plan (URS, 2008) confirmed that soil samples were supposed to be collected at 2 judgmental locations, which is inconsistent with the DQOs. The DQOs should be revised to reflect the proper number of judgmental samples as specified in the Work Plan.

- **Former Laydown Yard subarea** – Since this subarea was discovered during field activities, it was never incorporated into the DQOs. The DQOs should be revised to include this subarea.

The main objective for each subarea to gather data to confirm that there has not been a release of COIs to appropriate soils and sediment were satisfied. Arsenic was identified as a COPC in surface and subsurface soils at the Former CLEAR Plant, Former Esperanza Mill, and Former Raffinate Pond subareas requiring further evaluation. Arsenic was also identified as a COPC in surface and subsurface soils at the Former Laydown Yard subarea and the DQOs will need to be updated to include this site.

4.5 Conclusions and Recommendations

Based on the results and evaluation of the previous investigation conducted by HGC and 2008 VRP investigation conducted by URS, arsenic is the only COI that has been identified as a COPC at the Former CLEAR Plant, Former Esperanza Mill, Former Raffinate Pond, and Former Laydown Yard subareas (Table 4-1). The calculated arsenic 95UCL in these areas exceeded the nr-SRL of 10 mg/kg by relative small orders of magnitude ranging from 1.9 to 3.8. Therefore, in

accordance with Arizona Administrative Codes (AAC) R18-7-204 and R18-7-206, it is recommended that site-specific background concentrations and/or site-specific remediation standards be developed for arsenic, respectively.

In establishing background concentrations, AAC R18-7-204 will require that: 1) Site-specific historical information concerning land use is reviewed; 2) Site-specific sampling of soils unaffected by a release, but having characteristics similar to those of the soils affected by the COPC is completed; and 3) Statistical analysis of the concentrations obtained from analysis of background soil samples be performed using the 95UCL. In establishing site-specific remediation standards, AAC R18-7-206 will require the use of one of the following human health risk assessment methodologies: 1) A deterministic methodology using reasonable maximum exposures to be evaluated for future use scenarios; 2) A probabilistic methodology demonstrating that alternative levels will be no less protective that the 95^{th} percentile upper bound estimate of the distribution; or 3) An alternative methodology commonly accepted in the scientific community.

Table 4-1
Summary of Results and Recommendations

Area of Potential Concern	Soil COPC	nr-SRL Characterization Summary	GPL Characterization Summary	Recommendations
Former CLEAR Plant	Arsenic	Arsenic, copper, and lead were detected in soils at concentrations greater than the nr-SRL. The 95% UCL for copper and lead is less than the nr-SRL. The 95% UCL for arsenic exceeds the nr-SRL.	Antimony and lead were detected in soils at concentrations greater than the GPL. The 95% UCL for both detected COIs is less than the GPL.	Develop site-specific arsenic soil remediation level.
Former E Pond	None	No detected COIs have concentrations greater than the nr-SRLs.	No detected COIs have concentrations greater than the GPLs.	Request no further action determination.
Former Evaporation Pond	None	No detected COIs have concentrations greater than the nr-SRLs.	No detected COIs have concentrations greater than the GPLs.	Request no further action determination.
Old D Pond	None	Arsenic was detected in soil at concentrations that slightly greater than the nr-SRL. The 95% UCL for arsenic is less than the nr-SRL.	No detected COIs have concentrations greater than the GPLs.	Request no further action determination.
Former Esperanza Mill	Arsenic	Arsenic was detected in soil at concentrations greater than the nr-SRL. The 95% UCL for arsenic is greater than the nr-SRL.	Antimony was detected in soils at concentrations greater than the GPL. The 95% UCL concentration for antimony is less than the GPL.	Develop site-specific arsenic soil remediation level.
Former C Pond and C Pond Spoils	None	Arsenic and lead were detected in soils at concentrations greater than the nr-SRL. The 95% UCL for arsenic and lead are less than the nr-SRL.	Lead was detected in soils at concentrations greater than the GPL. The 95% UCL concentration for lead is less than the GPL.	Request no further action determination.
Former Raffinate Pond	Arsenic	Arsenic and copper were detected in soils at concentrations greater than the nr-SRL. The 95% UCL for copper is less than the nr-SRL. The 95% UCL for arsenic is greater than the nr-SRL.	Lead was detected in soils at concentrations greater than the GPL. The 95% UCL concentration for lead is less than the GPL.	Develop site-specific arsenic soil remediation level.
Former Rhenium Pond	None	No detected COIs have concentrations greater than the nr-SRLs.	No detected COIs have concentrations greater than the GPLs.	Request no further action determination.
Former Laydown Yard	Arsenic	Arsenic, lead, and molybdenum were detected in soils at concentrations greater than the nr-SRL. The 95% UCL for lead and molybdenum is less than the nr-SRL. The 95% UCL for arsenic is greater than the nr-SRL.	Lead was detected in soils at concentrations greater than the GPL. The 95% UCL concentration for lead is only slightly greater than the GPL. In addition, the alternative GPL calculated for lead at 25,556 mg/kg is higher than any lead concentrations reported in soil samples.	Develop site-specific arsenic soil remediation level.

Notes
COI - Constituent of Interest
COPC - Constituent of Potential Concern
95% UCL - 95 percent upper confidence limit of the mean
AWQS - Aquifer Water Quality Standards
nr-SRL - non-residential soil remediation level
GPL - groundwater protection level

Table 4-4
Evaluation of Data Quality Objectives

Area of Interest	Potentially Impacted Media	Objective	Proposed Sampling
Former CLEAR Plant	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from CLEAR Plant to soil. **Response** – Gathered data confirmed that arsenic is a COPC requiring further evaluation	Establish a systematic grid with 200 foot centers over the entire plant area. **Response –** Completed. Collect soil samples from the surface to bedrock at 10 random grid locations. **Response** – Completed.
	Surface and subsurface soil	Gather data to further delineate the areas having highest concentrations of COIs. **Response** – Gathered data confirmed that arsenic is a COPC requiring further evaluation	Collect soil samples from the surface to bedrock at 3 judgmental locations having the highest concentrations of COIs. **Response** - Soil samples collected from 4 judgmental sample locations
	Sediment	Confirm that releases of COIs from the CLEAR Plant have not occurred to sediment in drainage channels. **Response** – Confirmed; no releases of COIs have occurred.	Collect sediment samples from 2 locations in each of the five drainage paths. **Response** – Completed.
Former E Pond	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from solutions to subsurface soil. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area. **Response** – Completed.
Former Evaporation Pond	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from process solutions to subsurface soils. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area. **Response** – Completed.
Old D Pond	Subsurface Soil	Confirm that the pond did not release elevated concentrations of COIs from process solutions to subsurface soils. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 2 judgmental locations drilled within the pond area. **Response -** Soil samples collected from 3 judgmental sample locations.
	Sediment	Confirm that releases of COIs from the Old D Pond have not occurred to sediment in drainage channels. **Response** – Confirmed; no releases of COIs have occurred.	Collected sediment samples from 4 locations upgradient and 2 locations downgradient of the pond. **Response** – Completed.

Table 4-4
Evaluation of Data Quality Objectives

Area of Interest	Potentially Impacted Media	Objective	Proposed Sampling
Former Esperanza Mill	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former Esperanza Mill to soil. **Response** – Gathered data confirmed that arsenic is a COPC requiring further evaluation.	Establish a systematic grid with 200-foot centers over the entire plant area. **Response** – Completed. Collect soil samples from the surface to bedrock at 10 random grid locations. **Response –** Soil samples collected from 9 random grid and 1 judgmental locations
Former C Pond	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former C Pond to soil. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the pond area. **Response** – Completed.
Former C Pond Spoils	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Former C Pond Spoils to soil. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 4 judgmental locations drilled within the spoils area. **Response –** Soil samples collected from 1 random grid and 6 judgmental locations.
Former Raffinate Pond	Surface and subsurface Soil	Gather data to confirm that there has not been a release of COIs from Former Raffinate Pond to soil. **Response** – Gathered data confirmed that arsenic is a COPC requiring further evaluation.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the pond area. **Response –** Soil samples collected from 5 judgmental locations. Sediment samples also collected from 2 locations in pond as prescribed in the Work Plan.
Rhenium Ponds	Surface and subsurface soil	Gather data to confirm that there has not been a release of COIs from Rhenium Ponds to soil. **Response** – Confirmed; no releases of COIs have occurred.	Collect soil samples from the surface to bedrock at 5 judgmental locations drilled within the footprint of the former Rhenium Ponds. **Response -** Soil samples collected from 2 judgmental locations as prescribed in the Work Plan.
Former Laydown Yard	Surface and subsurface soil	Not previously established. **Response** – Gathered data confirmed that arsenic is a COPC requiring further evaluation.	Not previously established. **Response -** Soil samples collected from 4 judgmental locations.

Notes: COI – constituent of interest COPC – constituent of potential concern

Project ID: OJ07R9
ACZ Project ID: L70511

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 16, 2008. This project has been assigned to ACZ's project number, L70511. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70511. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 01, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Sue Webber has reviewed and approved this report.

FMI Gold Copper - Sierrita

August 01, 2008

Project ID: OJ07R9
ACZ Project ID: L70511

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 10 soil samples from FMI Gold & Copper - Sierrita on July 16, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70511. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The following anomaly required further explanation not provided by the Extended Qualifier Report:

1. For Arsenic and Selenium LCSS/LCSSD values flagged with an "E6" in the QC Summary, one of the internal standards was out of control limits. No further action was taken since the LCSS samples were within control limits.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Sample Receipt

FMI Gold & Copper - Sierrita
OJ07R9

ACZ Project ID: L70511
Date Received: 7/16/2008
Received By:
Date Printed: 7/16/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 16, 2008. This project has been assigned to ACZ's project number, L70512. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70512. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 26, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

August 26, 2008

Project ID: OJ07R9
ACZ Project ID: L70512

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 18 soil samples from FMI Gold & Copper - Sierrita on July 16, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70512. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. The Selenium data has been qualified with the N1 flag. The chemist noted that the ICSA samples failed biased high. The values in the samples are greater than 10 times that in the ICSA (0.00066 mg/L).

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L70512-01	WG250102	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG249356	Barium, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RK	LCSS/LCSSD recovery within acceptance criteria but RPD exceeded the laboratory control limit. Acceptable MS/MSD RPD demonstrates precision.
	WG249284	Beryllium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Cadmium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Chromium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Cobalt, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG248996	Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250011	Lead, total (3050)	M6020 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG248996	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG249284	Molybdenum, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Nickel, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250011	Selenium, total (3050)	M6020 ICP-MS	N1	See Case Narrative.
		Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Uranium, total (3050)	M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG249284	Zinc, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

		Cadmium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Chromium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Cobalt, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG248996	Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250011	Lead, total (3050)	M6020 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG248996	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG249284	Molybdenum, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Nickel, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250011	Selenium, total (3050)	M6020 ICP-MS	N1	See Case Narrative.
		Uranium, total (3050)	M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG249284	Zinc, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 16, 2008. This project has been assigned to ACZ's project number, L70514. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70514. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 04, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 17, 2008. This project has been assigned to ACZ's project number, L70543. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70543. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 08, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

August 08, 2008

Project ID: OJ07R9
ACZ Project ID: L70543

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 8 soil samples from FMI Gold & Copper - Sierrita on July 17, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70543. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Samples were received outside the EPA recommended temperature of 0-6 degrees C.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 17, 2008. This project has been assigned to ACZ's project number, L70544. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70544. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 08, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Metals Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Uranium, total (3050)	M6020 ICP-MS

Soil Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Solids, Percent	CLPSOW390, PART F, D-98

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Sample Receipt

FMI Gold & Copper - Sierrita
OJ07R9

ACZ Project ID: L70544
Date Received: 7/17/2008
Received By: lcp
Date Printed: 7/18/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 18, 2008. This project has been assigned to ACZ's project number, L70584. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70584. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 04, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Received By:
Date Printed: 7/18/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

ACZ Project ID: L70791

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 29, 2008. This project has been assigned to ACZ's project number, L70791. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70791. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 29, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed
and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Project ID: OJ07R9
ACZ Project ID: L70819

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on July 30, 2008. This project has been assigned to ACZ's project number, L70819. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70819. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 18, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L70819***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L70819-01	WG249896	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250007	Barium, total (3050)	M6010B ICP	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250053	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250007	Nickel, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG249896	Selenium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
L70819-02	WG249896	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250007	Barium, total (3050)	M6010B ICP	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250053	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250007	Nickel, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG249896	Selenium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.

ACZ Project ID: L70819
Date Received: 7/30/2008
Received By:
Date Printed: 7/30/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Project ID: OJ07R9
ACZ Project ID: L70909

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 01, 2008. This project has been assigned to ACZ's project number, L70909. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70909. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 29, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

August 29, 2008

Project ID: OJ07R9
ACZ Project ID: L70909

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 6 soil samples from FMI Gold & Copper - Sierrita on August 1, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70909. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. The Lead data has been qualified with the N1 flag. The chemist noted that Lead failed control criteria in the ICSA sample. The level in the samples is greater than 10 times that in the ICSA. No significant impact would be expected.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 05, 2008. This project has been assigned to ACZ's project number, L70948. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70948. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 11, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

September 11, 2008

Project ID: OJ07R9
ACZ Project ID: L70948

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 12 soil samples from FMI Gold & Copper - Sierrita on August 5, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70948. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. The Lead data has been qualified with the N1 flag on the extended qualifier report. The chemist noted that the associated interferent check sample (ICSA) failed control criteria. However, its level was less than 10 times that found in the samples.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L70948-01	WG250322	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250314	Barium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250322	Lead, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	N1	See Case Narrative.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250314	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Nickel, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG250322	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250314	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 05, 2008. This project has been assigned to ACZ's project number, L70949. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L70949. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 29, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed
and approved this report.

FMI Gold Copper - Sierrita

August 29, 2008

Project ID: OJ07R9
ACZ Project ID: L70949

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 13 soil samples from FMI Gold & Copper - Sierrita on August 5, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L70949. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Some of the Lead data (>= L70949-08) has been qualified with the N1 flag. The chemist noted that Lead failed control criteria in the ICSA sample. The level in the samples is greater than 10 times that in the ICSA. No significant impact would be expected.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(5)	EPA SW-846. Test Methods for Evaluating Solid Waste, Third Edition with Update III, December 1996.
(6)	Standard Methods for the Examination of Water and Wastewater, 19th edition, 1995.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L70949-01	WG250012	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250243	Barium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Chromium, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG250012	Lead, total (3050)	M6020 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250243	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250012	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Uranium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250243	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

Date Received: 8/5/2008
Received By:
Date Printed: 8/5/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Revised Analytical Report

Ned Hall
FMI Gold & Copper - Sierrita
P.O. Box 527
6200 W. Duval Mine Road
Green Valley, AZ 85622-0527

September 25, 2008

Cc: Rick Smith, Steve Vaughn

Project ID: OJ07R9
ACZ Project ID: L71009

Ned Hall:

Enclosed are revised analytical reports for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 07, 2008 and reported on August 28, 2008. Refer to the case narrative for an explanation of the changes. This project was assigned to ACZ's project number, L71009. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71009. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all the requirements of NELAC.

This report should be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 28, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years. Please notify your Project Manager if you have other needs.

If you have any questions, please contact your Project Manager or Customer Service Representative.

FMI Gold Copper - Sierrita

September 25, 2008

Project ID: OJ07R9
ACZ Project ID: L71009

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 11 soil samples from FMI Gold & Copper - Sierrita on August 7, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L71009. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. This project has been revised to correct some sample identifications.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES / NO

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 07, 2008. This project has been assigned to ACZ's project number, L71011. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71011. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 28, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 08, 2008. This project has been assigned to ACZ's project number, L71041. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71041. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 08, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed
and approved this report.

FMI Gold Copper - Sierrita

September 08, 2008

Project ID: OJ07R9
ACZ Project ID: L71041

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 15 soil samples from FMI Gold & Copper - Sierrita on August 8, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L71041. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Some of the Lead data has been qualified with the N1 flag on the extended qualifier report. The chemist noted that the associated ICSA sample failed at 0.00096 mg/L. All samples are greater than 10x this level and not impacted.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ Project ID: L71041
Date Received: 8/8/2008
Received By:
Date Printed: 8/8/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Sample Container Preservation Legend

Abbreviation	Description	Container Type	Preservative/Limits
R	Raw/Nitric	RED	pH must be < 2
B	Filtered/Sulfuric	BLUE	pH must be < 2
BK	Filtered/Nitric	BLACK	pH must be < 2
G	Filtered/Nitric	GREEN	pH must be < 2
O	Raw/Sulfuric	ORANGE	pH must be < 2
P	Raw/NaOH	PURPLE	pH must be > 12 *
T	Raw/NaOH _Zinc Acetate	TAN	pH must be > 12
Y	Raw/Sulfuric	YELLOW	pH must be < 2
YG	Raw/Sulfuric	YELLOW GLASS	pH must be < 2
N/A	No preservative needed	Not applicable	
RAD	Gamma/Beta dose rate	Not applicable	must be < 250 µR/hr

* pH check performed by analyst prior to sample preparation

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

ACZ Project ID: L71083

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 12, 2008. This project has been assigned to ACZ's project number, L71083. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71083. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 02, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(5)	EPA SW-846. Test Methods for Evaluating Solid Waste, Third Edition with Update III, December 1996.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71083***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71083-01	WG250786	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	B7	Target analyte detected in prep / method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.
			M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250723	Copper, total (3050)	M6010B ICP	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250786	Lead, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250723	Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250852	Selenium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250786	Thallium, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Uranium, total (3050)	M6020 ICP-MS	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250723	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 12, 2008. This project has been assigned to ACZ's project number, L71084. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71084. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 04, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71084-01	WG250786	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	B7	Target analyte detected in prep / method blank at or above acceptance limit. Sample value is > 10X the concentration in the method blank.
			M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250723	Copper, total (3050)	M6010B ICP	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250786	Lead, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250723	Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250852	Selenium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250786	Thallium, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Uranium, total (3050)	M6020 ICP-MS	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250723	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

			M6020 ICP-MS	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Thallium, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Uranium, total (3050)	M6020 ICP-MS	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250723	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Metals Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Uranium, total (3050)	M6020 ICP-MS

Soil Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Solids, Percent	CLPSOW390, PART F, D-98

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 13, 2008. This project has been assigned to ACZ's project number, L71134. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71134. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 04, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

L71134-07	WG250829	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Arsenic, total (3050)	M6020 ICP-MS	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250782	Chromium, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250829	Lead, total (3050)	M6020 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250782	Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250829	Uranium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250782	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

Metals Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Uranium, total (3050)	M6020 ICP-MS

Soil Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Solids, Percent	CLPSOW390, PART F, D-98

ACZ Laboratories, Inc.
2773 Downhill Drive Steamboat Springs, CO 80487 (800) 334-5493

Sample Receipt

FMI Gold & Copper - Sierrita

ACZ Project ID: L71134
Date Received: 8/13/2008
Received By: lcp
Date Printed: 8/14/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Sample Container Preservation Legend

Abbreviation	Description	Container Type	Preservative/Limits
R	Raw/Nitric	RED	pH must be < 2
B	Filtered/Sulfuric	BLUE	pH must be < 2
BK	Filtered/Nitric	BLACK	pH must be < 2
G	Filtered/Nitric	GREEN	pH must be < 2
O	Raw/Sulfuric	ORANGE	pH must be < 2
P	Raw/NaOH	PURPLE	pH must be > 12 *
T	Raw/NaOH Zinc Acetate	TAN	pH must be > 12
Y	Raw/Sulfuric	YELLOW	pH must be < 2
YG	Raw/Sulfuric	YELLOW GLASS	pH must be < 2
N/A	No preservative needed	Not applicable	
RAD	Gamma/Beta dose rate	Not applicable	must be < 250 µR/hr

* pH check performed by analyst prior to sample preparation

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

ACZ Project ID: L71174

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 14, 2008. This project has been assigned to ACZ's project number, L71174. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71174. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after September 29, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Inorganic Extended Qualifier Report

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71174***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71174-01	WG250391	Selenium, total	M200.8 ICP-MS	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

No certification qualifiers associated with this analysis

ACZ Laboratories, Inc.

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

ACZ Project ID: L71176

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 14, 2008. This project has been assigned to ACZ's project number, L71176. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71176. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 05, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71176***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71176-01	WG250786	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250723	Copper, total (3050)	M6010B ICP	BB	Target analyte detected in calibration blank at or above acceptance limit. Sample value was > 10X the concentration in the calibration blank.
			M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG250786	Lead, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
	WG250723	Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
	WG250852	Selenium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG250786	Thallium, total (3050)	M6020 ICP-MS	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Uranium, total (3050)	M6020 ICP-MS	M1	Matrix spike recovery was high, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
			M6020 ICP-MS	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG250723	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Received By:
Date Printed: 8/14/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Rick Smith:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on August 28, 2008. This project has been assigned to ACZ's project number, L71473. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71473. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 18, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

S. Habermehl

Scott Habermehl has reviewed
and approved this report.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.
(5)	EPA SW-846. Test Methods for Evaluating Solid Waste, Third Edition with Update III, December 1996.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

FMI Gold & Copper - Sierrita ACZ Project ID: ***L71473***

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L71473-01	WG251542	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Arsenic, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG251301	Barium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Beryllium, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Cadmium, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Nickel, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
			M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG251542	Selenium, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Thallium, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
			M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Uranium, total (3050)	M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.

L71473-09	WG251542	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
			M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Arsenic, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
	WG251301	Barium, total (3050)	M6010B ICP	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
		Beryllium, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Cadmium, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Chromium, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Manganese, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Molybdenum, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
			M6010B ICP	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
		Nickel, total (3050)	M6010B ICP	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
			M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
	WG251542	Selenium, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
		Thallium, total (3050)	M6020 ICP-MS	RA	Relative Percent Difference (RPD) was not used for data validation because the sample concentration is too low for accurate evaluation (< 10x MDL).
			M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
		Uranium, total (3050)	M6020 ICP-MS	RD	For a solid matrix, the duplicate RPD (spike or matrix) exceeded the control limit, which is attributable to the non-homogeneity of the sample.
	WG251948	Zinc, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.

ACZ Project ID: L71473
Date Received: 8/28/2008
Received By:
Date Printed: 8/29/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Are the trip blanks (VOA and/or Cyanide) present?			X
12) Are samples requiring no headspace, headspace free?			X
13) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Samples 11-14 date on the coc was stated as 8/7/08 however on the bottles date was 8/27/08 went with the date on the bottles due to matched the rest of the samples received.

Contact (For any discrepancies, the client must be contacted)

The client was not contacted.

Shipping Containers

Cooler Id	Temp (°C)	Rad (µR/hr)
na6802	2.7	15

Client must contact ACZ Project Manager if analysis should not proceed for samples received outside of thermal preservation acceptance criteria.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐

If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on September 09, 2008. This project has been assigned to ACZ's project number, L71687. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71687. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after October 30, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

(1)	EPA 600/4-83-020. Methods for Chemical Analysis of Water and Wastes, March 1983.
(2)	EPA 600/R-93-100. Methods for the Determination of Inorganic Substances in Environmental Samples, August 1993.
(3)	EPA 600/R-94-111. Methods for the Determination of Metals in Environmental Samples - Supplement I, May 1994.

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on September 11, 2008. This project has been assigned to ACZ's project number, L71753. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L71753. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after November 01, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calivation Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	Analyte was analyzed for but not detected at the indicated MDL

Method References

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ ID	WORKNUM	PARAMETER	METHOD	QUAL	DESCRIPTION
L72198-13	WG253843	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG254012	Barium, total (3050)	M6010B ICP	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG253843	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG254012	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
L72198-14	WG253843	Antimony, total (3050)	M6020 ICP-MS	M2	Matrix spike recovery was low, the recovery of the associated control sample (LCS or LFB) was acceptable.
	WG254012	Barium, total (3050)	M6010B ICP	RL	Recovery for either the LCS or LCS duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
		Cobalt, total (3050)	M6010B ICP	ZG	The ICP Serial Dilution was not used for data validation because the sample concentration was less than 50 times the MDL.
		Copper, total (3050)	M6010B ICP	M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The recovery of the associated control sample (LCS or LFB) was acceptable.
		Molybdenum, total (3050)	M6010B ICP	MA	Recovery for either the spike or spike duplicate was outside of the acceptance limits; the RPD was within the acceptance limits.
			M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.
	WG253843	Thallium, total (3050)	M6020 ICP-MS	ZB	The ICP-MS Serial Dilution was not used for data validation because the sample concentration was less than 100 times the MDL.
	WG254012	Zinc, total (3050)	M6010B ICP	ZH	Serial Dilution exceeded the acceptance criteria. Matrix interference [physical or chemical] is suspected.

Metals Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Uranium, total (3050)	M6020 ICP-MS

Soil Analysis

The following parameters are not offered for certification or are not covered by NELAC certificate #ACZ.

Solids, Percent	CLPSOW390, PART F, D-98

Date Printed: 10/2/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

ACZ Project ID: L72199

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on October 02, 2008. This project has been assigned to ACZ's project number, L72199. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72199. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after November 23, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

ACZ Project ID: L72199
Date Received: 10/2/2008
Received By:
Date Printed: 10/2/2008

Receipt Verification

	YES	NO	NA
1) Does this project require special handling procedures such as CLP protocol?			X
2) Are the custody seals on the cooler intact?	X		
3) Are the custody seals on the sample containers intact?			X
4) Is there a Chain of Custody or other directive shipping papers present?	X		
5) Is the Chain of Custody complete?	X		
6) Is the Chain of Custody in agreement with the samples received?	X		
7) Is there enough sample for all requested analyses?	X		
8) Are all samples within holding times for requested analyses?	X		
9) Were all sample containers received intact?	X		
10) Are the temperature blanks present?			X
11) Is the trip blank for Cyanide present?			X
12) Is the trip blank for VOA present?			X
13) Are samples requiring no headspace, headspace free?			X
14) Do the samples that require a Foreign Soils Permit have one?			X

Exceptions: If you answered no to any of the above questions, please describe

Sample Container Preservation Legend

Abbreviation	Description	Container Type	Preservative/Limits
R	Raw/Nitric	RED	pH must be < 2
B	Filtered/Sulfuric	BLUE	pH must be < 2
BK	Filtered/Nitric	BLACK	pH must be < 2
G	Filtered/Nitric	GREEN	pH must be < 2
O	Raw/Sulfuric	ORANGE	pH must be < 2
P	Raw/NaOH	PURPLE	pH must be > 12 *
T	Raw/NaOH Zinc Acetate	TAN	pH must be > 12
Y	Raw/Sulfuric	YELLOW	pH must be < 2
YG	Raw/Sulfuric	YELLOW GLASS	pH must be < 2
N/A	No preservative needed	Not applicable	
RAD	Gamma/Beta dose rate	Not applicable	must be < 250 µR/hr

* pH check performed by analyst prior to sample preparation

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

YES ☐ NO ☐

Project ID: OJ07R9
ACZ Project ID: L72200

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on October 02, 2008. This project has been assigned to ACZ's project number, L72200. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72200. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after November 22, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

Report Header Explanations

Batch	A distinct set of samples analyzed at a specific time
Found	Value of the QC Type of interest
Limit	Upper limit for RPD, in %.
Lower	Lower Recovery Limit, in % (except for LCSS, mg/Kg)
MDL	Method Detection Limit. Same as Minimum Reporting Limit. Allows for instrument and annual fluctuations.
PCN/SCN	A number assigned to reagents/standards to trace to the manufacturer's certificate of analysis
PQL	Practical Quantitation Limit, typically 5 times the MDL.
QC	True Value of the Control Sample or the amount added to the Spike
Rec	Amount of the true value or spike added recovered, in % (except for LCSS, mg/Kg)
RPD	Relative Percent Difference, calculation used for Duplicate QC Types
Upper	Upper Recovery Limit, in % (except for LCSS, mg/Kg)
Sample	Value of the Sample of interest

QC Sample Types

AS	Analytical Spike (Post Digestion)	*LCSWD*	Laboratory Control Sample - Water Duplicate
ASD	Analytical Spike (Post Digestion) Duplicate	*LFB*	Laboratory Fortified Blank
CCB	Continuing Calibration Blank	*LFM*	Laboratory Fortified Matrix
CCV	Continuing Calibration Verification standard	*LFMD*	Laboratory Fortified Matrix Duplicate
DUP	Sample Duplicate	*LRB*	Laboratory Reagent Blank
ICB	Initial Calibration Blank	*MS*	Matrix Spike
ICV	Initial Calibration Verification standard	*MSD*	Matrix Spike Duplicate
ICSAB	Inter-element Correction Standard - A plus B solutions	*PBS*	Prep Blank - Soil
LCSS	Laboratory Control Sample - Soil	*PBW*	Prep Blank - Water
LCSSD	Laboratory Control Sample - Soil Duplicate	*PQV*	Practical Quantitation Verification standard
LCSW	Laboratory Control Sample - Water	*SDL*	Serial Dilution

QC Sample Type Explanations

Blanks	Verifies that there is no or minimal contamination in the prep method or calibration procedure.
Control Samples	Verifies the accuracy of the method, including the prep procedure.
Duplicates	Verifies the precision of the instrument and/or method.
Spikes/Fortified Matrix	Determines sample matrix interferences, if any.
Standard	Verifies the validity of the calibration.

ACZ Qualifiers (Qual)

B	Analyte concentration detected at a value between MDL and PQL.
H	Analysis exceeded method hold time. pH is a field test with an immediate hold time.
U	The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.

Method References

Comments

(1)	QC results calculated from raw data. Results may vary slightly if the rounded values are used in the calculations.
(2)	Soil, Sludge, and Plant matrices for Inorganic analyses are reported on a dry weight basis.
(3)	Animal matrices for Inorganic analyses are reported on an "as received" basis.

If sample(s) received past holding time (HT), or if insufficient HT remains to complete analysis before expiration, shall ACZ proceed with requested short HT analyses? YES ☐ NO ☐
If "NO" then ACZ will contact client for further instruction. If neither "YES" nor "NO" is indicated, ACZ will proceed with the requested analyses, even if HT is expired, and data will be qualified.

Ned Hall:

Enclosed are the analytical results for sample(s) submitted to ACZ Laboratories, Inc. (ACZ) on October 10, 2008. This project has been assigned to ACZ's project number, L72397. Please reference this number in all future inquiries.

All analyses were performed according to ACZ's Quality Assurance Plan, version 12.0. The enclosed results relate only to the samples received under L72397. Each section of this report has been reviewed and approved by the appropriate Laboratory Supervisor, or a qualified substitute.

Except as noted, the test results for the methods and parameters listed on ACZ's current NELAC certificate letter (#ACZ) meet all requirements of NELAC.

This report shall be used or copied only in its entirety. ACZ is not responsible for the consequences arising from the use of a partial report.

All samples and sub-samples associated with this project will be disposed of after December 06, 2008. If the samples are determined to be hazardous, additional charges apply for disposal (typically less than $10/sample). If you would like the samples to be held longer than ACZ's stated policy or to be returned, please contact your Project Manager or Customer Service Representative for further details and associated costs. ACZ retains analytical reports for five years.

If you have any questions or other needs, please contact your Project Manager.

FMI Gold Copper - Sierrita

November 06, 2008

Project ID: OJ07R9
ACZ Project ID: L72397

Sample Receipt

ACZ Laboratories, Inc. (ACZ) received 18 soil samples from FMI Gold & Copper - Sierrita on October 10, 2008. The samples were received in good condition. Upon receipt, the sample custodian removed the samples from the cooler, inspected the contents, and logged the samples into ACZ's computerized Laboratory Information Management System (LIMS). The samples were assigned ACZ LIMS project number L72397. The custodian verified the sample information entered into the computer against the chain of custody (COC) forms and sample bottle labels.

Holding Times

All analyses were performed within EPA recommended holding times.

Sample Analysis

These samples were analyzed for inorganic parameters. The individual methods are referenced on both, the ACZ invoice and the analytical reports. The extended qualifier reports may contain footnotes qualifying specific elements due to QC failures. In addition the following has been noted with this specific project:

1. Some of the Lead data has been qualified with the N1 flag on the extended qual report. The chemist noted that the associated ICSA QC sample failed at 0.00105 mg/L (TV 0.00100). Samples are greater than 10x the ICSA level, no significant imapct would be expected.
